

Avaya Solution & Interoperability Test Lab

Application Notes for configuring Capita - Secure Solutions and Services Distinction Media Server R1.0 with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.1 using SIP Trunks - Issue 1.0

Abstract

These Application Notes describe the configuration steps for provisioning Capita - Secure Solutions and Services Distinction Media Server to interoperate with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.1.

Readers should pay particular attention to the scope of testing as outlined in Section 2.1, as well as observations noted in Section 2.2 to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration steps for provisioning the Distinction Media Server from Capita - Secure Solutions and Services to interoperate with Avaya Communication Server 1000 R7.6 using Avaya Aura® Session Manager R7.1 to route SIP calls.

In this type of configuration, the Distinction Media Server has a SIP connection to Avaya Aura® Session Manager. The Distinction Media Server supports basic call control including hold, transfer and conference.

2. General Test Approach and Test Results

The interoperability compliance testing evaluates the ability of the Capita - Secure Solutions and Services (Capita) Distinction Media Server (DMS) to make and receive calls to and from CS1000 endpoints. All calls destined for the DMS both locally and from the PSTN are routed to the DMS over SIP trunks using Session Manager to route the calls.

DevConnect compliance testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect compliance testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Avaya recommends our customers implement Avaya solutions using appropriate security and encryption capabilities enabled by our products. The testing referenced in these DevConnect Application Notes included the enablement of supported encryption capabilities in the Avaya products. Readers should consult the appropriate Avaya product documentation for further information regarding security and encryption capabilities supported by those Avaya products.

Support for these security and encryption capabilities in any non-Avaya solution component is the responsibility of each individual vendor. Readers should consult the appropriate vendor-supplied product documentation for more information regarding those products.

For the testing associated with these Application Notes, the interface between Session Manager and the DMS did not include use of any specific encryption features as requested by Capita.

2.1. Interoperability Compliance Testing

The interoperability compliance testing focuses on various technical testing scenarios to verify the usage of DMS with the Avaya solution. In addition, serviceability tests were also performed to assess the reliability and accuracy of the joint solution. The testing focused on the following types of calls:

- **Calls to CS1000 extensions** – Ensure that calls can be made to CS1000 extensions from the DMS.

- **Calls to DMS extensions**– Ensure that calls can be made to the DMS extensions from CS1000 extensions.
- **Calls to PSTN from DMS extensions** - Ensure that calls can be made from the DMS to PSTN across the SIP trunk through the CS1000.
- **Calls from PSTN into DMS extensions** – Ensure that calls can be made to the DMS from the PSTN by calling into the CS1000 and across the SIP trunk to the DMS.
- **Hold/transfer and conference functionality**– Verify that calls can be placed on hold and transferred and conferenced.
- **Serviceability testing** - Verify the behaviour of DMS application under different simulated LAN failure conditions on the Avaya platform.

2.2. Test Results

All Test Cases passed except for the following reported issues.

1. When a DMS phone has Call Forward No Answer set and either a CS1000 extension or another DMS calls to it a “BYE” is sent out by the DMS when the call is forwarded to its CFNA number. This means that CFNA cannot be supported across the DMS system with the CS1000.
2. Issue with call scenario DMS extension (Set A) calls to a CS1000 extension (Set B) and Set B transfers Set A to another DMS extension (Set C), there is no RTP after the transfer is complete. This issue only occurs on Supervised Transfer. The workaround is for the call initiator (Set A) to place Set C on hold and retrieve the call. Once this is done the RTP is established correctly. Capita are aware of this issue.
3. The CLID is not updated correctly after several transfer scenarios. Capita are aware of these issues.
4. Issue when transferring to a busy or invalid extension where the person transferring the call does not get an indication that the person they are transferring to is busy or invalid. Capita are aware of this issue.

2.3. Support

Support from Avaya is available by visiting the website <http://support.avaya.com> and a list of product documentation can be found in **Section 11** of these Application Notes. Technical support for the Capita DMS product can be obtained as follows.

- Tel: + 44 (0) 8456 041999
- Email: csis.info@capita.co.uk

3. Reference Configuration

Figure 1 shows the setup for compliance testing Capita's DMS with CS1000 and Session Manager using SIP signalling over SIP trunks to pass calls between the CS1000 and the DMS extensions.

