

Avaya Solution & Interoperability Test Lab

Application Notes for configuring Capita Secure Information Solutions DS3000 with Avaya Aura® Contact Center R7.0.1 and Avaya Communication Server 1000 R7.6 using a Lineside E1 connection – Issue 1.0

Abstract

These Application Notes describe the configuration steps for provisioning Capita Secure Information Solutions DS3000 to interoperate with Avaya Aura® Contact Center R7.0.1 and Avaya Communication Server 1000 R7.6 using a Lineside E1 card.

Readers should pay particular attention to the scope of testing as outlined in Section 2.1, as well as observations noted in Section 2.2 to ensure that their own use cases are adequately covered by this scope and results.

Information in these Application Notes has been obtained through DevConnect compliance testing and additional technical discussions. Testing was conducted via the DevConnect Program at the Avaya Solution and Interoperability Test Lab.

1. Introduction

These Application Notes describe the configuration steps for provisioning DS3000 from Capita Secure Information Solutions to interoperate with Avaya Aura® Contact Center R7.0.1 connected to an Avaya Communication Server 1000 R7.6 using the Application Module Link (AML). The DS3000 is an Integrated Communication Control System that is used by emergency service customers for answering 999/112 calls and then from the same application using radio communication (TETRA digital radio or analogue PMR) to pass details to mobile resources.

As a radio dispatch deployment with basic PTN/PSTN the DS3000 acts as an end PBX and performs call prioritisation and distribution to DS3000 operators as defined by the profile in which they have logged in to the DS3000 application. In this type of configuration the DS3000 has two primary connections to the Avaya Solution, a TDM connection to a Lineside E1 card on the Avaya Communication Server 1000 (CS1000) and a .net connection to the Avaya Aura® Contact Center. Control of the Lineside E1 agents is achieved via the .net connection to the Communication Control Toolkit (CCT) module on the Avaya Aura® Contact Center.

2. General Test Approach and Test Results

The interoperability compliance testing evaluates the ability of Capita's DS3000 operators logged into the lineside E1 extensions as contact center agents to answer emergency calls presented to an emergency Control Directory Number (CDN) on the CS1000. Calls placed to the emergency CDN are controlled by the contact center and are routed to the DS3000 agents by passing the caller to the Lineside E1 extensions.

Note: Non Automatic Call Distributed (ACD) calls that are destined for the DS3000 both locally and from the PSTN are routed to the DS3000 over SIP trunks using Session Manager. This configuration is described in the Application Notes titled *Application Notes for Configuring Capita Secure Information Solutions DS3000 with Avaya Aura® Session Manager R7.0.1 and Avaya Communication Server 1000 R7.6 using SIP Trunks*.

DevConnect compliance testing is conducted jointly by Avaya and DevConnect members. The jointly-defined test plan focuses on exercising APIs and/or standards-based interfaces pertinent to the interoperability of the tested products and their functionalities. DevConnect compliance testing is not intended to substitute full product performance or feature testing performed by DevConnect members, nor is it to be construed as an endorsement by Avaya of the suitability or completeness of a DevConnect member's solution.

2.1. Interoperability Compliance Testing

The interoperability compliance testing focuses on various technical testing scenarios to verify the usage of DS3000 with the Avaya solution. In addition, serviceability tests were also performed to assess the reliability and accuracy of the joint solution. The testing focused on the following types of calls:

- **Login/Logout Agents using DS3000** – Ensure agents can log in and out of the Lineside E1 channels or lines from the DS3000 Operators console.
- **ACD calls into the DS3000 Operators** – Ensure that ACD calls are correctly routed to DS3000 operators.
- **Hold/transfer and conference functionality for ACD calls** - Verify that non ACD calls can be placed on hold and transferred and conferenced.
- **Calling to voicemail** – Verify that DTMF tones can be sent. Note that Avaya Callpilot was used as voicemail.
- **Serviceability testing** - Verify the behaviour of DS3000 application under different simulated LAN failure conditions on the Avaya platform.

2.2. Test Results

All Test Cases passed except for the following issues.

1. Call from CS1000E to ACD/CDN, initiate a blind or supervised transfer to another CS1000E extension.
When dialing in from a SIP phone, the DS3000 Operator ‘stalls’ once the transfer button is pressed, the call cannot proceed any further. The SIP phone can hang up and a new call can be presented correctly from another type of phone set. The operator gets a “please wait” on the screen and nothing happens. The operator is left with dial tone but can hang up on the original caller.

