

Avaya Solution & Interoperability Test Lab

Application Notes for configuring IPC Open Trade with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.0 - Issue 1.0

Abstract

These Application Notes describe the configuration steps necessary for provisioning IPC Open Trade to successfully interoperate with Avaya Communication Server 1000 Release 7.6 and Avaya Aura® Session Manager R7.0.

Readers should pay attention to Section 2, in particular the scope of testing as outlined in Section 2.1 as well as the observations noted in Section 2.2, to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe a compliance-tested configuration of the interoperability of Open Trade from IPC to successfully interoperate with Avaya Communication Server 1000 Release 7.6 (CS1000) and Avaya Aura® Session Manager Release 7.0. IPC Open Trade is a trading communication platform combining voice, email, instant messaging and video, for communication in fast-moving markets. Open Trade integrates cloud strategy with the back-end localised in the network and makes managing distant sites and turrets easier via remote access and administration. Any Open Trade component can be managed as standard IT equipment.

2. General Test Approach and Test Results

Open Trade is integrated with the CS 1000 using SIP trunks between Open Trade and Session Manager. Session Manager directs the call over SIP trunks to a specific IP address depending on the digits dialled using SIP signalling. Compliance testing was executed manually by making calls to and from extensions on the Open Trade SIP server. The test results and observations are listed in **Section 2.2**.

DevConnect Compliance Testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect Compliance Testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

Note: IPC recently acquired Etrali Trading Solutions. All compliance testing was performed with Etrali Open Trade and so some of the references in the screen shots may show Etrali instead of IPC. These Application Notes will display the company name as IPC where possible.

2.1. Interoperability Compliance Testing

During interoperability compliance testing the following type of calls were made:

- **Basic Inbound/Outbound** – Tests inbound calls to Open Trade.
- **Call Hold** – Tests held calls to/from Open Trade.
- **Call Transfer** – Tests transferred calls to/from Open Trade.
- **Call Conference** – Tests conferenced calls to/from Open Trade.
- **Call Forward** – Tests forwarded calls to/from Open Trade.
- **Call Information** – Tests caller information (CLID).
- **VoiceMail, DTMF RFC 2833 and Message Notification** – Tests voice message, message notification and DTMF transmission to/from Open Trade.
- **Failover/Serviceability** – Tests the behaviour of Open Trade when there are certain failed conditions.

2.2. Test Results

All tests passed successfully. Below are listed observations following the compliance test of this solution.

1. Open Trade is unable to propagate updates to the display name during or after transferring a call. For example, where Avaya1 calls OT1 and OT1 transfers the call to Avaya2, both Avaya1 and Avaya2 show the connected party as OT1.
2. Open Trade does not support the multipart (MIME) in SIP INVITE message of the CS 1000 therefore the MIME must be removed from the INVITE sent from CS 1000. To remove MIME, an adaptation was created in **Section 6.3** and applied in the Open Trade SIP entity in the **Section 6.4**.
3. Callpilot used as voicemail gave an issue with forwarding sets, callers were not sent to the voice mailbox but they were sent to Callpilot as a 1st party. Therefore Callpilot cannot be used as a voicemail system for Open Trade.

2.3. Support

For more information on IPC Open Trade and product support visit:

<http://www.ipc.com/>

3. Reference Configuration

Figure 1 illustrates the setup used to verify the Open Trade solution with Session Manager and CS1000. Open Trade is deployed on a dedicated server running Windows 2008 R2 Enterprise server. Session Manager interfaces to the CS1000 using a SIP trunk registering with Session Manager. A VPN tunnel is setup to facilitate the connection between the IPC Open Trade LAN and the Avaya Telephony LAN. Once the VPN tunnel is established the Open Trade is registered with Session Manager as a SIP endpoint and calls can be made from the CS1000 phones to the IPC Open Trade phones.

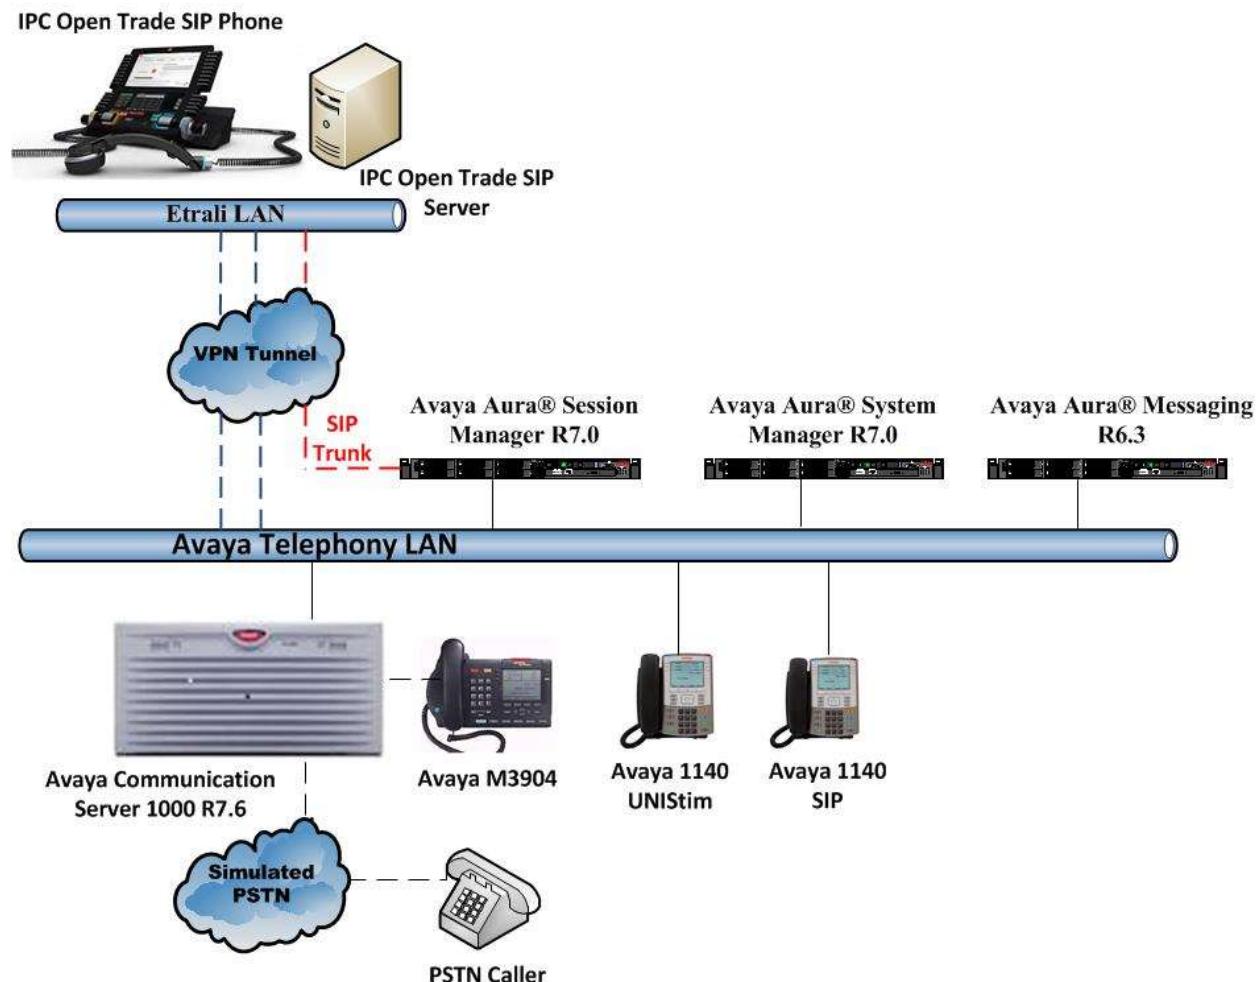

Figure 1: Reference Configuration Diagram

4. Equipment and Software Validated

The following equipment and software were used for the sample configuration provided:

Equipment/Software	Release/Version
Avaya Communication Server 1000E on CPPM	R7.6 (See Appendix A for list of patches)
Avaya Aura® System Manager running on a virtual server	System Manager 7.0.0.1 Build No. – 7.0.0.0.16266-7.0.9.7001011 Software Update Revision No: 7.0.0.1.4212
Avaya Aura® Session Manager running on a virtual server	Session Manager R7.0 Build No. – 7.0.0.1.700102
Avaya Aura Messaging	R6.3
Avaya 1140 UNIStim Deskphone	V0625C8D
Avaya 1140 SIP Deskphone	SIP 04.03.12
Avaya M3904 Digital Deskphone	N/A
IPC Open Trade Terminal	5.3.x
IPC Plug-in Unit	5.3.x

5. Configure Avaya Communication Server 1000

The document assumes the CS1000 is setup and fully working, it also assumes that the signaling Server is setup and running with the SIP Gateway already configured.

Prerequisites: An Avaya CS1000 server which has been:

- Installed with CS 1000 Release 7.6 Linux Base.
- Joined CS 1000 Release 7.6 Security Domain.
- Deployed with SIP Trunk Application.

For more information on CS 1000 installation, maintenance, and upgrades see **Section 9**. The following software packages are enabled in the key code. If any of these features have not been enabled, please contact your Avaya account team or Avaya technical support at <http://www.avaya.com>.

Package Mnemonic	Package Number	Package Description	Package Type (New or Existing or Dependency)	Applicable Market
SIP	406	SIP Service package	New package	Global
FFC	139	Flexible Feature Codes	Existing package	Global
SIPL_Nortel	415	Avaya SIP Line	Existing package	-
SIPL_3ThirdParty	416	Third Party SIP Line	Existing package	-

The configuration operations illustrated in this section were performed using terminal access to the CS1000E using PuTTY. Again it is assumed a fully working CS1000E is in place with the necessary licensing. For all other provisioning information, such Administering Avaya CS1000E, refer to product documentation in **Section 9** of these Application Notes.

Note: The configuration of PSTN trunks and routes are outside the scope of these Application Notes.

Note: Not all prompts need an answer. The prompts outlined below are mandatory for a basic configuration. Accept the default responses for all other prompts by pressing the Return key.

Note: A full printout of the SIP D-Channel, Route and Trunk information used for the compliance testing is included in the **Appendix B** of these Application Notes.

5.1. Verify Licences

To ensure the CS1000E is licensed for SIP use **LD 22** and type **SLT** at the **REQ** prompt. Check for **SIP ACCESS PORTS** (in bold below).

Prompt	Response	Description							
>	LD 22	Enter Overlay 22							
REQ	SLT								
System type is - Communication Server 1000E/CPHM Linux									
CPHM - Pentium M 1.4 GHz									
IPMGs Registered: 1

5.2. Configuring a SIP Connection on CS1000E

To configure the SIP connection there are a number of steps.

- Create a D-channel for the SIP trunk
- Create Route Data Block
- Add TIE Trunks

5.2.1. Create a D-Channel

Use the **CHG** command in **LD 17** to create a D-channel for the SIP connection. In the example below, D-Channel 1 (i.e. **DCH 1**) was created. At the **CTYP** prompt, enter **DCIP**. This signifies the SIP D-Channel.