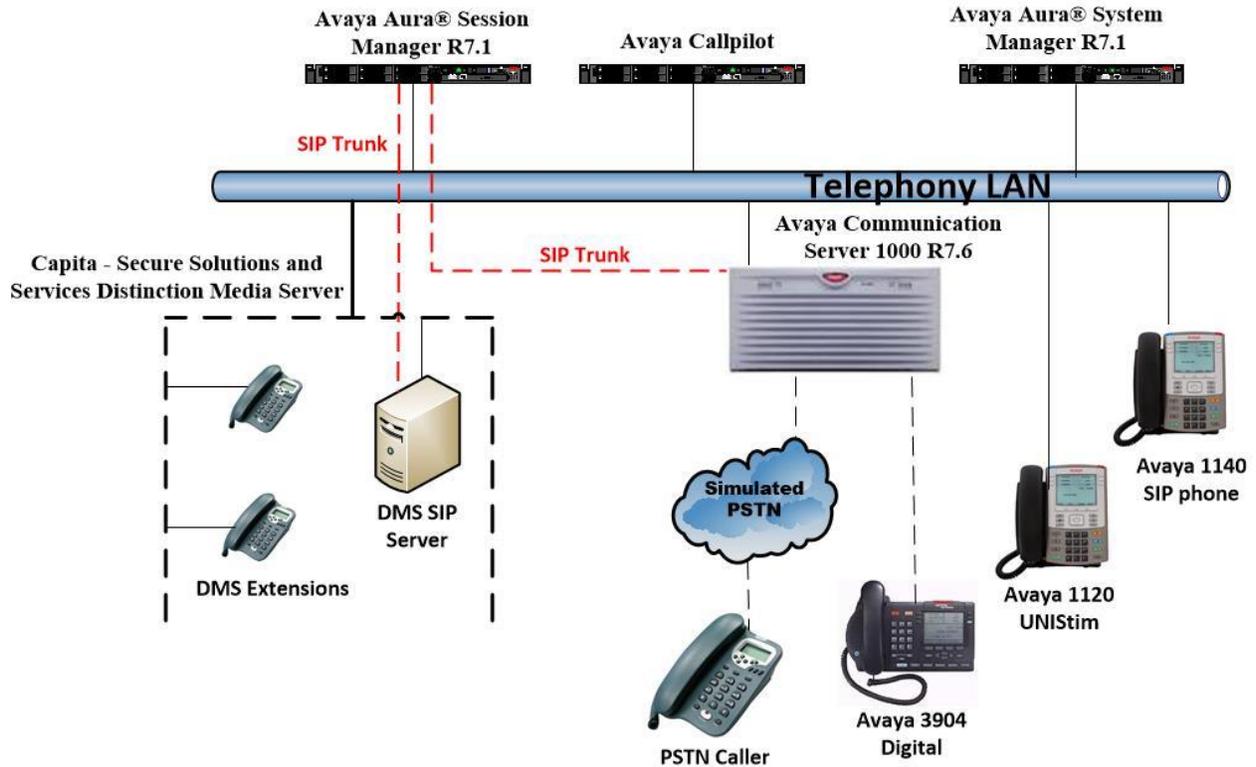

Figure 1: Connection of Capita - Secure Solutions and Services Distinction Media Server with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.1

4. Equipment and Software Validated

The following equipment and software were used for the compliance test.

Avaya Equipment/Software	Release / Firmware Version
Avaya Communication Server 1000 running on CPPM	R7.6 SP10 (See Appendix A for Patch details)
Avaya Aura® System Manager	R7.1.3.0 Build No. 7.1.0.0.1125193 Software Update Version No: 7.1.3.0.037763 Feature Pack 3
Avaya Aura® Session Manager running on a virtual server	Session Manager R7.1 Build No. – 7.1.3.0.713014
Avaya Callpilot running on Avaya Callpilot Server 600r	Release 05.00.41 PEPs installed: CP50041SU08S, CP500S08G09C
Avaya 1120 UNISim	0624C8Q
Avaya 1150 UNISim	0627C8Q
Avaya 1230 UNISim	062AC8Q
Avaya 1140 SIP	04.04.28.00
Avaya 3904 Digital	Core Firmware 024 Flash Firmware 094
Capita Equipment	Software / Firmware Version
Capita Distinction Media Server (DMS)	Release 1.0.0.37