The following observation was also noted.

- FTTU is set on the Class of service (CLS) of each Lineside E1 TN. FTTU means Flexible Trunk to Trunk Connections Unrestricted and this creates trunk to trunk connections for both Conference and Transfer so that when calling in from the PSTN transfer across the SIP trunk is allowed.

2.3. Support

Support from Avaya is available by visiting the website <http://support.avaya.com> and a list of product documentation can be found in **Section 11** of these Application Notes. Technical support for the Capita DS3000 product can be obtained as follows.

- Tel : + 44 (0) 8456 041999
- Email: csis.info@capita.co.uk

3. Reference Configuration

Figure 1 shows the setup for compliance testing Capita's DS3000 with Contact Center R7.0.1 connecting to the CCT module in order to control agents logged into the Lineside E1 extensions on the CS1000. ACD calls are passed through the Lineside E1 card where they can be answered by the DS3000 operators acting as Contact Center agents.

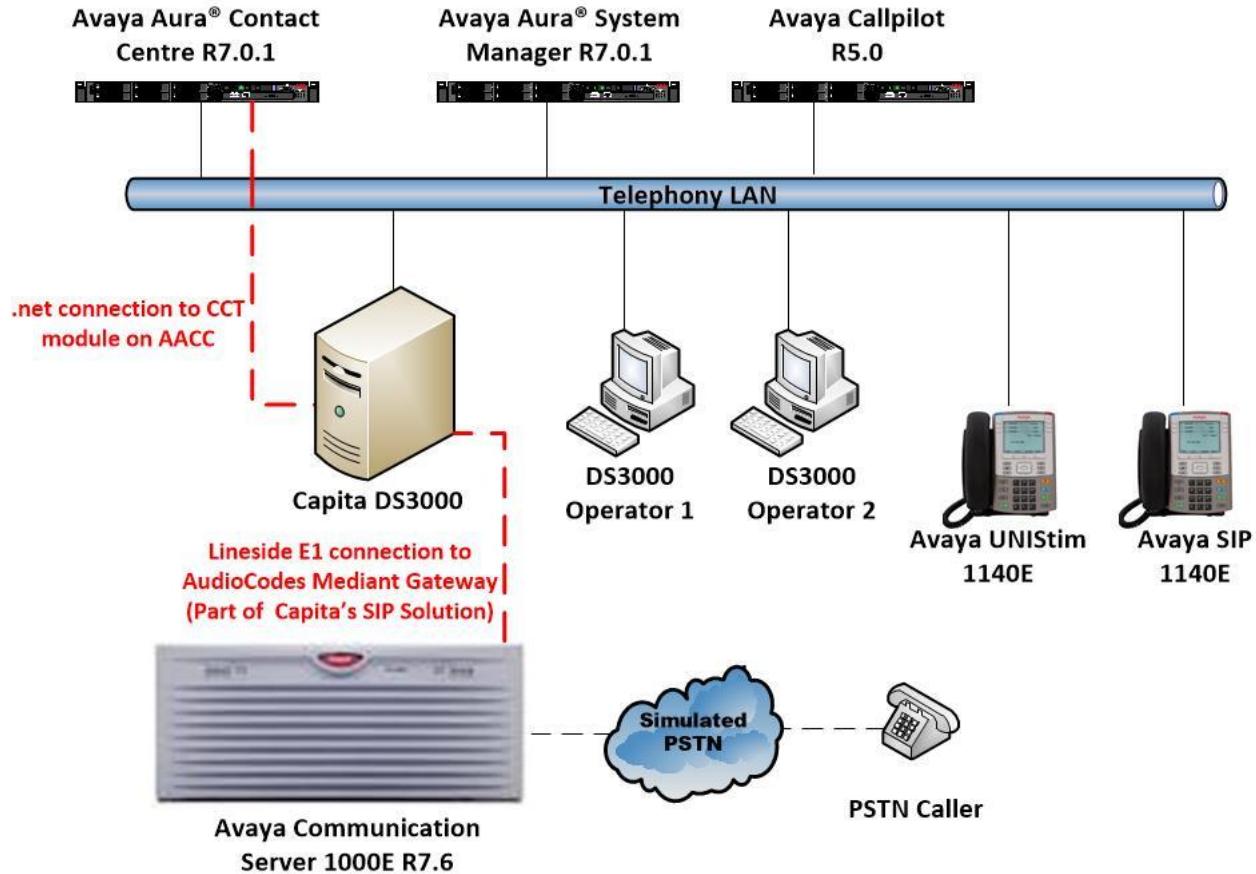

Figure 1: Connection of Capita DS3000 with Avaya Aura® Contact Center R7.0.1 and Avaya Communication Server 1000E R7.6

4. Equipment and Software Validated

The following equipment and software was used for the compliance test.