LD 17

Prompt	Response	Description
>	LD 17	Enter Overlay 17
REQ	CHG	Change
TYPE	ADAN	Change the Action Device and Number
ADAN	NEW	Create New Action Device and Number
TYPE	DCH 1	Create new D-Channel 1
CTYP	DCIP	Card type is IP D-Channel
USR	ISDL	Integrated Services Digital Line
IFC	SL1	D-Channel interface type

5.2.2. Create Route Data Block

Use the **NEW** command in **LD 16** to create a Route Data Block. The route created is a **TIE** route in order to connect to Open Trade. Ensure **VTRK** is set to **YES** and **PCID** is **SIP**. Ensure that the other values highlighted are configured correctly. A complete printout of all prompts can be found in **Appendix B** of these Application Notes.

LD 16

Prompt	Response	Description
>	LD 16	Enter Overlay 16
REQ	NEW	Create new
TYPE	RDB	Route Data block
CUST	0	Customer Number as defined in LD15
ROUT	22	Route Number
TKTP	TIE	Route Type
VTRK	YES	Virtual Route
PCID	SIP	Protocol ID for route
NODE	111	Node number of the CS1000E
DTRK	NO	Digital Trunk Route
ISDN	YES	Integrated Services Digital Network
MODE	ISDL	mode of operation
IFC	SL1	Interface type
ACOD	8022	Access Code for trunk route

5.2.3. Adding TIE Trunks

Use the **NEW** command in **LD 14** to add (**IPTI**) **TIE** trunks to the new route created in **Section 5.2.2**. If adding multiple trunks for each route, use **NEW XX**, where XX is the number of trunks. In the example below **10** trunks were added.

LD 14

Prompt	Response	Description
>	LD 14	Enter Overlay 14
REQ	NEW 10	Create 10 New Trunks
TYPE	IPTI	IP TIE trunk
TN	100 0 3 0	Loop Shelf Card Unit
CUST	0	Customer Number as defined in LD15
RTMB	22 1	Route number and Member number

5.3. Configure a Coordinated Dialing Plan

In order to setup a Coordinated Dialing Plan (CDP) both a route list index and a CDP are added. This is required to route calls over the SIP trunk.

5.3.1. Create a Route List Index

Use the **NEW** command in **LD 86** to create a **RLI**. Enter the route (**ROUT**) that was created in **Section 5.2.2**.

LD 86

Prompt	Response	Description
>LD 86	Enter overlay 86	
REQ	NEW	Create New
CUST	0	Customer Number as defined in overlay 15
FEAT	RLB	Route list Block
TYPE	RLI	Route list Index
RLI	22	Route list Index number
ENTR	0	First entry for the RLI
ROUT	22	Enter the route number

5.3.2. Create CDP

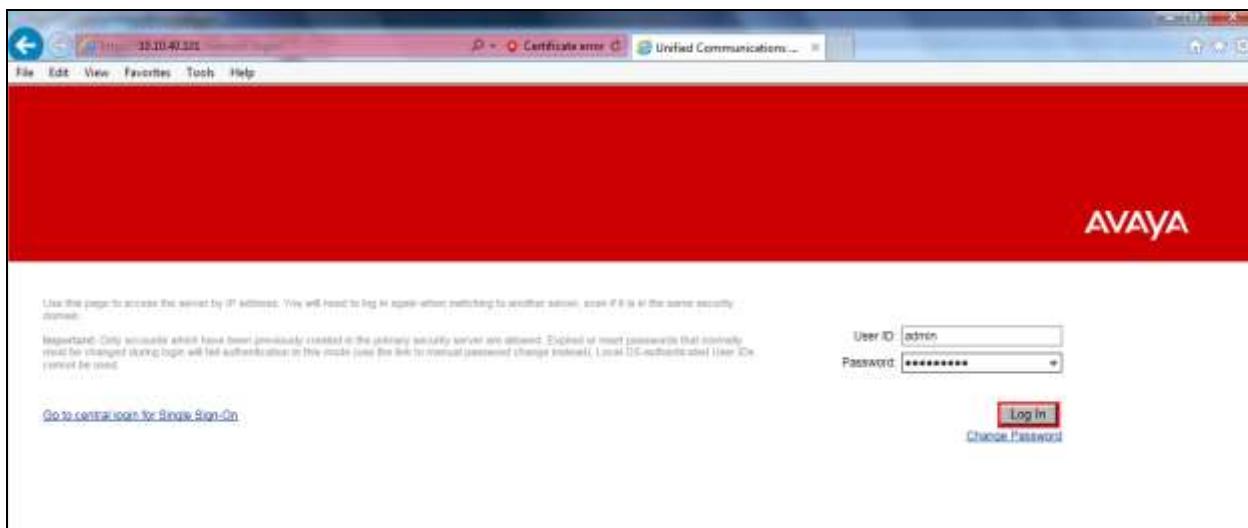

Use the **NEW** command in **LD 87** to create a **CDP** entry for the Open Trade routing. For each extension, a CDP entry needs to be created. In the example below, the **DSC** is **5100**, **FLEN** is **4** and the **RLI** is **22**. The RLI number used is the one created in **Section 5.3.1**.

LD 87

Prompt	Response	Description
>	LD 87	Enter Overlay 87
REQ	NEW	Create new
CUST	0	Customer Number as defined in overlay 15
FEAT	CDP	Coordinated dialing plan
TYPE	DSC	Distance Steering code
DSC	5100	Distant Steering code
FLEN	4	Flexible Length number of digits
RLI	22	Route list index Number

5.4. Configure SIP Gateway in Element Manager

The CS1000 that was used for compliance testing was setup as its own security domain so changes to Element Manager are made by opening a web session to the CS1000 directly and not through System Manager as it may be on other sites.

The **Elements** page is shown in the following screenshot. Click Element Name of the CS 1000 that needs to be accessed as is highlighted in the red box below.

A screenshot of the Avaya Unified Communications Management interface, specifically the 'Elements' page. The left sidebar shows navigation links for Network, User Services, Security, and Tools. The main area displays a table of elements. The first row, which contains the element name 'EM on cs1000', is highlighted with a red box. The table columns include 'Element Name', 'Element Type', 'Release', 'Address', and 'Description'. The table shows five entries: 'EM on cs1000' (CS1000, 7.0, 192.168.40.101, 'New element'), 'cs1000 devconnect local (primary)' (Linux Base, 7.0, 10.10.40.101, 'Base CS element'), '192.168.40.102' (Media Gateway Controller, 7.0, 192.168.40.102, 'New element'), and 'NRSM on cs1000' (Network Routing Service, 7.0, 192.168.40.101, 'New element').

Navigate to **IP Network → Nodes Servers and Media Cards** in the left window and select the Node associated with the CS1000E in the example below this **Node ID** is **111**. Open this node by clicking on **111** highlighted below.

Node ID	Components	Enabled Applications	ELAN IP	Node/TLAN IPv4	Node/TLAN IPv6	Status
111	1	SIP Line, LTPS, Gateway (SIPGw)		10.10.40.111		Synchronized

Select **Gateway (SIPGw)** highlighted.

Hostname	Type	Deployed Applications	ELAN IP	TLAN IPv4	Role
cs1kpg1	Signaling_Server	SIP Line, LTPS, Gateway (SIP/H323), PD, Presence Publisher, IP Media Services	192.168.40.101	10.10.40.101	Leader

Enter the correct **SIP domain name** note this will be referenced again in **Section 6.1.**

AVAYA CS1000 Element Manager

Managing: 192.168.40.101 Username: admin
System > IP Network > IP Telephony Nodes > Node Details > Virtual Trunk Gateway Configuration
Node ID: 111 - Virtual Trunk Gateway Configuration Details

General | SIP Gateway Settings | SIP Gateway Services

Vtrk gateway application: Enable gateway service on this node

General

Vtrk gateway application: SIP Gateway (SIPGw)

SIP domain name: devconnect.local devconnect.local

Local SIP port: 5060 (1 - 65535)

Gateway endpoint name: CS1KPG1

Gateway password:

Application node ID: 111 (1 - 9999)

Enable failsafe NRS

Note: Failsafe NRS cannot be enabled, if all servers in the node have NRS application deployed.

Virtual Trunk Network Health Monitor

Monitor IP addresses (listed below)
Information will be captured for the IP addresses listed below.

Monitor IP: Add

Monitor addresses:

* Required Value. Note: Changes made on this page will NOT be transmitted until the Node is also saved.

Scroll down to **Proxy Or Redirect Server: Proxy Server Route 1** and enter the IP Address of the Session Manager for the **Primary TLAN IP address**. Ensure the **Port** number is set to **5060** and the **Transport protocol** is set to **TCP**, note this can be set to either TCP or UDP but the corresponding SIP Entity Link will need to be set the same on Session Manager for the CS1000. Everything else can be left as default.

AVAYA CS1000 Element Manager

Managing: 192.168.40.101 Username: admin
System > IP Network > IP Telephony Nodes > Node Details > Virtual Trunk Gateway Configuration
Node ID: 111 - Virtual Trunk Gateway Configuration Details

General | SIP Gateway Settings | SIP Gateway Services

Proxy Or Redirect Server:

Proxy Server Route 1:

Primary TLAN IP address: 10.10.40.12 10.10.40.12

The IP address can have either IPv4 or IPv6 format based on the value of "TLAN address type".

Port: 5060 (1 - 65535)

Transport protocol:

Options: Support registration Primary CDS proxy

Secondary TLAN IP address: 0.0.0.0

The IP address can have either IPv4 or IPv6 format based on the value of "TLAN address type".

Port: 5060 (1 - 65535)

Transport protocol:

Options: Support registration

* Required Value. Note: Changes made on this page will NOT be transmitted until the Node is also saved.

Ensure the same details are filled in for the **Proxy Server Route 2**. Click on **Save** at the bottom right of the screen.

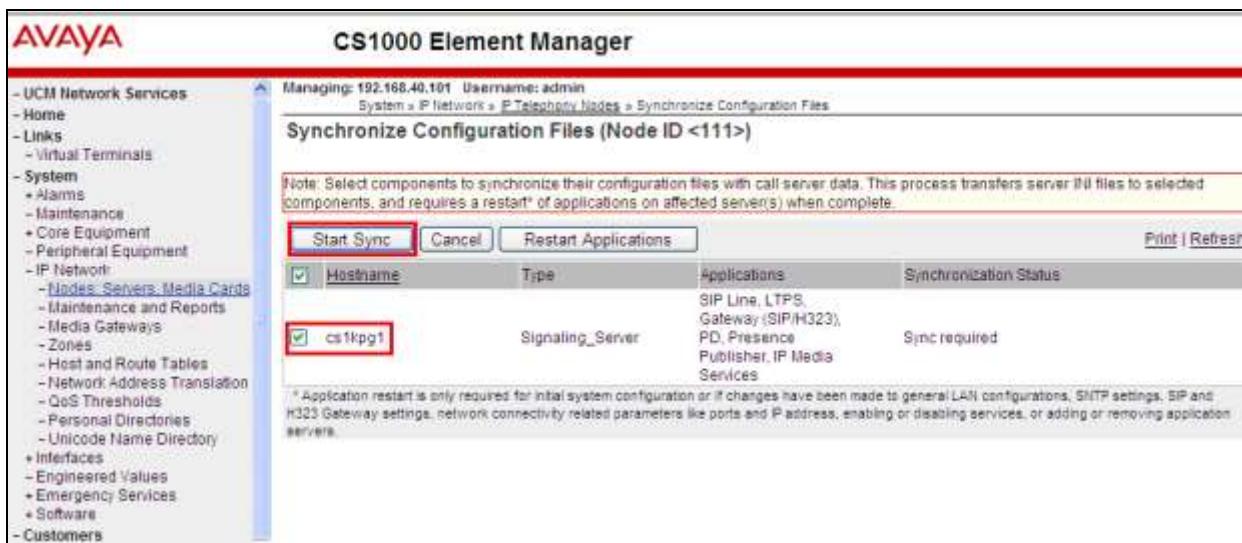

Click on **Save** again as highlighted below.