5. Configure Avaya Communication Server 1000

It is assumed that a fully functioning CS1000 is in place with the necessary licensing and with SIP trunks in place to Session Manager. See **Appendix B** for a printout of the SIP route, d-channel, and trunk information. For further information on the configuration of CS1000 please see reference [1] in **Section 11** of these Application Notes. “PuTTY” is used to administer the CS1000. Using PuTTY, open an SSH session to the Node IP address of the CS1000, log in to the CS1000 Linux application using the appropriate credentials and type **cslogin** (not shown) to gain access to the PBX command line.

Note: A simulated PSTN connection was present on the CS1000 in the form of an ISDN connection, the configuration of which is outside the scope of these Application Notes.

5.1. Configure a Dial Plan for Capita DMS

A Coordinated Dial Plan is added to place calls across the SIP trunk to the DMS. Add a Route List Block (**RLB**) to place calls over the SIP route that is already configured on the system. Note that an **RLB** may already be in place but the following procedure shows the addition of a new **RLB**. Enter overlay 86 to configure a new **RLB** by typing **LD 86** at the “>” prompt. A new Route List Index (**RLI**) is added with an **ENTR 0** of that of the SIP route used.

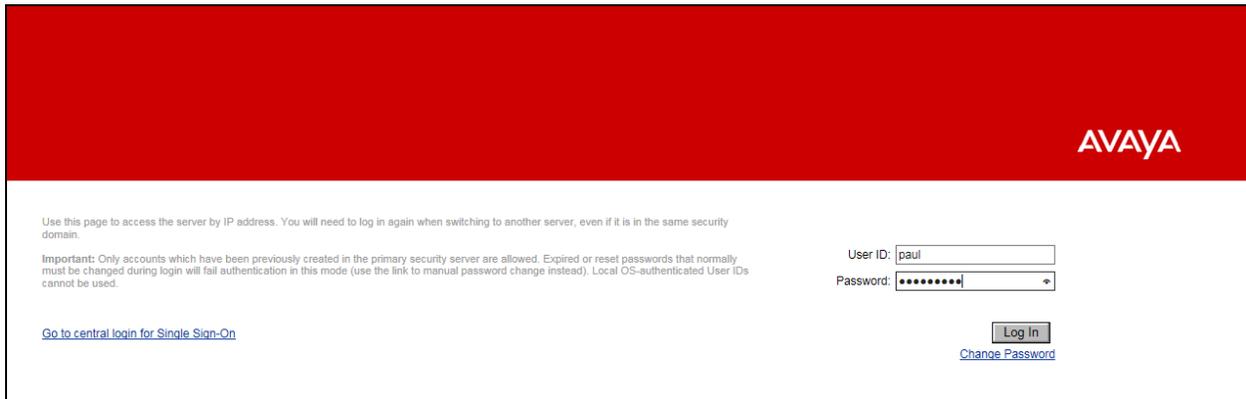

Prompt	Response	Description
>	LD 86	Enter Overlay 86
REQ	new	new/add
CUST	0	Customer number (default is 0)
FEAT	rlb	Route List Block
RLI	10	Route List index Number (any unused number)
ENTR	0	First Entry (0-2)
ROUT	10	Route Number (See Appendix B for info on Route 10)
DMI	0	Digit Manipulation Table (default is 0)
Return to end		

Once the **RLB** is added, the Coordinated Dial Plan (**CDP**) is added in the form of a Distance Steering Code (**DSC**). Note that in the example below, **7080xx** is the **DSC** as this is the extension number used for the DMS during the compliance testing. Enter overlay 87 to add a new **CDP** by typing **LD 87** at the > prompt.