Device Description	Versions Tested
Avaya Aura® Contact Center running on an Windows 2012 R2 Server	R7.0.1.0 Feature Pack 1
Avaya Communication Server 1000 running on CPPM	R7.6 (See Appendix A for Patch details)
Avaya Aura® System Manager running on a virtual server	System Manager 7.0.1.2 Build No. - 7.0.0.0.16266 Software Update Revision No: 7.0.1.2.086007 Service Pack 2
Avaya Call Pilot 600r Server	Avaya Call Pilot Version 5.00.41 Patch Line-up: CP50041SU08S CP500508G09C
Avaya 1140 UNIStim Deskphone	UNIStim V0625C8Q
Avaya 1140 SIP Deskphone	SIP 04.04.28.04
Capita DS3000 Solution Kit (DSX Converged Versions 2017 R1 and later) - Aculab Dual Redundant SIP Server - Centricity V2 - AudioCodes Mediant 2000	Release 33x Series V6.6.4 V3.21.14.1 V6.40A.029.008

5. Configure Avaya Communication Server 1000

It is assumed that a fully functioning CS1000 is in place with the necessary licensing and with an ELAN connection to the Contact Center already in place. For further information on the configuration of CS1000 please see reference [1] in **Section 11** of these Application Notes. “PuTTY” is used to administer the CS1000. Using PuTTY, open an SSH Session to the Node IP address of the CS1000, log in to the CS1000 Linux application using the appropriate credentials and type **cslogin** (not shown) to gain access to the PBX command line.

Note: A simulated PSTN connection was present on the CS1000 in the form of a QSIG ISDN connection, the configuration of which is outside the scope of these Application Notes.

5.1. Create Automatic Call Distribution Queue

An Automatic Call Distribution (ACD) queue must be created in order to log in the Lineside E1 agents. Enter overlay 23 to add a new **ACD** by typing **LD 23** at the > prompt. Ensure the following are set. Note that the default setting is accepted by pressing return at each prompt.

Prompt	Response	Description
>	LD 23	Enter Overlay 23
REQ	new	new/add
CUST	0	Customer number (default is 0)
TYPE	ACD	Automatic Call Distribution
ACDN	1650	ACD Number (any unused number)
MAXP	10	Maximum number of persons in the Queue (10)
.....		Return until next prompt
NCFW	3200	Night call forward number (call 3200 if out of service)]
.....		Return until next prompt
HMSB	YES	Hold Make Set Busy (Allowed)
.....		Return until next prompt
HOML	YES	Headset Or MSB key Log Out (Allowed)
.....		Return until next prompt
NRAC	YES	Enable Not Ready Activity Codes
Return to end		

5.2. Create a Controlled Directory Number to route calls

A Controlled Directory Number (CDN) must be created in order to route emergency calls to the Lineside E1 agents. Enter overlay 23 to add a new **CDN** by typing **LD 23** at the > prompt. Ensure the **DFDN** is set to that of the ACD queue created in **Section 5.1**. Note that the default setting is accepted by pressing return at each prompt.

Prompt	Response	Description
>	LD 23	Enter Overlay 23
REQ	new	new/add
CUST	0	Customer number (default is 0)
TYPE	CDN	Controlled Directory Number
CDN	6100	ACD Number (any unused number)
.....		Return until next prompt
DFDN	1650	Default DN is set to the ACD Queue created in Section 5.2
.....		Return until next prompt
Return to end		

5.3. Create Lineside E1 Agents

E1 lineside card switch settings are as follows:

- Lineside E1,S1: Set all the dip switches to OFF
- Lineside E1,S2: Set dip switch 3 to ON and set all the other dip switches to OFF

Lineside E1 Agents are created in overlay 20. For compliance testing three lineside E1 agents were created and the following TN's, DN's and position ID's were used.