Select to add	Add	Remove	Make Leader	Print Refresh	
<input type="checkbox"/> Hostname	Type	Deployed Applications	ELAN IP	TLAN IPv4	Role
<input type="checkbox"/> cs1log1	Signaling_Server (SIP/H323)	PD, Presence	192.168.40.101	10.10.40.101	Leader

Select **Transfer Now** as shown below.

The following screen is displayed requiring that synchronization is performed followed by a restart of the Applications. Ensure the **Hostname** is ticked and click on **Start Sync**.

The following screen shows the **Sync in progress**.

Hostname	Type	Applications	Synchronization Status
cs1ippg1	Signaling_Server	SIP Line, LTPS, Gateway (SIP/H323), PD, Presence Publisher, IP Media Services	Sync in progress

Once the Sync is completed select the **Hostname** again and click on **Restart Applications**. This will complete the Signalling Server configuration for Session Manager routing.

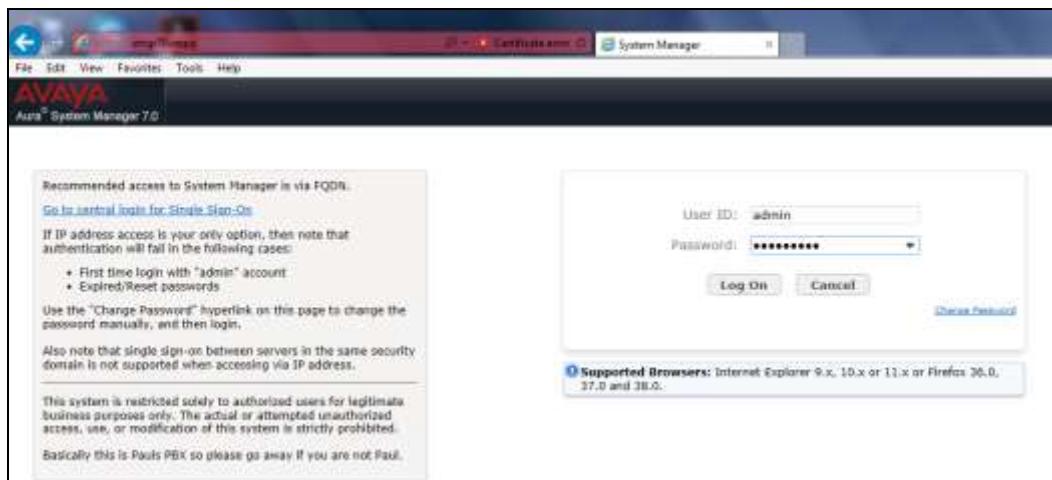

Hostname	Type	Applications	Synchronization Status
<input checked="" type="checkbox"/> cs1ippg1	Signaling_Server	SIP Line, LTPS, Gateway (SIP/H323), PD, Presence Publisher, IP Media Services	Sync required

6. Configure Avaya Aura® Session Manager

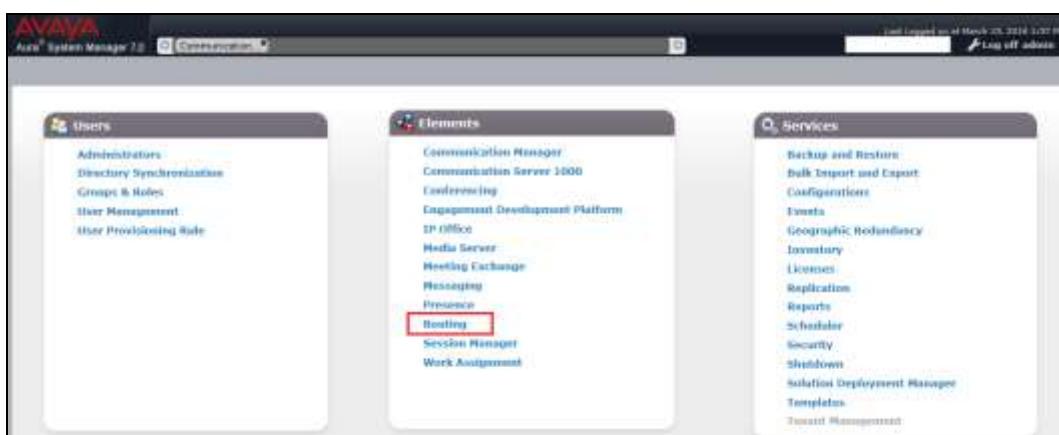

This section provides the procedures for configuring Session Manager. The procedures include adding the following items:

- Specify SIP domain.
- Add Location.
- Create an Adaptation for Open Trade.
- Add SIP Entity for Open Trade.
- Add Entity Link for Open Trade.
- Add Routing Policy for Open Trade.
- Add Dial Pattern for routing to Open Trade.

Configuration is accomplished by accessing the browser-based GUI of System Manager using the URL “<https://<ip-address>>”, where <ip-address> is the IP address of System Manager. Log in with the appropriate credentials.

Navigate to **Routing**, highlighted below.

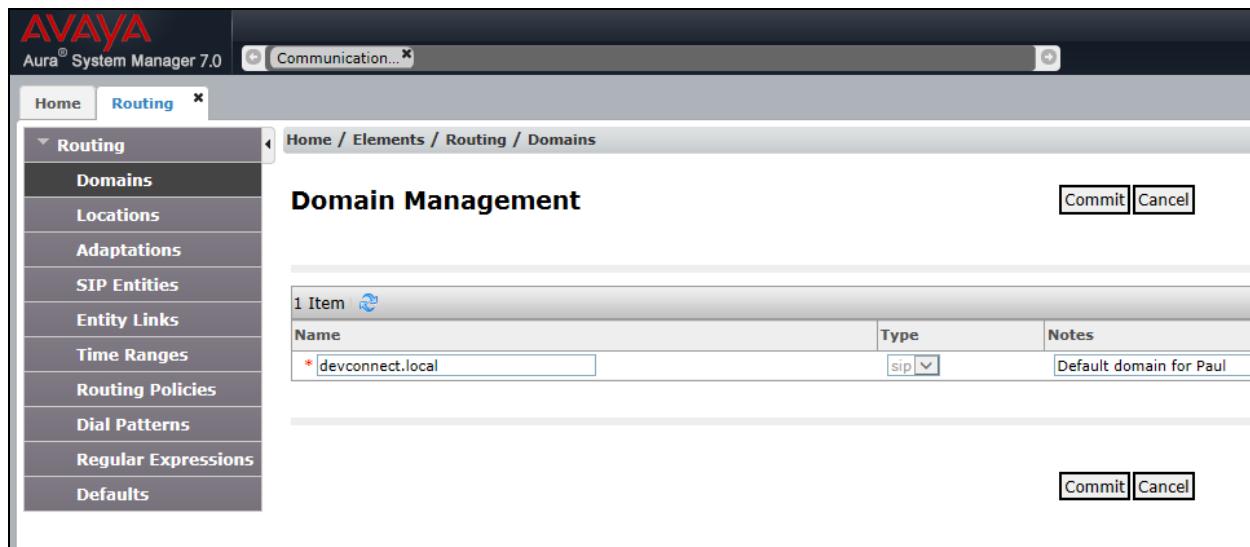

6.1. Specify SIP Domain

Add the SIP domain for which the communications infrastructure will be authoritative. From the home page of System Manager, navigate to **Elements → Routing**, the Routing page will be displayed, select **Domains** on the left and click the **New** button on the right (not shown). The following screen will then be shown. Fill in the following:

- **Name:** The authoritative domain name (e.g., **devconnect.local**).
- **Type:** Select **sip** in the dropdown menu.
- **Notes:** Descriptive text (optional).
- Click **Commit**.

Since the sample configuration does not deal with any other domains, no additional domains need to be added.

6.2. Add Location

Locations can be used to identify logical and/or physical locations where SIP Entities reside for purposes of bandwidth management. To add a location, select **Locations** on the left and then click the **New** button on the right (not shown). The following screen will then be shown. Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **Notes**: Descriptive text (optional).
- Under **Location Pattern**:
 - **IP Address Pattern**: A pattern used to logically identify the location.
 - **Notes**: Descriptive text (optional).

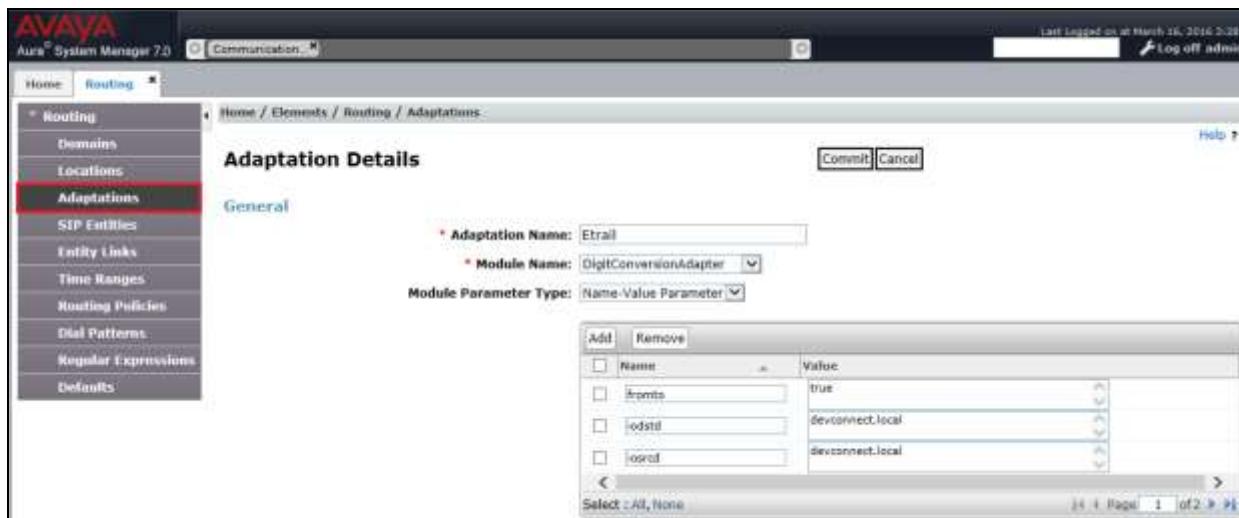

Note: the example below shows the Avaya Subnet **10.10.40.x** and the IPC subnet **172.29.187.x** added. Click on **Commit** to complete.

The screenshot shows the 'Location Details' configuration page in the Avaya System Manager 7.0 interface. The left sidebar is titled 'Routing' and includes options like Domains, Locations, Adaptations, SIP Entities, Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main panel has a breadcrumb navigation bar: Home / Elements / Routing / Locations. The title 'Location Details' is at the top, with 'General' and 'Location Pattern' sections below it. The 'General' section contains fields for 'Name' (PGLAB) and 'Notes' (Pauls Lab). The 'Location Pattern' section contains a table with two items: 'IP Address Pattern' (10.10.40.* with note 'Pauls subnet') and 'IP Address Pattern' (172.29.187.* with note 'Etrails subnet'). Both sections have 'Commit' and 'Cancel' buttons at the bottom right.