Prompt	Response	Description
>	LD 87	Enter Overlay 87
REQ	new	new/add
CUST	0	Customer number (default is 0)
FEAT	cdp	Coordinated Dial Plan
TYPE	dsc	Distance Steering Code
DSC	7080	Extension number of the DMS Application
FLEN	6	Ext Length
DSP	LSC	DSP Type (Least Cost Routing)
RLI	10	Which RLB to use (Enter the RLB setup above)
Return to end		

6. Configure Avaya Communication Server 1000 Signalling Server

Access to the CS1000 Signalling Server is achieved by logging into System Manager using a Web Browser by entering `http://<FQDN >/SMGR`, or logging directly into the CS1000 Unified Communication Manager (UCM) as is shown below. Log in using appropriate credentials.

The image shows the Avaya login page. At the top right is the AVAYA logo. Below it, there is a login form with fields for User ID (containing 'paul') and Password (masked with dots). There are 'Log In' and 'Change Password' buttons. A small text block provides instructions and important notes about account security.

Use this page to access the server by IP address. You will need to log in again when switching to another server, even if it is in the same security domain.

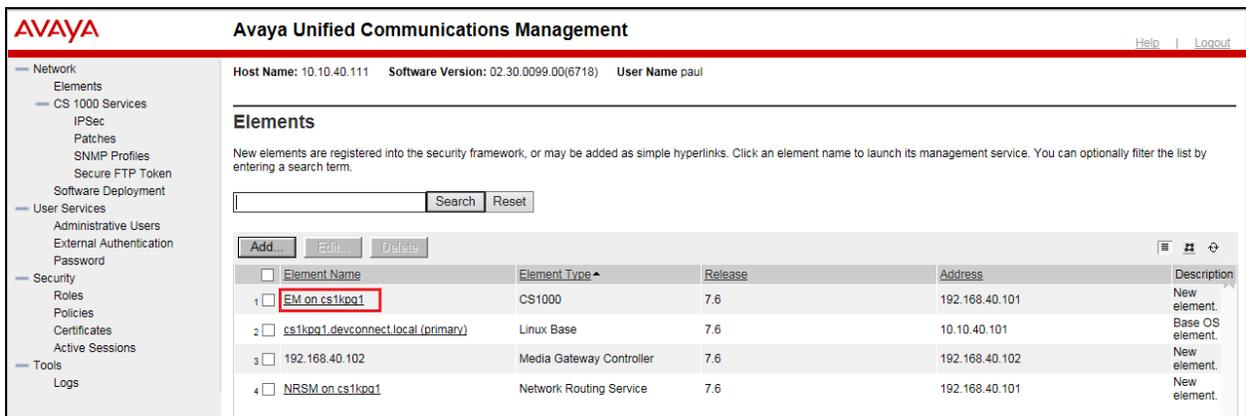

Important: Only accounts which have been previously created in the primary security server are allowed. Expired or reset passwords that normally must be changed during login will fail authentication in this mode (use the link to manual password change instead). Local OS-authenticated User IDs cannot be used.

[Go to central login for Single Sign-On](#)

User ID: paul
Password: [masked]

[Log In](#) [Change Password](#)

The following screen appears showing the various **Elements**, select **EM on cs1kpg** (note this name may appear different depending on the system).

The image shows the Avaya Unified Communications Management interface. The top header includes the AVAYA logo, the title 'Avaya Unified Communications Management', and 'Help | Logout' links. Below the header, there is a navigation menu on the left with categories like Network, User Services, Security, and Tools. The main content area displays the 'Elements' page. It shows a search bar and a table of elements. The first element, 'EM on cs1kpg1', is highlighted with a red box.

Host Name: 10.10.40.111 Software Version: 02.30.0099.00(6718) User Name paul

Elements

New elements are registered into the security framework, or may be added as simple hyperlinks. Click an element name to launch its management service. You can optionally filter the list by entering a search term.

<input type="checkbox"/>	Element Name	Element Type	Release	Address	Description
<input type="checkbox"/>	EM on cs1kpg1	CS1000	7.6	192.168.40.101	New element.
<input type="checkbox"/>	cs1kpg1.devconnect.local (primary)	Linux Base	7.6	10.10.40.101	Base OS element.
<input type="checkbox"/>	192.168.40.102	Media Gateway Controller	7.6	192.168.40.102	New element.
<input type="checkbox"/>	NRSM on cs1kpg1	Network Routing Service	7.6	192.168.40.101	New element.