TNB	DN	POSID
• 4 0 10 0	3100	1113100
• 4 0 10 1	3101	1113101
• 4 0 10 3	3102	1113102

Prompt	Response	Description
>	LD 20	Enter Overlay 20
REQ	new	new/add
TYPE	500	"500" type set - (used for Lineside E1)
TNB	4 0 10 0	Loop Shelf Card Unit
DN	3100	Private Directory Number (any unused number)
AST	YES	Associate Set assignment
IAPG	1	Meridian Link Unsolicited Status Message (1 is on)
.....		Return until next prompt
CLS	UNR	Unrestricted (note this was only set for testing purposes)
	XFA	Transfer Allowed
	C6A	Conference Allowed
	CFXA	Call Forward External Allowed
	AGTA	ACD services for 500 type telephones allowed
	DDGA	DN display on other set Allowed.
	NAMA	Name display Allowed
	FTTU	Trunk to Trunk Connections unrestricted
.....		Return until next prompt
AACD	YES	Associate set (AST) ACD telephone
AACS	YES	Application acquired set
.....		Return until next prompt
FTR	ACD 1650 x	ACD Queue created in Section 5.1 with Position ID x
FTR	OSP 1	Enable answer and disconnect supervision for outgoing calls
FRT	ISP 255	Enable hook flash disconnect supervision with flash timer
Return to end		

Note: A full printout of the TN and CDN can be found in **Appendix B**.

6. Configuration of Avaya Aura® Contact Center

It is assumed that a fully functioning Contact Center is already in operation and so these Application Notes do not go through the setup of the Contact Center from the beginning but rather what steps are required in order to ensure that calls are routed to the DS3000 agents and that DS3000 agents can log in to Lineside E1 extensions and take control. For more information on the setup and configuration of Contact Center please refer to reference [2] in **Section 11** of these Application Notes.

Log in to the Contact Center by opening a web session (not shown) to the Contact Center server and enter the proper credentials and click on the **Login** button.

The screenshot shows the Avaya Contact Center - Manager login interface. At the top left is the AVAYA logo. In the center, the title "Contact Center - Manager" is displayed above a "Login" section. Below the section title, there are two input fields: "User ID" and "Password", both of which are enclosed in a red rectangular box. To the right of these fields is a "Login" button, which is also highlighted with a red rectangular box. At the very bottom right of the page is another small "Login" button. The top right corner of the page contains links for "About" and "Change Password".

6.1. Contact Center Configuration

Select **Configuration** as highlighted below.

The screenshot shows the Avaya Contact Center - Manager Launchpad interface. At the top left is the AVAYA logo. In the center, the title "Contact Center - Manager" is displayed above a "Launchpad" section. Below the section title, there is a list of management modules, each preceded by a circular icon. The modules listed are: Contact Center Management, Access and Partition Management, Real-Time Reporting, Historical Reporting, Call Recording and Quality Monitoring, Configuration, Scripting, Emergency Help, Outbound, and Multimedia. The "Configuration" module is highlighted with a red rectangular box. The top right corner of the page contains links for "About", "Audit Trail", and "Help".

A CDN for emergency calls should be added in order to route the emergency calls to the agents. To add a CDN to the Contact Center click on **CDN's (Route Points)** in the left window and enter the CDN details in the right window ensure that **Acquired?** is clicked. Note this will be the same CDN as was created in **Section 5.2**.

Name	Number	Call Type	Acquired?	Status
Capita6100	6100	Local	<input checked="" type="checkbox"/>	Acquired
North6101	6101	Local	<input checked="" type="checkbox"/>	Acquired
North6102	6102	Local	<input checked="" type="checkbox"/>	Acquired
North6103	6103	Local	<input checked="" type="checkbox"/>	Acquired
North6104	6104	Local	<input checked="" type="checkbox"/>	Acquired
*			<input type="checkbox"/>	

Click on **IVR ACD-DNs** in the left window and enter the ACD number that was created in **Section 5.1**.

Name	Number	Threshold Class	Acquired?	Status
Default_IVRQ	999	IVR_Template	<input type="checkbox"/>	Not Acquired
1650	1650	IVR_Template	<input checked="" type="checkbox"/>	Acquired
*			<input type="checkbox"/>	

To add the Lineside E1 extensions click on **Phonesets and Voice Ports** in the left window. Add the TN's that were created in **Section 5.3**.