6.3. Create an Adaptation for Open Trade

To configure a new Adaptation select **Adaptations** from the left window and click on **New** (not shown) from the main window.

Enter a descriptive name in the **Adaptation Name** and select **DigitConversionAdapter** for the **Module Name**. Select **Name-Value Parameter** as the **Module Parameter Type**.

Add the following Parameters:

- **Fromto = true**
- **Iodstd = devconnect.local** (or whatever the domain name is)
- **Iosrcd = devconnect.local** (or whatever the domain name is)

Add	Remove
<input type="checkbox"/>	Name
<input type="checkbox"/>	fromto
<input type="checkbox"/>	iodstd
<input type="checkbox"/>	iosrcd

Select : All, None Page 1 of 2

- **MIME = no**
- **odstd** = IP address of the Open Trade SIP Server
- **osrcd** = IP address of Session Manager

<input type="button" value="Add"/>	<input type="button" value="Remove"/>	
<input type="checkbox"/>	Name	Value
<input type="checkbox"/>	MIME	no
<input type="checkbox"/>	odstd	172.29.187.244
<input type="checkbox"/>	osrcd	10.10.40.12

Select : All, None **Page 2 of 2**

Click on **Commit** once completed.

Select : All, None

6.4. Add SIP Entity for Open Trade

A SIP Entity must be added for Open Trade. To add a SIP Entity select SIP Entities on the left and click on the **New** button on the right (not shown). The following screen is displayed. Fill in the following:

- Under **General**:
 - **Name**: A descriptive name.
 - **FQDN or IP Address**: Enter Open Trade IP address.
 - **Type**: Select **Other**.
 - **Adaptation**: Select the adaption created in **Section 6.3**.
 - **Location**: Select the location defined previously.
 - **Time Zone**: Time zone for this location.

Defaults may be used for the remaining fields. Click **Commit** to save each SIP Entity definition.

The screenshot shows the Avaya System Manager 7.0 interface. The title bar reads "AVAYA" and "Avaya System Manager 7.0". The main window has a navigation menu on the left with items like Home, Routing, Domains, Locations, Adaptations, SIP Entities (which is selected), Entity Links, Time Ranges, Routing Policies, Dial Patterns, Regular Expressions, and Defaults. The main content area is titled "SIP Entity Details" and has a "General" tab selected. It contains the following fields:

- * Name: Etrail_OT
- * FQDN or IP Address: 172.29.187.244
- Type: SIP Trunk
- Notes: (empty)
- Adaptation: Etrail
- Location: PGLAB
- Time Zone: Europe/Dublin
- * SIP Timer B/F (in seconds): 4
- Credential name: (empty)
- Securable:
- Call Detail Recording: egress

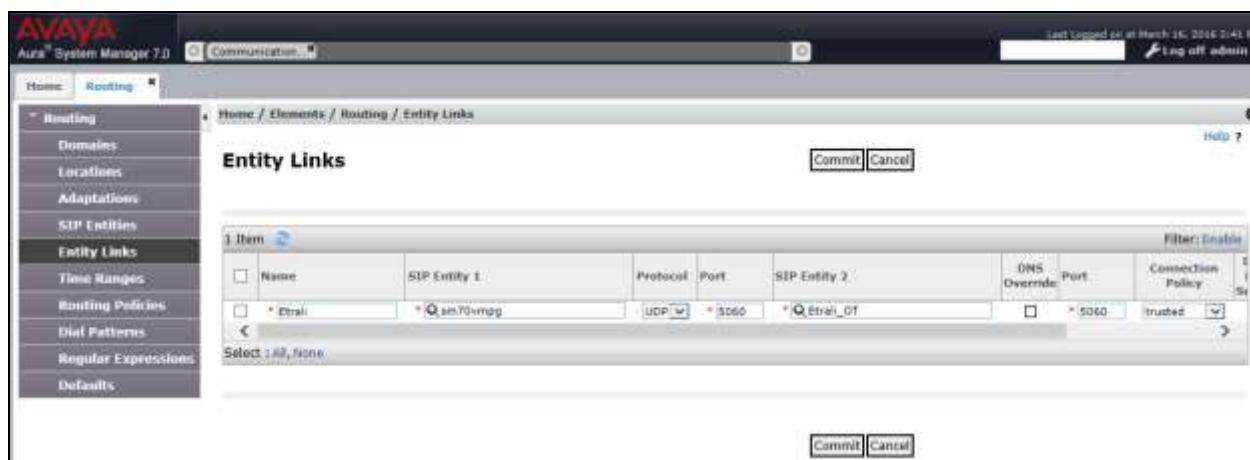

At the top right of the dialog are "Commit" and "Cancel" buttons.

6.5. Add Entity Link for Open Trade

The SIP trunk from Session Manager to Open Trade is described by Entity Links. To add an Entity Link, select Entity Links on the left and click on the **New** button on the right (not shown). Fill in the following fields in the new row that is displayed:

- **Name:** A descriptive name.
- **SIP Entity 1:** Select the Session Manager.
- **Protocol:** Select the appropriate protocol.
- **Port:** Port number to which the other system sends SIP requests.
- **SIP Entity 2:** Select the Open Trade

Click on **Commit** when completed.

6.6. Add Routing Policy for Open Trade

Routing policies describe the conditions under which calls will be routed to the SIP Entities. A routing policy must be added for Open Trade. To add a routing policy, select **Routing Policies** on the left and click on the **New** button on the right (not shown). The following screen is displayed. Fill in the following:

- Under **General**: Enter a descriptive name in Name.
- Under SIP Entity as Destination: Click **Select**, and then select the appropriate SIP entity to which this routing policy applies.

The screenshot shows the 'Routing Policy Details' screen in Avaya System Manager 7.0. The left sidebar is collapsed. The main area shows the 'General' tab selected. The 'Name' field is populated with 'To Etrali'. The 'Disabled' checkbox is unchecked. The 'Retries' field contains '0'. The 'Notes' field contains 'Etrali'. Below this, the 'SIP Entity as Destination' section has a 'Select' button. At the top right are 'Commit' and 'Cancel' buttons.

Select the Open Trade SIP Entity for the Routing Policy for Open Trade.

The screenshot shows the 'SIP Entities' screen in Avaya System Manager 7.0. The left sidebar is collapsed. The main area shows a table of SIP entities. One row, 'Etrali_0T', is selected and highlighted with a red border. The table columns are Name, FQDN or IP Address, Type, and Notes. Other entries include 'acc0450vmpg', 'AACCT0vmpg', 'AccmDECT_Master', 'AccmDECT_Slave', 'cm63vmpg', 'cm70vmpg', 'CS1000E', 'IPSOV2', 'messaging63vmpg', and 'sm70vmpg'. At the bottom is a 'Select 1 item' button.

Name	FQDN or IP Address	Type	Notes
acc0450vmpg	10.10.40.55	SIP Trunk	
AACCT0vmpg	10.10.40.80	SIP Trunk	AACCT0vmpg
AccmDECT_Master	10.10.40.101	Endpoint Concentrator	untrusted entity link
AccmDECT_Slave	10.10.40.102	Endpoint Concentrator	untrusted entity link
cm63vmpg	10.10.40.31	CM	R6.3 CM
cm70vmpg	10.10.40.13	CM	
CS1000E	10.10.40.111	Other	CS1KFG1
Etrali_0T	172.29.187.344	SIP Trunk	
IPSOV2	10.10.40.20	SIP Trunk	
messaging63vmpg	10.10.40.32	SIP Trunk	AA Messaging R6.3
sm70vmpg	10.10.40.12	Session Manager	Sm100 IP

Click on Commit when finished.

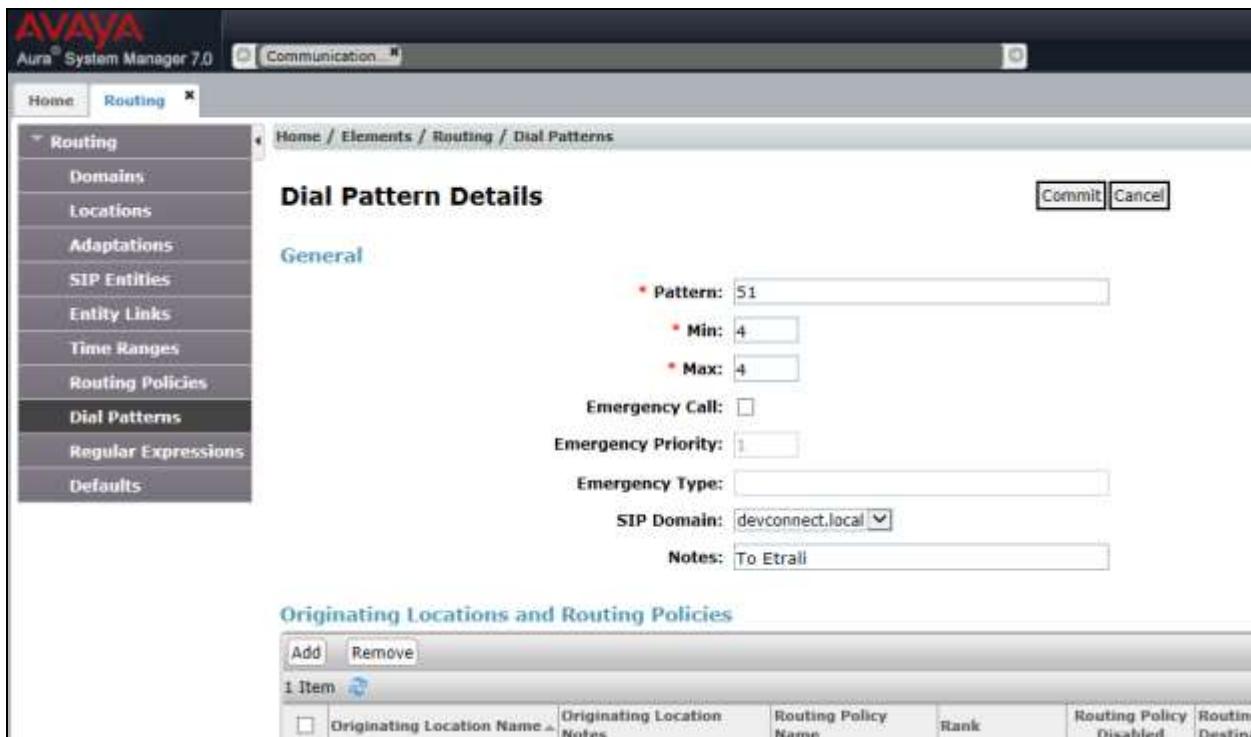

The screenshot shows the 'Routing Policy Details' page in the Avaya System Manager 7.0 interface. The left sidebar is titled 'Routing' and lists various options: Domains, Locations, Adaptations, SIP Entities, Entity Links, Time Ranges, Routing Policies (which is selected), Dial Patterns, Regular Expressions, and Defaults. The main content area has a breadcrumb navigation path: Home / Elements / Routing / Routing Policies. The title 'Routing Policy Details' is displayed above a form. The form includes fields for 'Name' (set to 'To_Etrall'), 'Disabled' (unchecked), 'Retries' (set to 0), and 'Notes' (set to 'Etrall'). Below this is a section titled 'SIP Entity as Destination' with a table showing one entry: 'Name' Etrall_0T, 'FQDN or IP Address' 172.29.187.244, 'Type' SIP Trunk, and 'Notes'. A 'Time of Day' section follows, featuring an 'Add' button, a table header with columns for Ranking, Name, Mon through Sun, Start Time, End Time, and Notes, and a single row entry for '24/7' spanning all days from 00:00 to 23:59. A 'Select All/None' checkbox is at the bottom of the table. At the top right of the main content area are 'Commit' and 'Cancel' buttons, with 'Commit' being highlighted with a red border.