Navigate to **IP Network** → **Nodes Servers and Media Cards** in the left window and select the Node associated with the CS1000. In the example below this **Node ID** is **111**. Open this node by clicking on **111** highlighted below.

7. Configure Avaya Aura® Session Manager

In order to make changes in Session Manager a web session is established to System Manager. Log into System Manager by opening a web browser and navigating to <http://<System Manager FQDN>/SMGR>. Enter the appropriate credentials for the **User ID** and **Password** and click on **Log On** highlighted below.

Recommended access to System Manager is via FQDN.
[Go to central login for Single Sign-On](#)

If IP address access is your only option, then note that authentication will fail in the following cases:

- First time login with "admin" account
- Expired/Reset passwords

Use the "Change Password" hyperlink on this page to change the password manually, and then login.

Also note that single sign-on between servers in the same security domain is not supported when accessing via IP address.

This system is restricted solely to authorized users for legitimate business purposes only. The actual or attempted unauthorized access, use, or modification of this system is strictly prohibited.

Basically this is Pauls PBX so please go away if you are not Paul.

7.1. Domains and Locations

Note: It is assumed that a domain and a location have already been configured, therefore a quick overview of the domain and location that was used in compliance testing is only provided here.

7.1.1. Display the Domain

Select Domains from the left window. This will display the domain configured on Session Manager. For compliance testing this domain was **devconnect.local** as shown below. If a domain is not already in place, then click on **New** as is highlighted below.

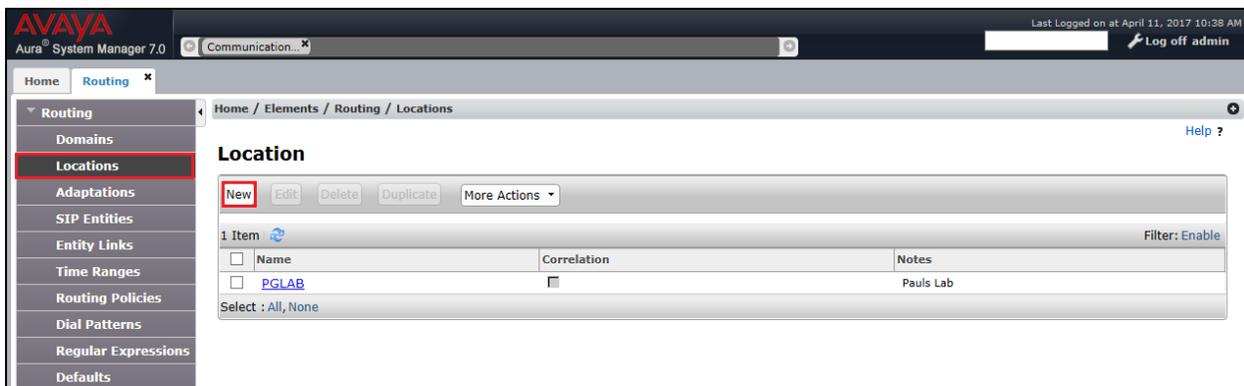

The screenshot shows the Avaya Aura System Manager 7.0 interface. The left navigation pane has 'Domains' selected. The main content area is titled 'Domain Management'. At the top, there are buttons for 'New', 'Edit', 'Delete', 'Duplicate', and 'More Actions'. Below this is a table with one item:

Name	Type	Notes
devconnect.local	sip	Default domain for Paul

Below the table, it says 'Select : All, None'. The 'New' button is highlighted with a red box.

7.1.2. Display the Location

Select Locations from the left window and this will display the location setup. The example below shows the location PGLAB which was used for compliance testing. If a location is not already in place, then one must be added to include the IP address range of the Avaya solution. Click on **New** as is highlighted below to add a new location.

The screenshot shows the Avaya Aura System Manager 7.0 interface. The left navigation pane has 'Locations' selected. The main content area is titled 'Location'. At the top, there are buttons for 'New', 'Edit', 'Delete', 'Duplicate', and 'More Actions'. Below this is a table with one item:

Name	Correlation	Notes
PGLAB		Pauls Lab

Below the table, it says 'Select : All, None'. The 'New' button is highlighted with a red box.