The screenshot shows the AVAYA Configuration interface. The left sidebar lists various system components under the node 'AACC63VMPG'. The 'Phonesets and Voice Ports' item is selected and highlighted with a red box. The right pane displays a table titled 'Phonesets/Voice Ports' with the following data:

Name	Type	Address	Channel	IVR Name	Acquired?	Status
4-0-10-0	Agent	4-0-10-0			<input checked="" type="checkbox"/>	Acquired
4-0-10-1	Agent	4-0-10-1			<input checked="" type="checkbox"/>	Acquired
4-0-10-2	Agent	4-0-10-2			<input checked="" type="checkbox"/>	Acquired
96-0-U-4	Agent	96-0-U-4			<input checked="" type="checkbox"/>	Acquired
96-0-0-5	Agent	96-0-0-5			<input checked="" type="checkbox"/>	Acquired
96-0-0-6	Agent	96-0-0-6			<input checked="" type="checkbox"/>	Acquired
*					<input type="checkbox"/>	

In order to route the emergency calls to the agents, emergency skillsets must be added. Click on **Skillsets** in the left window and enter the information for the skillset in the right window.

The screenshot shows the AVAYA Configuration interface. The left sidebar lists various system components under the node 'AACC63VMPG'. The 'Skillsets' item is selected and highlighted with a red box. The right pane displays a table titled 'Skillsets' with the following data:

Contact Type	Prefix	Skillset Name	Default Activity Code	Threshold Class	Call Age Preference
Voice_Mail	VM_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
SMS	SM_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Fax	FX_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Scanned_Document	SD_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
OpenQ	OQ_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Predictive_Outbound	PR_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Outbound	OB_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Web_Communications	WNC_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
EMail	EM_	Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Voice		Default_Skillset	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Voice		EmergOpp	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Voice		Non_EmergOpp	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Voice		Admin1	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
Voice		Public	00_Skillset_Default_Activity_Code	Skillset_Template	First In Queue
*					

6.2. Contact Center Agents

Select **Contact Center Management** shown below. All the Agent details are configured in this section.

Click on **Add** highlighted and select new (not shown). Enter a suitable name and **Login ID** for the new agent. Ensure that Voice is selected for the Contact Type (not shown) and add the skillset created in **Section 6.1** above. Click on **Submit** once all the details are entered correctly.