6.7. Add Dial Pattern for routing to Open Trade

Dial patterns must be defined that will direct calls to the appropriate SIP Entity. In the sample configuration, 4-digit extensions beginning with 51xx route to the Open Trade. To add a dial pattern select **Dial Patterns** on the left and click on the **New** button on the right (not shown). Fill in the following:

Under General:

- **Pattern:** Dialed number or prefix.
- **Min:** Minimum length of dialed number.
- **Max:** Maximum length of dialed number.
- **SIP Domain:** Select **devconnect.local** SIP domain as defined in **Section 6.1**.
- Under Originating Locations and Routing Policies, click **Add...**

The screenshot shows the 'Dial Pattern Details' dialog box in the Avaya System Manager 7.0 interface. The 'General' tab is active, displaying the following configuration:

- Pattern: 51
- Min: 4
- Max: 4
- Emergency Call:
- Emergency Priority: 1
- Emergency Type:
- SIP Domain: devconnect.local
- Notes: To Etrali

Below the general settings, the 'Originating Locations and Routing Policies' section is visible, showing a table with one item:

Add	Remove	1 Item												
<input type="checkbox"/>		<table border="1"><thead><tr><th>Originating Location Name</th><th>Originating Location Notes</th><th>Routing Policy Name</th><th>Rank</th><th>Routing Policy Disabled</th><th>Routing Destination</th></tr></thead><tbody><tr><td></td><td></td><td></td><td></td><td><input type="checkbox"/></td><td></td></tr></tbody></table>	Originating Location Name	Originating Location Notes	Routing Policy Name	Rank	Routing Policy Disabled	Routing Destination					<input type="checkbox"/>	
Originating Location Name	Originating Location Notes	Routing Policy Name	Rank	Routing Policy Disabled	Routing Destination									
				<input type="checkbox"/>										

The following screen shows the Routing Policy created in **Section 6.6** being added for the dial pattern. Click **Select** to save this dial pattern.

This screenshot shows the 'Originating Location' configuration in Avaya System Manager 7.0. The left sidebar navigation menu is visible, with 'Routing Policies' selected under the 'Routing' category. The main content area displays the 'Originating Location' section, which includes a table of existing locations and a list of routing policies assigned to them. A 'Select' button is present at the top right of the table.

Name	Notes	Filter: Enable
PGLAB	Pauls Lab	

Name	Disabled	Destination	Notes	Filter: Enable
To_aacc645IPvmeg		aacc645IPvmeg	aacc645IPvmeg	
To_AACC70vmeg		AACC70vmeg	To_AACC70vmeg	
To_cm63vmeg		cm63vmeg	Routing to CM63	
To_cm70vmeg		cm70vmeg		
To_CS1000E		CS1000E	Routing to CS1000E	
To_Etrai		Etrai_OT	Etrai	
To_IP050W2		IP050W2	To IP050W2	
To_Messaging		messaging63vmeg	AA Messaging R63	

Click on **Commit** to finish.

This screenshot shows the 'Dial Pattern Details' configuration in Avaya System Manager 7.0. The left sidebar navigation menu is visible, with 'Dial Patterns' selected under the 'Routing' category. The main content area displays the 'General' settings for a dial pattern, including fields for 'Pattern' (51), 'Min' (4), 'Max' (4), and 'SIP Domain' (devconnect.local). Below these are sections for 'Emergency Call', 'Emergency Priority', 'Emergency Type', and 'Notes' (To Etrai). The 'Originating Locations and Routing Policies' section shows the configuration for the dial pattern, including the originating location (PGLAB) and the routing policy (To Etrai).

Originating Location Name	Originating Location Notes	Routing Policy Name	Rank	Routing Policy Disabled	Routing Policy Destination	Routing Policy Notes	Filter: Enable
PGLAB	Pauls Lab	To Etrai	0		Etrai_OT	Etrai	

7. Configuration of IPC Open Trade

Start the Open Trade Administration program, and log in with the appropriate credentials.

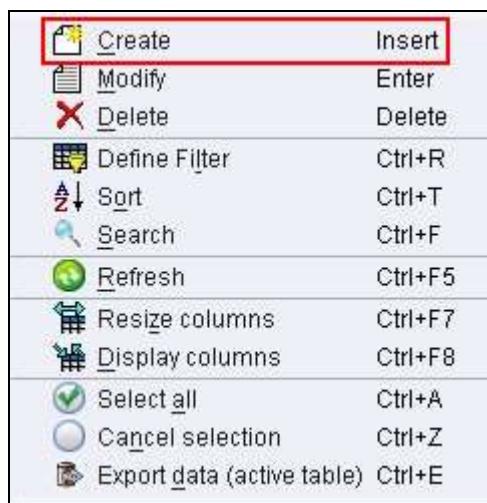

7.1. Create Carrier

Expand the **Facilities Management** icon and select the **Carriers** menu element. Place the cursor under the **Name** pane header and right-click..

A screenshot of the 'Administration 5.1.7.12' software interface. The left sidebar shows a tree view of management categories like Open Trade, Organizations Management, Recordings, Facilities Management (with Carriers selected), DID Prefixes, Peripheral equipments, Clusters, Telephone Management, and Contact Management. The main panel displays two tables. The top table is titled 'Carriers' and lists items such as 'BPI', 'BPI 300X', 'IP_Trunk_XAVIA_CTRK' (which is highlighted with a blue selection bar and has a context menu open), 'IP_Trunk_Axata R10.1', 'IP_Trunk_Avaya', 'IP_Trunk_Aviad_IP', 'IP_Trunk_CUCM', 'OSSB MASTER', 'OSSB SLAVE', and 'OSSB Avaya'. The bottom table is titled 'Resources LURK11' and lists 'Equipment name: EQ7001' and 'Administrative name: EQ7001-L001'. A context menu is visible over the 'IP_Trunk_XAVIA_CTRK' row.

Select **Create** from the menu which appears.

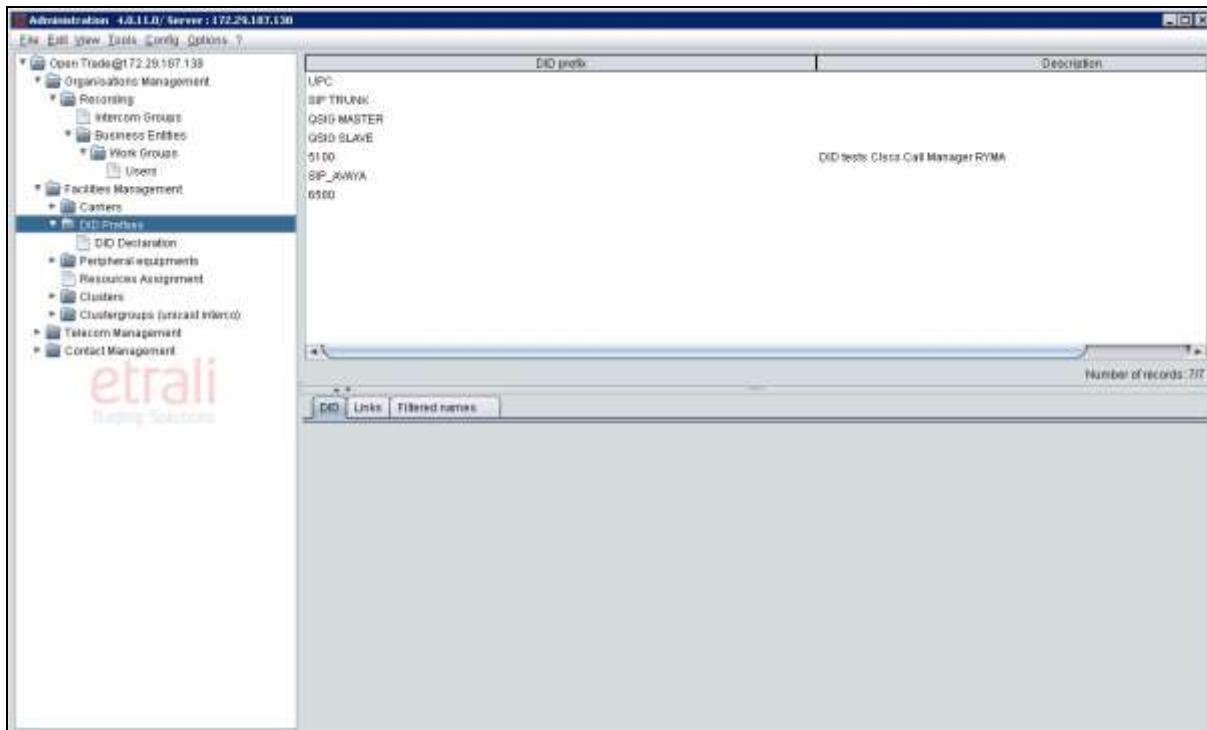

Enter an appropriate **Name** and **Description** and click **Ok**.

7.2. Create DID Prefixes

Expand the **DID Prefixes** menu item. Place the cursor in the **DID prefix** pane and right-click.

Select **Create** from the menu which appears.