7.2. Adding the Distinction Media Server as a SIP Entity

Click on **SIP Entities** in the left column and select **New** in the right window.

7.4. Adding the Distinction Media Server Routing Policy

Click on **Routing Policies** in the left window and select **New** in the main window.

The screenshot shows the Avaya Aura System Manager 7.0 interface. The left sidebar is expanded to show 'Routing Policies'. The main window displays the 'Routing Policies' configuration page. At the top, there are buttons for 'New', 'Edit', 'Delete', 'Duplicate', and 'More Actions'. Below this is a table with 15 items. The table has columns for 'Name', 'Disabled', 'Retries', 'Destination', and 'Notes'. The 'New' button is highlighted with a red box.

Name	Disabled	Retries	Destination	Notes
To_aacc64SIPvmpg	<input type="checkbox"/>	0	aacc64SIPvmpg	aacc64SIPvmpg
To_AACC70vmpg	<input type="checkbox"/>	0	AACC70vmpg	To_AACC70vmpg
To_ASBCCE	<input type="checkbox"/>	0	ASBCE_PG	Calls to ASBCE
To_Capita	<input type="checkbox"/>	0	Capita	To Capita
To_cm63vmpg	<input type="checkbox"/>	0	cm63vmpg	Routing to CM63
To_CM70_Redundancy	<input type="checkbox"/>	0	CM70Redundancy	To CM70 Redundancy
To_cm70vmpg	<input type="checkbox"/>	0	cm70vmpg	
To_CPE	<input type="checkbox"/>	0	CPE	For Stephen
To_CS1000E	<input type="checkbox"/>	0	CS1000E	Routing to CS1KPG1

Enter a suitable **Name** for the Routing Policy and click on **Select** under **SIP Entity as Destination**.

The screenshot shows the 'Routing Policy Details' form. The 'General' section has the following fields:

- Name:** To Capita - DMS
- Disabled:**
- Retries:** 0
- Notes:** To Capita - DMS

 The 'SIP Entity as Destination' section has a 'Select' button and a table with the following columns:

Name	FQDN or IP Address	Type	Notes

Select the **CAPITA DMS** SIP Entity as shown below and click on **Select**.

7.5. Adding a Dial Pattern for the Distinction Media Server

Select **Dial Patterns** in the left window and select **New** in the main window.

The screenshot shows the Avaya Aura System Manager 7.0 interface. The left sidebar is expanded to show 'Dial Patterns' under the 'Routing' section. The main window displays the 'Dial Patterns' configuration page. At the top, there are buttons for 'New', 'Edit', 'Delete', 'Duplicate', and 'More Actions'. Below these is a table with 17 items. The table columns are: Pattern, Min, Max, Emergency Call, Emergency Type, Emergency Priority, SIP Domain, and Notes. The 'New' button is highlighted with a red box.

Pattern	Min	Max	Emergency Call	Emergency Type	Emergency Priority	SIP Domain	Notes
10	4	4	<input type="checkbox"/>			devconnect.local	Ext 10xx on CM63vmpp
2016	4	4	<input type="checkbox"/>			devconnect.local	SIP Trunk to CM63
3	4	4	<input type="checkbox"/>			devconnect.local	To CS1000E
40	4	4	<input type="checkbox"/>			devconnect.local	Calls to SIP exts in CS1000
450	4	4	<input type="checkbox"/>			devconnect.local	To Capita
49	4	4	<input type="checkbox"/>			devconnect.local	To NovaLink 10.10.40.44
51	4	4	<input type="checkbox"/>			devconnect.local	To Etrali
52	4	4	<input type="checkbox"/>			devconnect.local	Was goign to IP Office 500 V2 Now CM70vmpp
5999	4	4	<input type="checkbox"/>			devconnect.local	Messaging (Voicemail)

Enter the required digits for the Pattern, in the example below 7080xx is used, which means that 708000 – 708099 will use the Routing Policy that will be selected. **7080** is entered as the **Pattern** and the **Min** and **Max** digit length of **6** is used thus giving 7080xx. Ensure that the correct domain is entered for **SIP Domain** in this example the domain created in **Section 7.1.1** is added. Click on **Add** under **Originating Locations and Routing Policies** to select the Routing Policy.