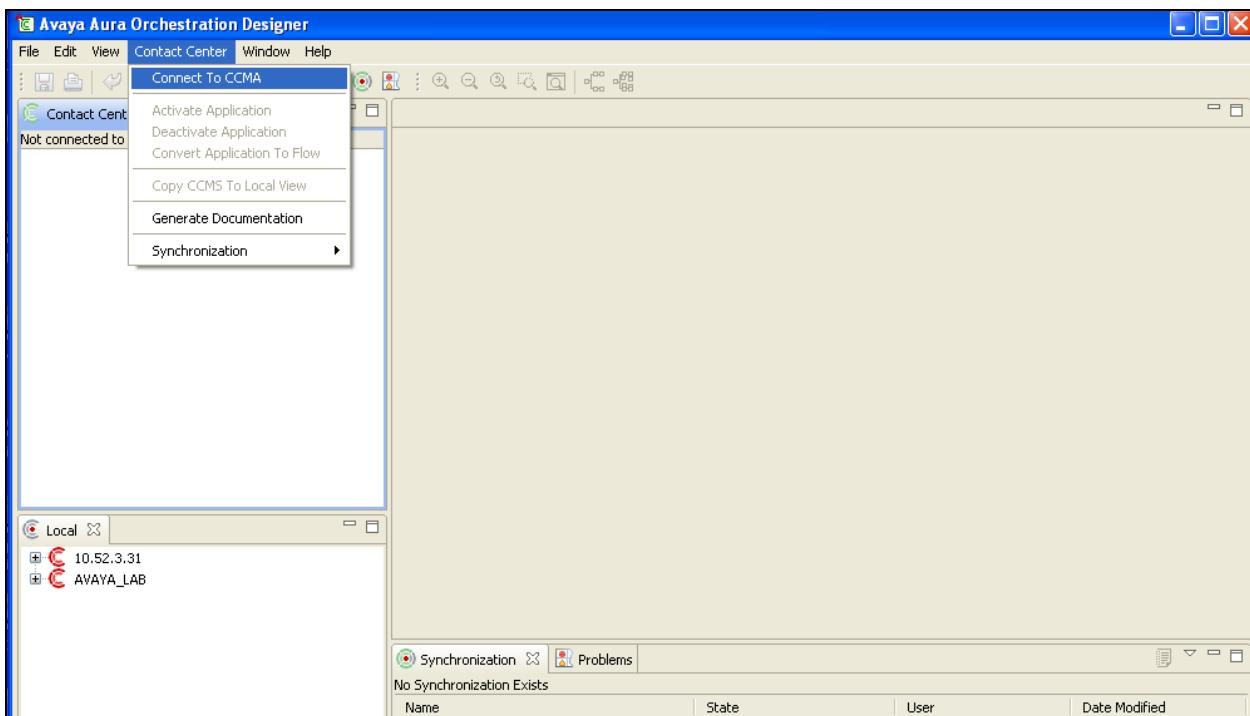

The screenshot shows the 'Contact Center Management' page with the 'Add' tab selected. On the left, there's a tree view under 'CCM Servers (Supervisors)' showing nodes like 'AA0003VM0G' and 'Supervisor PGTest'. The main area has sections for 'User Details', 'Agent Information', 'Contact Types', and 'Skillsets'. In 'User Details', fields include First Name (Test1), Last Name (Disp1), User Type (Agent), Login ID (9111, highlighted with a red box), and Language (English). In 'Agent Information', fields include Primary Supervisor (Supervisor PGTest), Agent Key, Login Status (Logged Out), Call Presentation (Call_Centre_Administrator), Threshold (Agent_Template), and Tn Name. In 'Contact Types', there's a dropdown menu. In 'Skillsets', a table lists skillsets: 'Default_Skillset' (Priority 5) and 'EmergOpp' (Priority 1, highlighted with a red box). At the bottom, there are 'Clear', 'Submit' (highlighted with a red box), 'Create New', and 'Create Many' buttons.

Note: The Lineside E1 DN associated with the agent created can be entered as the **Personal DN** as it has been observed that if a Lineside E1 call is cleared from the DS3000 whilst the call is held prior to transfer and before the consultative call digits are dialled, the Contact Centre call will be re-routed to the next available agent by the CS1000. This routing will be based on the ACD queue associated with the Lineside E1 and may result in the call being presented to an agent who does not have the appropriate skills. A workaround for this is achieved by configuring Personal DN settings for each Contact Center Agent such that agents with compatible skillsets use a common **Personal DN** so that calls are routed to suitable logged on agents.