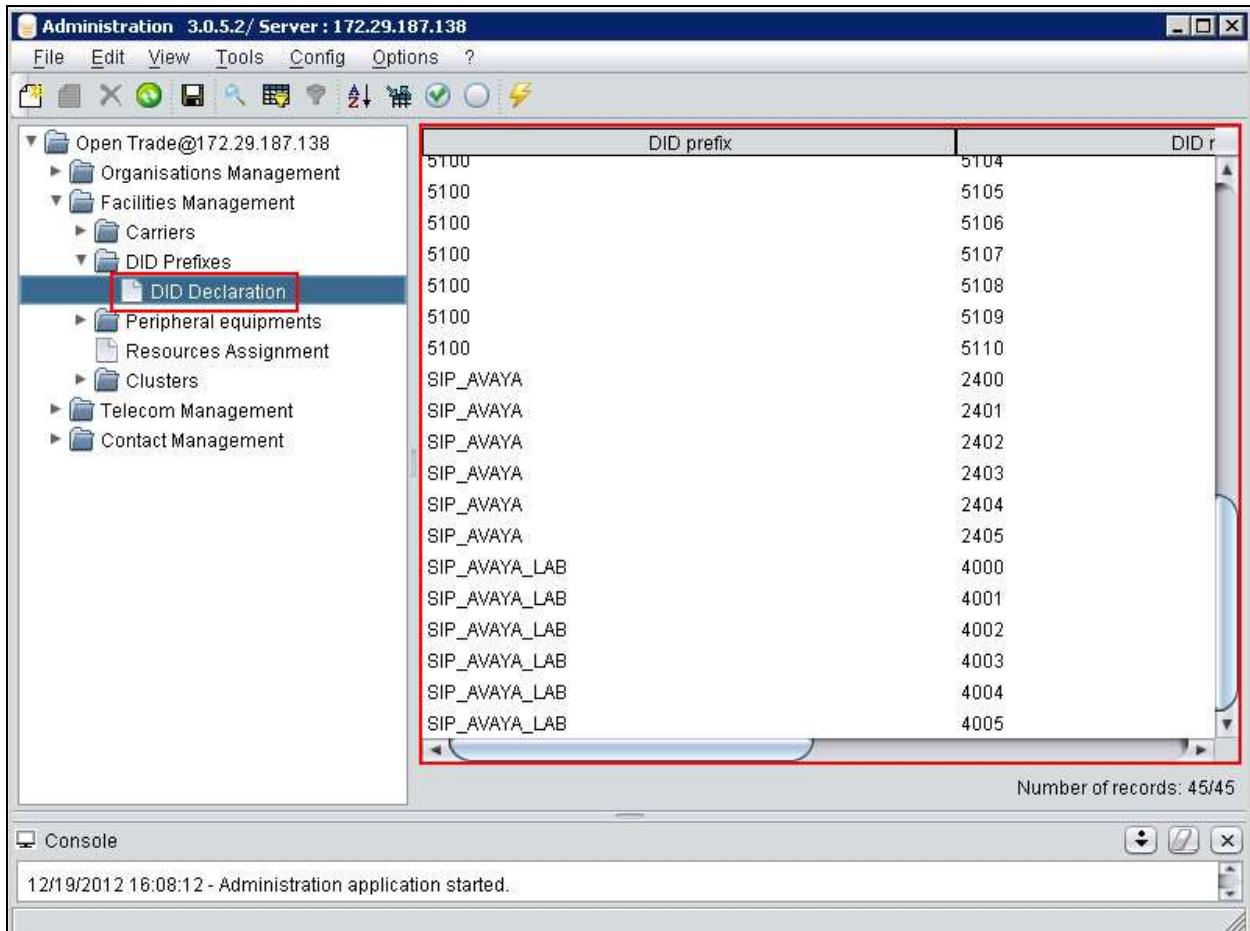

Enter an identifying name in the **DID prefix** field and click **Add**.

7.3. Create DID Declaration

Expand the **DID Declaration** menu item. Place the cursor under the first blank entry in the **DID prefix** pane (not shown) and right-click..

Select **Create** from the menu which appears.

Enter the following values in the **Add DID** screen which appears and click **Add**.

- **DID prefix** – select the DID Prefix created in **Section 7.2**.
- **From** – enter the first number of the range of numbers Open Trade will receive call for. In this case, **5100**.
- **To** – enter the last number of the range of numbers Open Trade will receive calls for. In this case, **5110**.
- **Organization** – select the name of the appropriate Organization from the drop-down menu, this is preconfigured and the details are not covered in these Application Notes.

7.4. Create SIP Strategies

Navigate to Facilities Management → Peripheral equipments → SIP Strategies.

The screenshot shows a software application window titled "Administration 4.0.11.6 Server: 172.29.107.130". The left sidebar contains a tree view of system navigation, including "Open Trade@172.29.107.130", "Organizations Management", "Recording", "Intercom Groups", "Business Entities", "Work Groups", "Users", "Facilities Management", "Carriers", "DID Prefixes", "DID Declaration", "Peripheral equipments", and "SIP Strategies". The "SIP Strategies" node is selected. The main pane displays a table titled "Strategies" with columns: Str, Strategy Name, Inter, B1, U, S, H, O, Req, Fms, Tfm, Tl, Mm, Ptm, D, D, R, B1, B2, R, D, H, D, C, Med, Lst, Rep. The table lists 21 entries, each representing a SIP strategy with various configuration parameters. A status bar at the bottom right indicates "Number of records: 21/21".

Str	Strategy Name	Inter	B1	U	S	H	O	Req	Fms	Tfm	Tl	Mm	Ptm	D	D	R	B1	B2	R	D	H	D	C	Med	Lst	Rep
1	DEFAULT_SIP								sip:	%n_ip:		380	100													
2	CISCO_SIP								sip:	%n_ip:		380	100													
3	DEFAULT_IP								sip:	%n_ip:		380	100													
4	DEFAULT_R								sip:	%n_ip:		380	100													
5	MILESIS_GA								sip:	%n_ip:		380	100													
6	NICE_REC_								sip:	%n_ip:		90														
7	NET_GATEW								sip:	%n_ip:		380	100													
8	CYBERTECH								sip:	%n_ip:		90														
9	ETRADEAL_JP								sip:	mp:	mp:		90													
10	BREKKE_EJ								sip:	%n_ip:		380	100													
11	NICE_REC_								sip:	%n_ip:		90														
12	CYBERTECH								sip:	%n_ip:		90														
13	AVAYA_IPBX								sip:	mp:	mp:	380	101	40	200											
14	TCS_NET								sip:	%n_ip:		380	100													
15	UCON_IPBX								sip:	%n_ip:		18		100												
16	ASTERISK_JP								sip:	sip:	sip:	380	100													
17	HIPATH_IPBX								sip:	%n_ip:		12		100												
18	SNOM_IPBX								sip:	%n_ip:		380	100													
19	ALCATEL_IP								sip:	%n_ip:		18		100												
20	NATTERBOX								sip:	%n_ip:		120														
21	UPC_BT								sip:	%n_ip:		600	100													

Enter a new name for the Strategy such as CUSTOM_001 . For Inherited from strategy, select: Avaya_IPBX

The screenshot shows a dialog box titled "Modify SIP Strategy". It has three main sections: "Strategy Name" containing "CUSTOM_001", "Strategy ID" containing "0027", and "Inherited from strategy" containing "AVAYA_IPBX". Below these are two tables: "Parameter" and "Value". The "Parameter" table lists various SIP-related parameters like "supervise_resources", "UPDATE_supported", "SUBSCRIBE_supported", etc. The "Value" table lists their corresponding values, many of which are checked or have specific numerical or textual values assigned. At the bottom are "Ok", "Restore", and "Cancel" buttons.

Parameter	Value
supervise_resources	<input checked="" type="checkbox"/>
UPDATE_supported	<input type="checkbox"/>
SUBSCRIBE_supported	<input type="checkbox"/>
NOTIFY_supported	<input checked="" type="checkbox"/>
outgoing_call_max_rate	0
request_uri_format	sip:%user@%domain:%port
from_uri_format	%name<sip:%user@%domain:%port>
to_uri_format	<sip:%user@%domain:%port>

Ok Restore Cancel

7.5. Create Peripheral Equipment

This section relates to the Avaya components from/to SIP traffic will be routed. Expand the **Peripheral equipments** menu item. Place the cursor under the first blank entry in the right-hand pane and right-click.

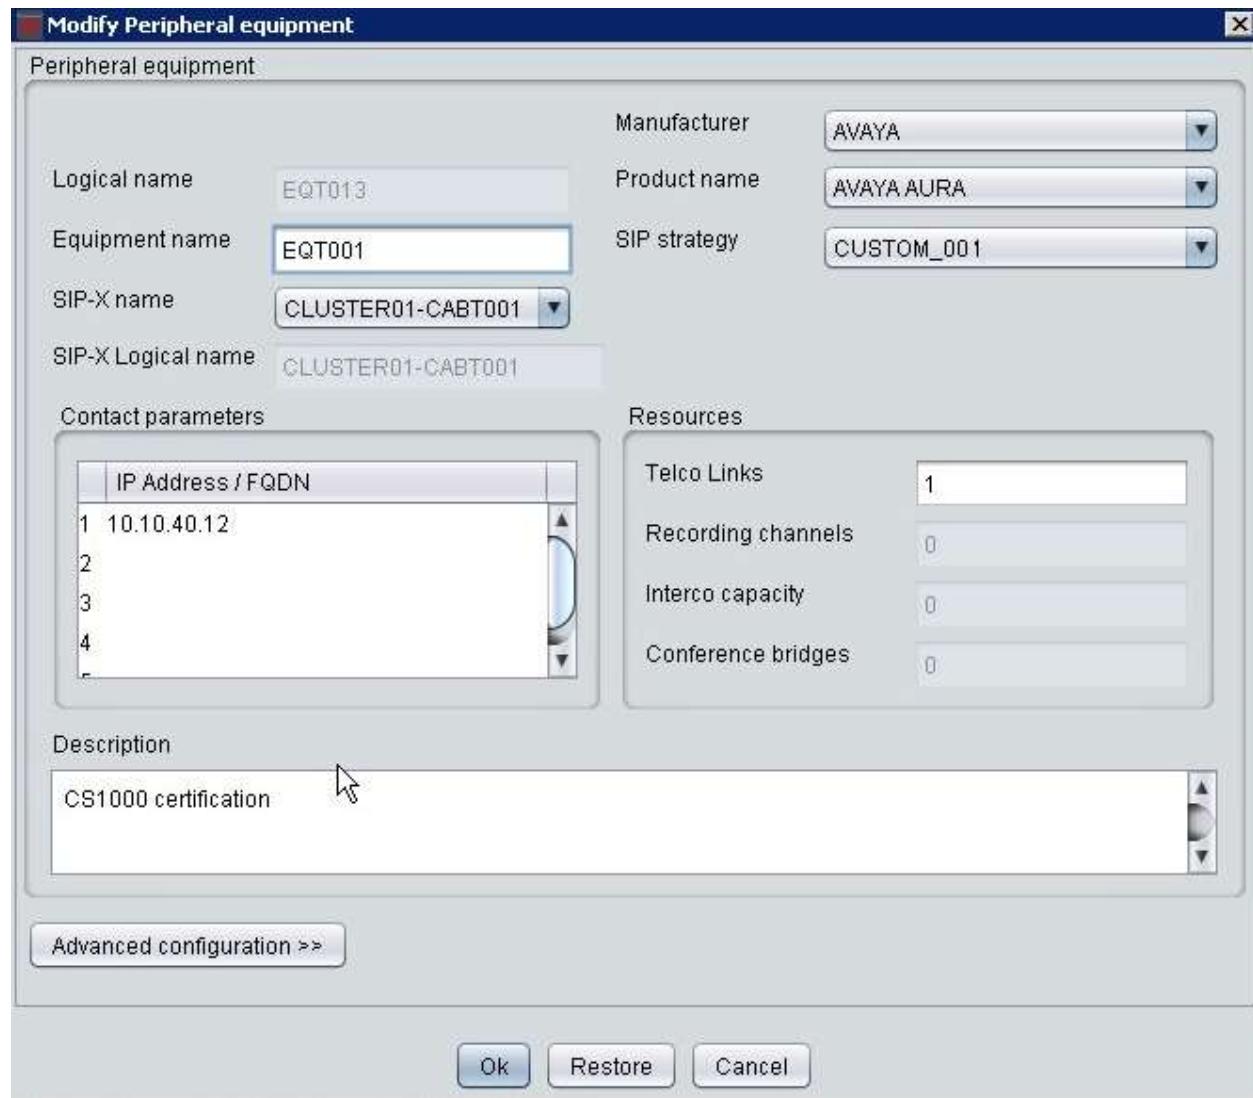

Select **Create** from the menu which appears.