The screenshot shows the 'Dial Pattern Details' configuration page. The 'General' section contains the following fields:

- Pattern:** 7080
- Min:** 6
- Max:** 6
- Emergency Call:**
- Emergency Priority:** 1
- Emergency Type:** (empty)
- SIP Domain:** devconnect.local
- Notes:** To Capita DMS

The 'Originating Locations and Routing Policies' section shows a table with 1 item and an 'Add' button.

Originating Location Name	Originating Location Notes	Routing Policy Name	Rank	Routing Policy Disabled	Routing Policy Destination	Routing Policy Notes

Select the **Originating Location**, this will be the location added in **Section 7.1.2** select the newly created routing policy for the DMS.

8. Configure Capita - Secure Solutions and Services Distinction Media Server

The installation and configuration of the DMS is carried out by an engineer with sufficient training from Capita as it was for compliance testing. An in-depth knowledge of the DMS is required in order to make configuration changes and such changes should only be made by an engineer with this capability, therefore the setup and configuration of the Capita Distinction Media Server is outside the scope of these Application Notes. For information on the setup and configuration of the DMS, please contact Capita as per **Section 2.3**.

9. Verification Steps

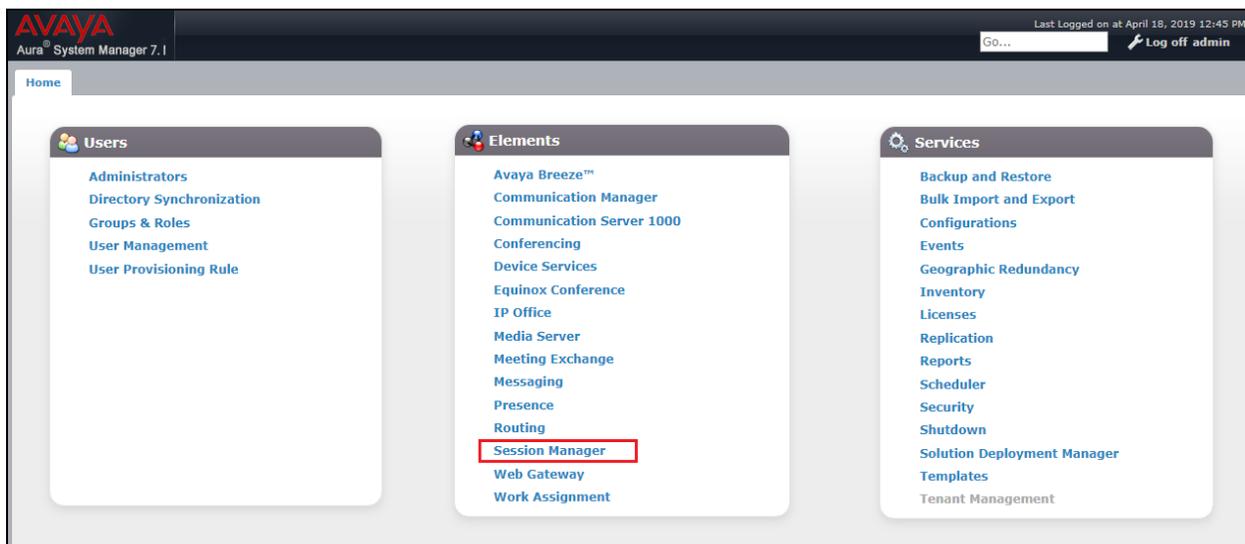

The following steps can be taken to ensure that all connections between Capita's DMS and the Avaya solution are configured correctly.

9.1. Verify that calls can be made to and from the Distinction Media Server

From an Avaya extension make a call to a DMS extension and ensure that the call remains active for more than 40 seconds. From a DMS extension make a call to the Avaya extension and again keep the call active for more than 40 seconds.

9.2. Verify the SIP Entity on Avaya Aura® System Manager

Log into System Manager as per **Section 7**. Under **Elements** click on **Session Manager**.