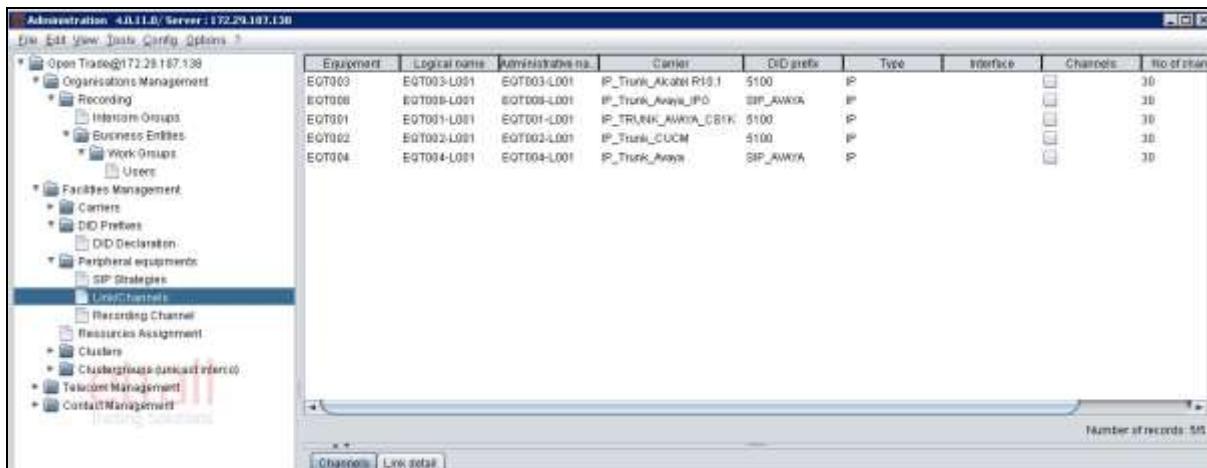

Enter the following values in the **Add Peripheral equipment** screen which appears and click **Add**.

- **Manufacturer** – select **AVAYA** from the drop down list.
- **Product name** – select **AVAYA AURA** from the drop down list.
- **SIP Strategy** – select **CUSTOM_001** from the drop down list. (Created in **Section 7.4**)
- **Equipment name** – enter an identifying name.
- **IP Address or Hostname** – enter the IP address or FQDN of Session Manager.
- **Telco links** – enter **1**.

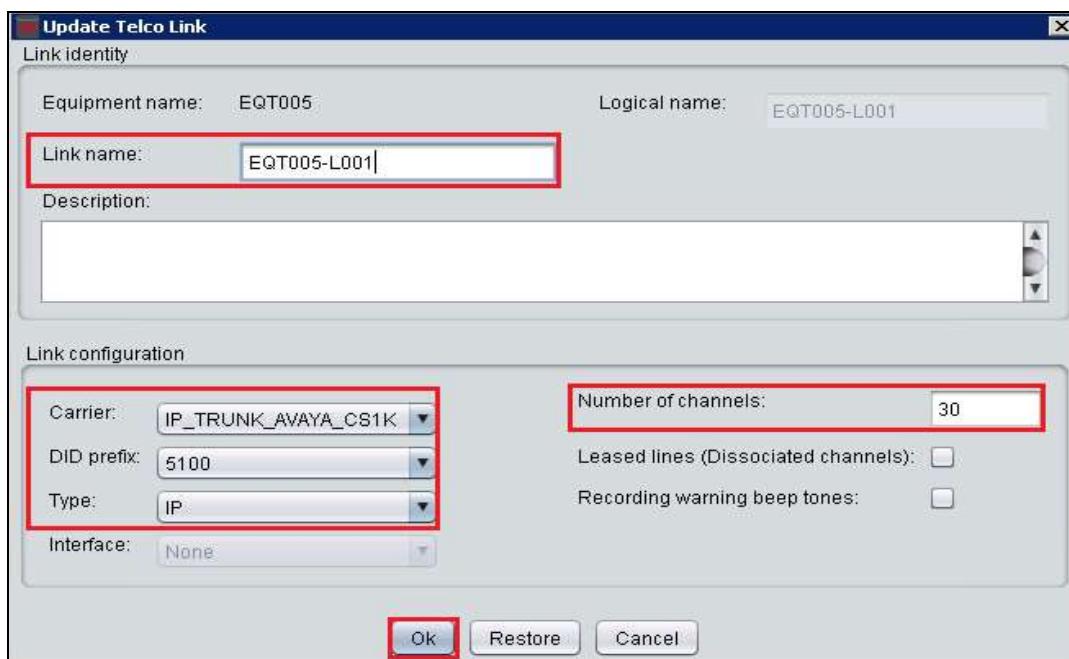

7.6. Create Link/Channels

Expand the **Link/Channels** menu item and double click the newly created Equipment created in **Section 7.4**.

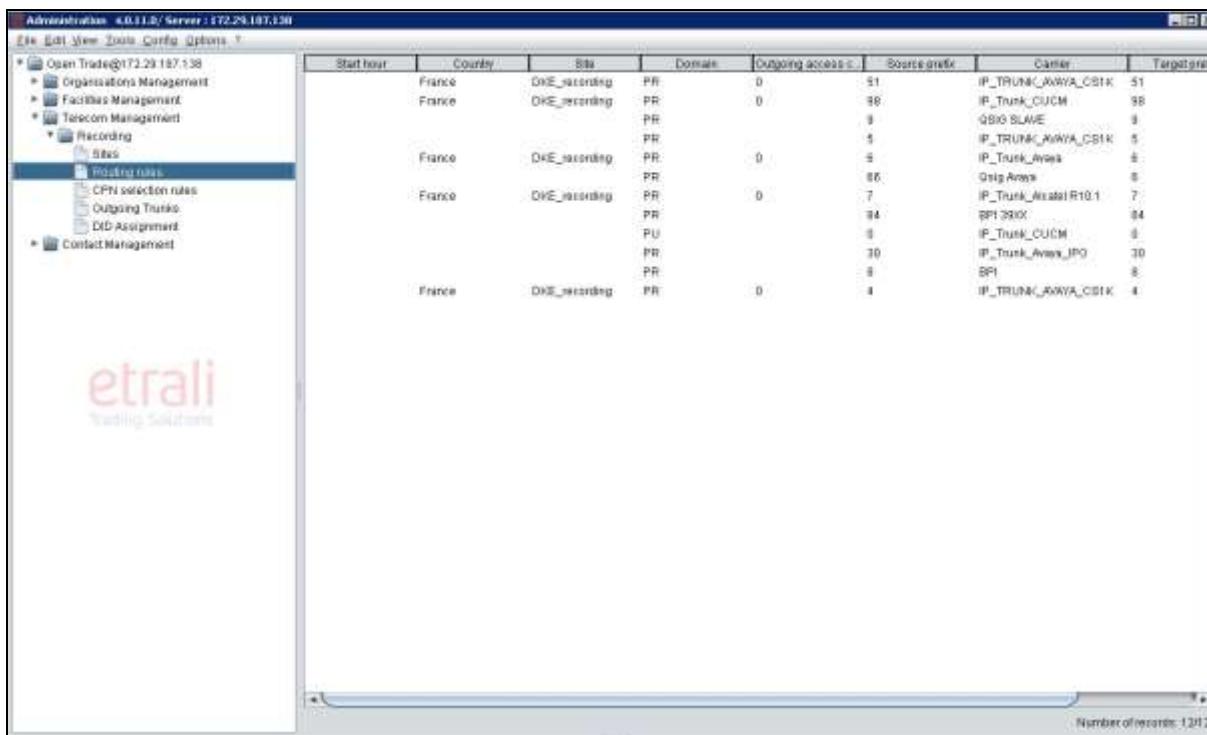

Enter the following values in the **Update Telco Link** screen which appears and click **Ok**.

- Link name** – enter an identifying name.
- Carrier** – select the Carrier created in **Section 7.1**.
- DID prefix** – select the DID prefix created in **Section 7.2**.
- Type** – select **IP** from the drop down list.
- Number of channels** – enter **30**.

7.7. Create Routing Rule

Expand the **Telecom Management** item and select the **Routing rules** menu element. Place the cursor under the first blank entry in the right hand pane and right-click to create a new routing rule to Session Manager.

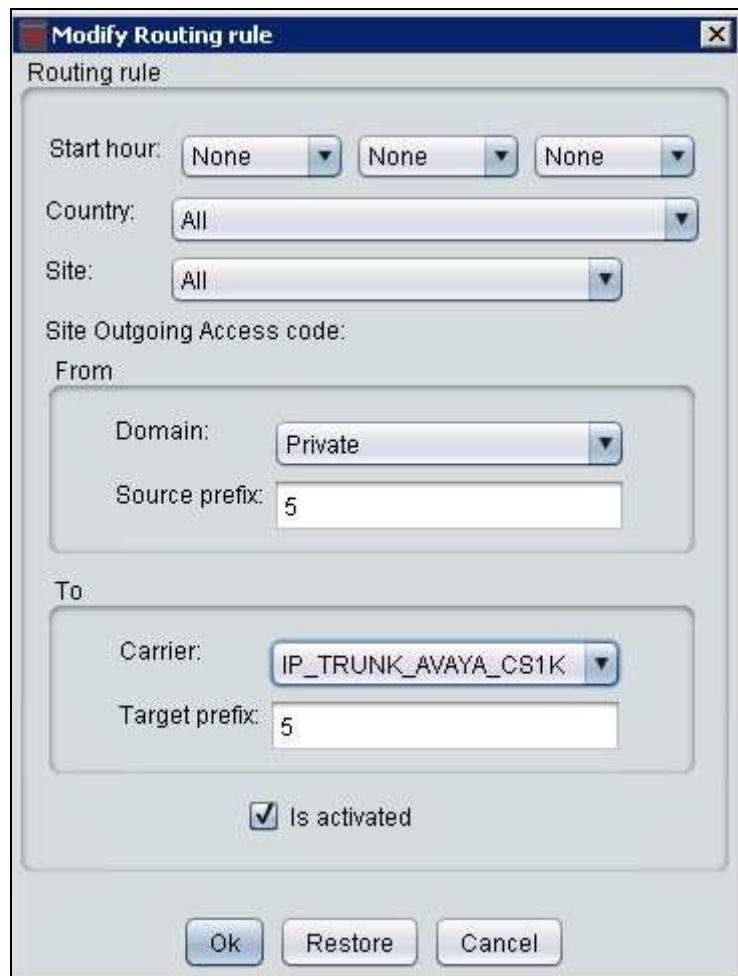

Select **Create** from the menu which appears.

Enter the following values in the **Modify Routing rule** screen which appears and click **Ok**.

- **Domain** – select **Private** from the drop down list.
- **Source prefix** – enter the first digit of the extension range configured for Avaya endpoints.
- **Carrier** – enter the Carrier configured in **Section 7.1**.
- **Target prefix** - enter the first digit of the extension range configured for Avaya endpoints.

7.8. Create Outgoing Trunk

Expand the **Telecom Management** and **Recording** items and select the **Outgoing Trunks** menu element. Place the cursor under the first blank entry in the right hand pane and right-click to create a new outgoing trunk to the Avaya solution.

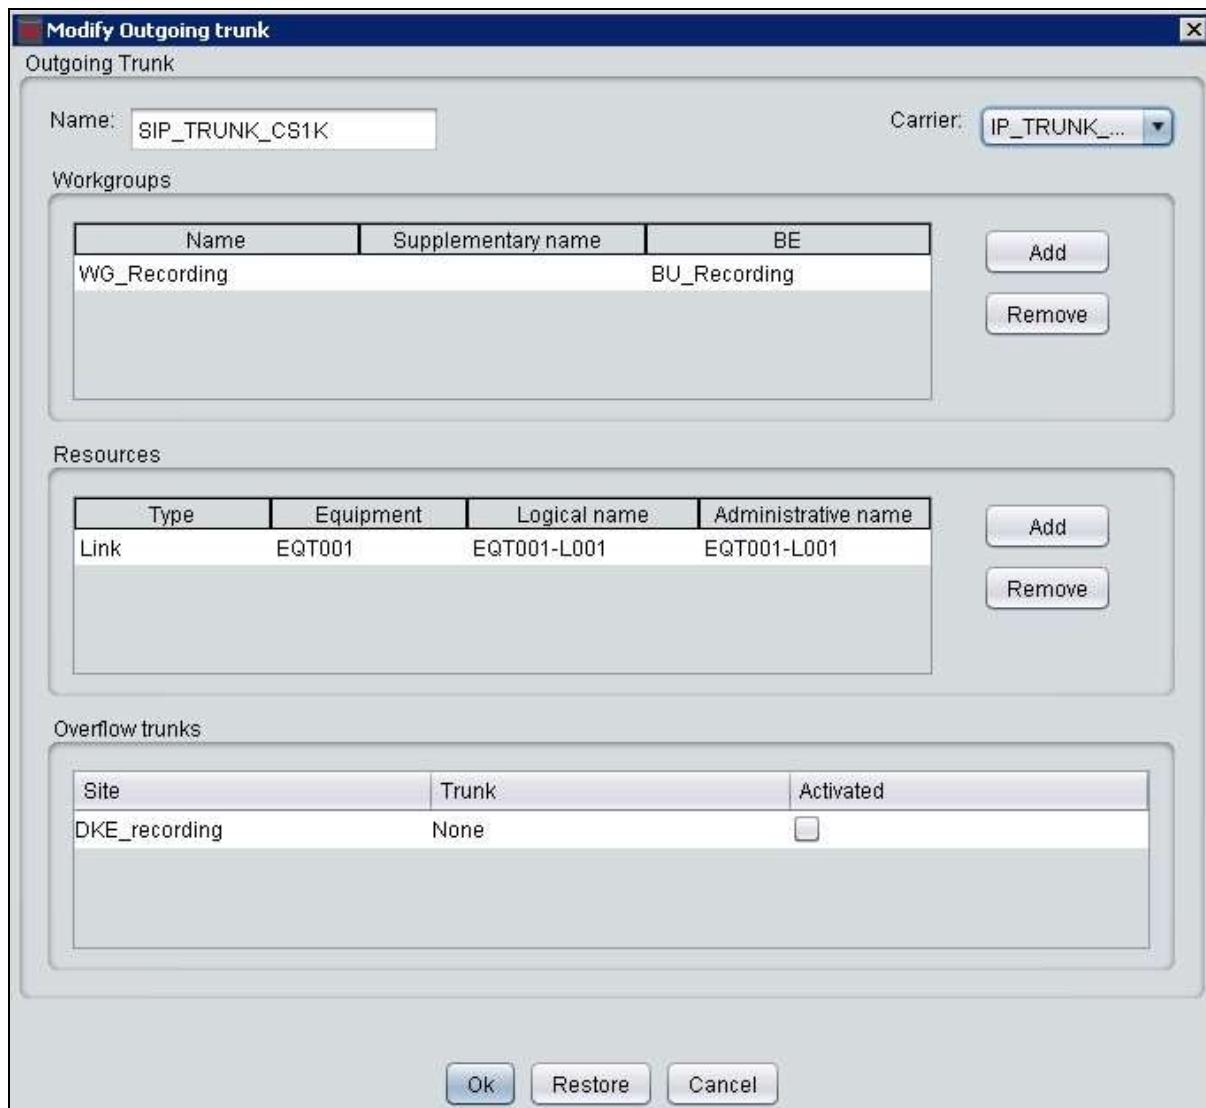

The screenshot shows the Administration interface with the title bar "Administration 4.0.11.0 / Server : 172.29.187.138". The left sidebar contains navigation items: Open Trade@172.29.187.138, Organisations Management, Facilities Management, Telecom Management (selected), Recording (selected), and Contact Management. Under Recording, Outgoing Trunks is also selected. The main pane displays a table of outgoing trunks with columns "Name" and "Carrier". The table includes entries like SIP_TRUNK_AVAYA_IPO, Qsig Avaya, MASTER TRUNK, and various SIP and IP trunk configurations. A watermark for "etrali Trading Solutions" is visible in the center-left area. At the bottom, there are tabs for Resources, Overflow trunks, and Workgroups.

Select “Create” from the menu which appears.

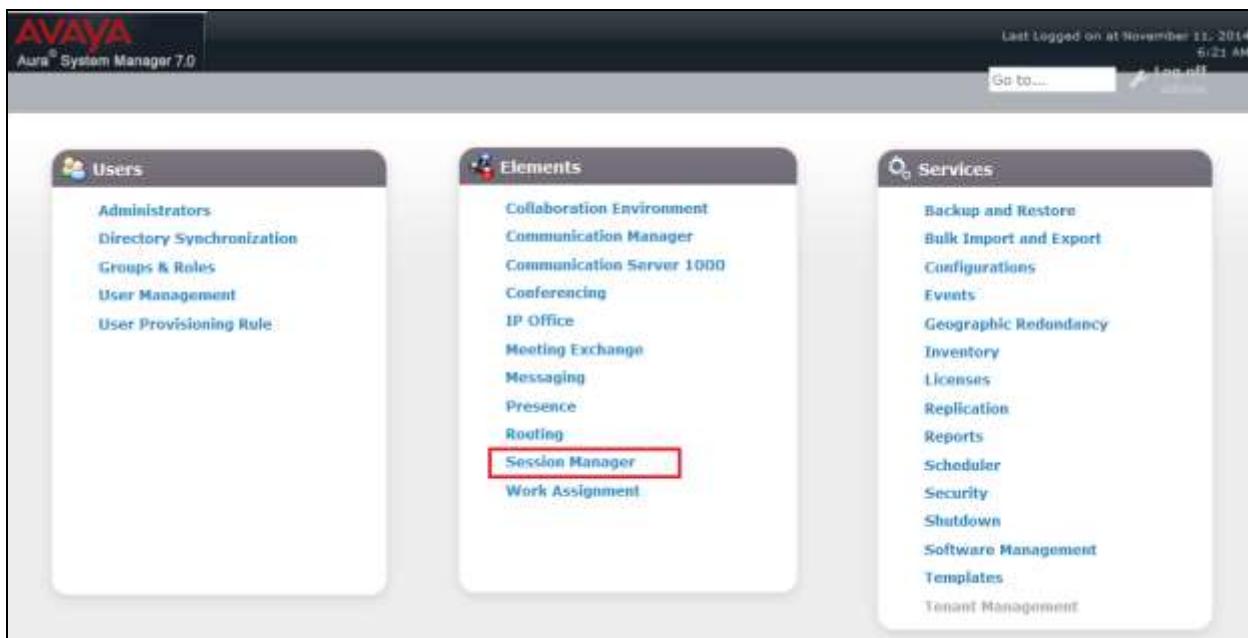

Enter the following values in the **Create Outgoing trunk** screen which appears and click **Ok**.

- **Name** – Enter a suitable name for the outgoing trunk.
- **Carrier** – select the carrier created in **Section 7.1** from the drop down list.
- **Workgroup** – add the appropriate Workgroup from the drop-down menu, this is preconfigured and the details are not covered in these Application Notes.
- **Resources** – add the peripheral equipment created in **Section 7.4**.

8. Verification Steps

To verify a successful configuration of Open Trade and CS 1000 a call is placed from CS 1000 to and from an Open Trade extension with the caller getting answered successfully and hearing clear and audible speech. The following steps can also be taken to ensure the link is up between Open Trade and Session Manager. Log into System Manager as per **Section 6**. From the main menu select Session Manager as shown below.

Navigate to **System Status** → **SIP Entity Monitoring**. Choose the SIP entities that are to be monitored from the list at the bottom of the screen. Both the CS1000 and the Etrali_OT SIP Entities should be verified. Click on the SIP Entity that is to be monitored from the list of SIP Entities at the bottom of the screen shown below.

The screenshot shows the Avaya Aura System Manager 7.0 interface. The left sidebar is collapsed, showing the following navigation paths:

- Session Manager
 - Dashboard
 - Session Manager
 - Administration
 - Communication
 - Profile Editor
- Network Configuration
- Device and Location Configuration
- Application Configuration
- System Status
 - SIP Entity Monitoring** (highlighted in red)
 - Managed Bandwidth Usage
 - Security Module Status
 - SIP Firewall Status
 - Registration Summary
 - User Registrations
 - Session Counts
 - User Data Storage
- System Tools
- Performance

The main content area displays two pages:

SIP Entity Link Monitoring Status Summary

This page provides a summary of Session Manager SIP entity link monitoring status.

SIP Entities Status for All Monitoring Session Manager Instances							
		Type	Down	Partially Up	Up	Not Monitored	Total
<input type="checkbox"/>	sm70vmpg	Core	1	0	2	0	3

Select: All, None

All Monitored SIP Entities

Run Monitor

8 Items : Refresh		Filter: Enable
		SIP Entity Name
<input type="checkbox"/>	messaging63vmpg	
<input type="checkbox"/>	cm63vmpg	
<input type="checkbox"/>	acc64SIPvmpg	
<input type="checkbox"/>	AACC70vmpg	
<input type="checkbox"/>	Etrali_OT	
<input type="checkbox"/>	sm70vmpg	
<input type="checkbox"/>	CS1000E	
<input type="checkbox"/>	IPSO99W2	

Select: All, None

8.1. Verify Open Trade SIP Entity is up

Select the **OpenTrade** SIP Entity (not shown), SIP Entity, Entity Link Connection Status is displayed and shows the status of OpenTrade SIP entity with Session Manager, make sure both **Conn Status** and **Link Status** is UP.

All Entity Links to SIP Entity: EtraII_0T							
Status Details for the selected Session Manager:							
Summary View							
1 Items	Refresh	Filter: Enable					
Session Manager Name	SIP Entity Resolved IP	Port	Proto.	Deny	Conn. Status	Reason Code	Link Status
sm70vmpa	172.29.187.244	5060	UDP	FALSE	UP	200 OK	UP

8.2. Verify the CS 1000 SIP Entity.

Repeat the steps above and verify that the link status of CS 1000 and Session Manager is UP as shown in the figure below.

SIP Entity, Entity Link Connection Status							
This page displays detailed connection status for all entity links from all Session Manager instances to a single SIP entity.							
All Entity Links to SIP Entity: CS1000E							
Summary View							
1 Items	Refresh	Filter: Enable					
Session Manager Name	SIP Entity Resolved IP	Port	Proto.	Deny	Conn. Status	Reason Code	Link Status
sm70vmpa	10.10.40.111	5060	TCP	FALSE	UP	200 OK	UP

9. Conclusion

The interoperability of Open Trade from IPC with Avaya Communication Server 1000 R7.6 and Avaya Aura® Session Manager R7.0 was successful for this specific setup in order to place calls to and from Open Trade to CS1000. All issues and observations are outlined in **Section 2.2**.

10. Additional References