9.2.1. Verify the CS1000 SIP Entity

Navigate to **SIP Entity Monitoring** in the left window. **All Monitored SIP Entities** are listed in the main window. Click on the CS1000 SIP Entity to check its status.

SIP Entity Link Monitoring Status Summary
This page provides a summary of Session Manager SIP entity link monitoring status.

SIP Entities Status for All Monitoring Session Manager Instances

Run Monitor

1 Item Filter: Enable

Session Manager	Type	Monitored Entities					Deny	Total
		Down	Partially Up	Up	Not Monitored

19 Items Filter: Enable

SIP Entity Name
AAMessagingR7
CM80VMPG
CAPITA DMS
CS1KPG1

Select : All, None

Page 2 of 2

The CS1000 has both a **UDP** and **TCP** connection to Session Manager and both are showing **UP** in the example below.

SIP Entity, Entity Link Connection Status
This page displays detailed connection status for all entity links from all Session Manager instances to a single SIP entity.

Status Details for the selected Session Manager:

All Entity Links to SIP Entity: CS1KPG1

Summary View

2 Items Filter: Enable

	Session Manager Name	IP Address Family	SIP Entity Resolved IP	Port	Proto.	Deny	Conn. Status	Reason Code	Link Status
<input type="radio"/>	SM71vmpg	IPv4	10.10.40.111	5060	TCP	FALSE	UP	200 OK	UP
<input type="radio"/>	SM71vmpg	IPv4	10.10.40.111	5060	UDP	FALSE	UP	200 OK	UP

Select : None

9.2.2. Verify the Distinction Media Server SIP Entity

Navigate to **SIP Entity Monitoring** in the left window. **All Monitored SIP Entities** are listed in the main window. Click on the **CAPITA DMS** SIP Entity to check its status.

The screenshot shows the Session Manager interface. The left sidebar has 'SIP Entity Monitoring' highlighted. The main window title is 'Home / Elements / Session Manager / System Status / SIP Entity Monitoring'. The main content area is titled 'SIP Entity Link Monitoring Status Summary' and includes a 'Run Monitor' button. Below this is a table for 'SIP Entities Status for All Monitoring Session Manager Instances' with 1 item. The table has columns for 'Session Manager', 'Type', and 'Monitored Entities' (Down, Partially Up, Up, Not Monitored, Deny, Total). The row for 'SM71vmpg' shows 14 Down, 0 Partially Up, 5 Up, 0 Not Monitored, 0 Deny, and a Total of 19. Below the table is a 'Select: All, None' option. Further down is a section for 'All Monitored SIP Entities' with 19 items, listing 'AAMessagingR7', 'CM80VMPG', 'CAPITA DMS', and 'CS1KPG1'. A 'Page 2 of 2' indicator is at the bottom right.

The DMS has both a **UDP** connection to Session Manager and this is showing **UP** in the example below.

The screenshot shows the 'SIP Entity, Entity Link Connection Status' page. The title is 'SIP Entity, Entity Link Connection Status' and the subtitle is 'This page displays detailed connection status for all entity links from all Session Manager instances to a single SIP entity.' Below this is a 'Status Details for the selected Session Manager:' field. The main content area is titled 'All Entity Links to SIP Entity: CAPITA DMS' and has a 'Summary View' button. Below this is a table for 'All Entity Links to SIP Entity: CAPITA DMS' with 1 item. The table has columns for 'Session Manager Name', 'IP Address Family', 'SIP Entity Resolved IP', 'Port', 'Proto.', 'Deny', 'Conn. Status', 'Reason Code', and 'Link Status'. The row for 'SM71vmpg' shows IP v4, 10.10.40.122, 5060, UDP, FALSE, UP, 200 OK, and Link Status UP. A 'Select: None' option is at the bottom left.

10. Conclusion

These Application Notes describe the configuration steps required for the Distinction Media Server from Capita - Secure Solutions and Services to successfully interoperate with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.1. Please refer to **Section 2.2** for test results and observations.

11. Additional References

This section references documentation relevant to these Application Notes. The Avaya product documentation is available at <http://support.avaya.com>, where the following documents can be obtained.