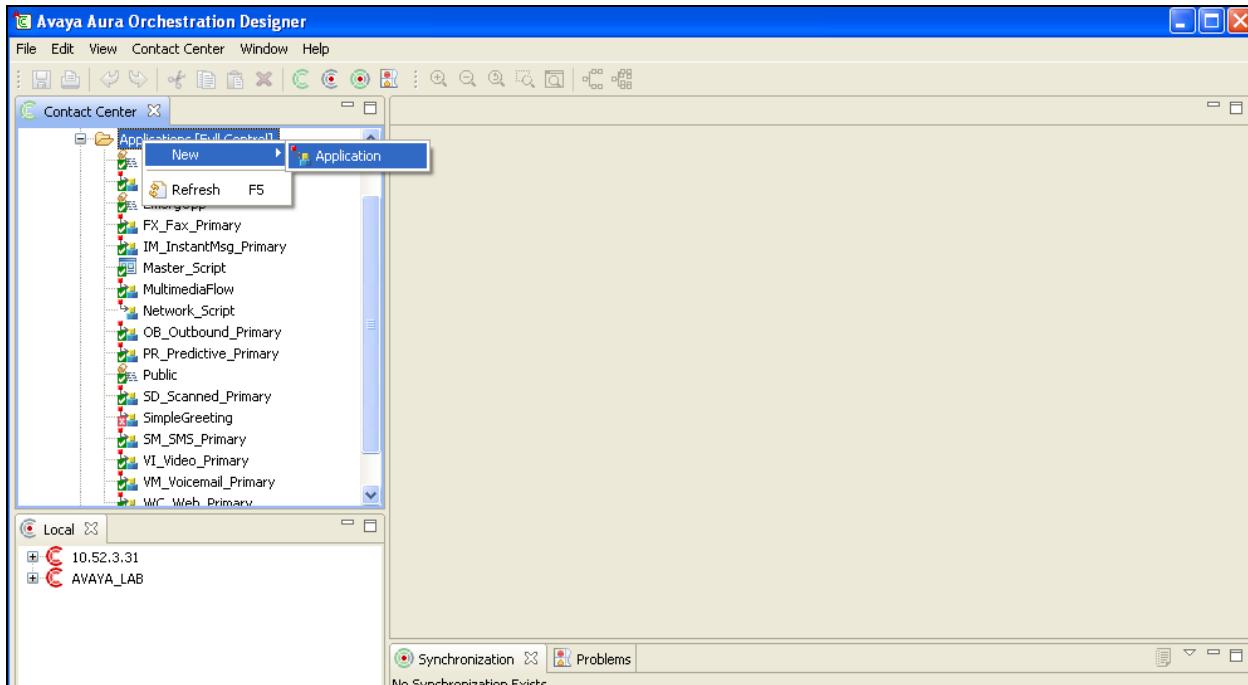

6.3. Creating an Application for emergency routing

All routing changes are done using Orchestration Designer, this allows Applications or Scripts to be created and associated with a CDN or route point. The download and initial setup of Orchestration Designer is outside the scope of these Application Notes, for information on the setup and configuration of Orchestration Designer please refer to reference [2] in **Section 11** of these Application Notes.

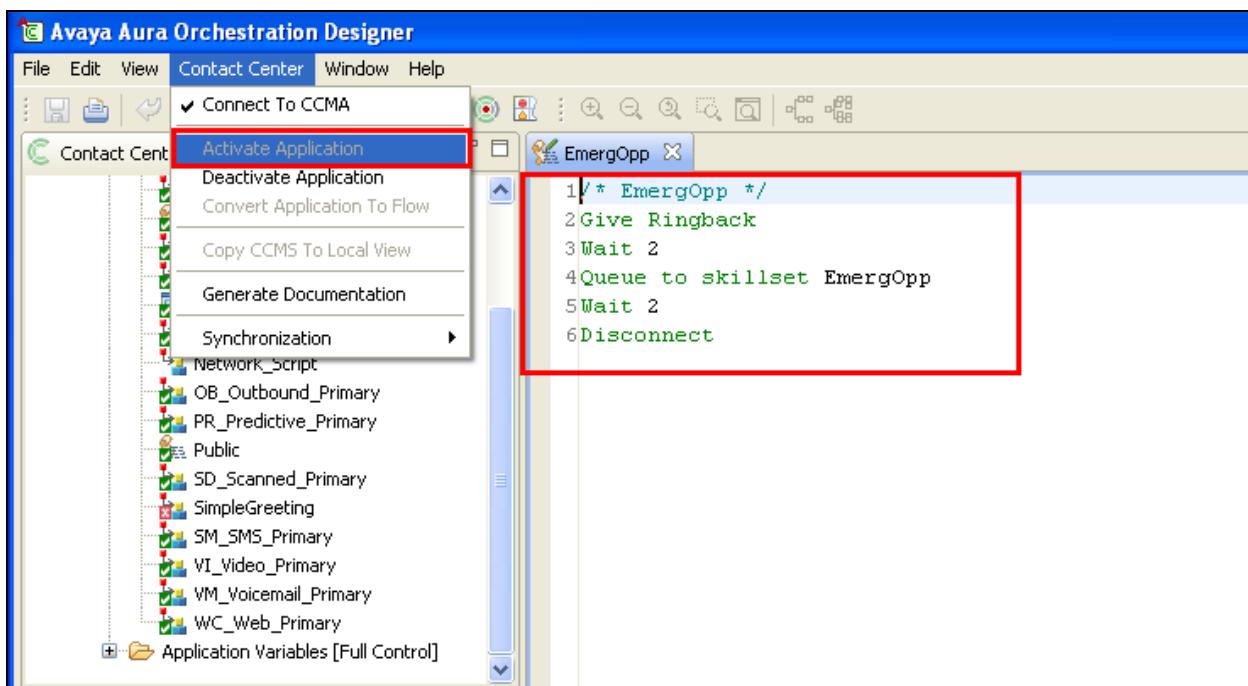

A new application was created for the routing of emergency calls and this is associated with the CDN created on the CS1000 in **Section 5.2**. Open Orchestration Designer (not shown) and **Connect to CCMA** as shown below.

Navigate to **Applications** in the left window and right click and select **New → Application** as shown below.

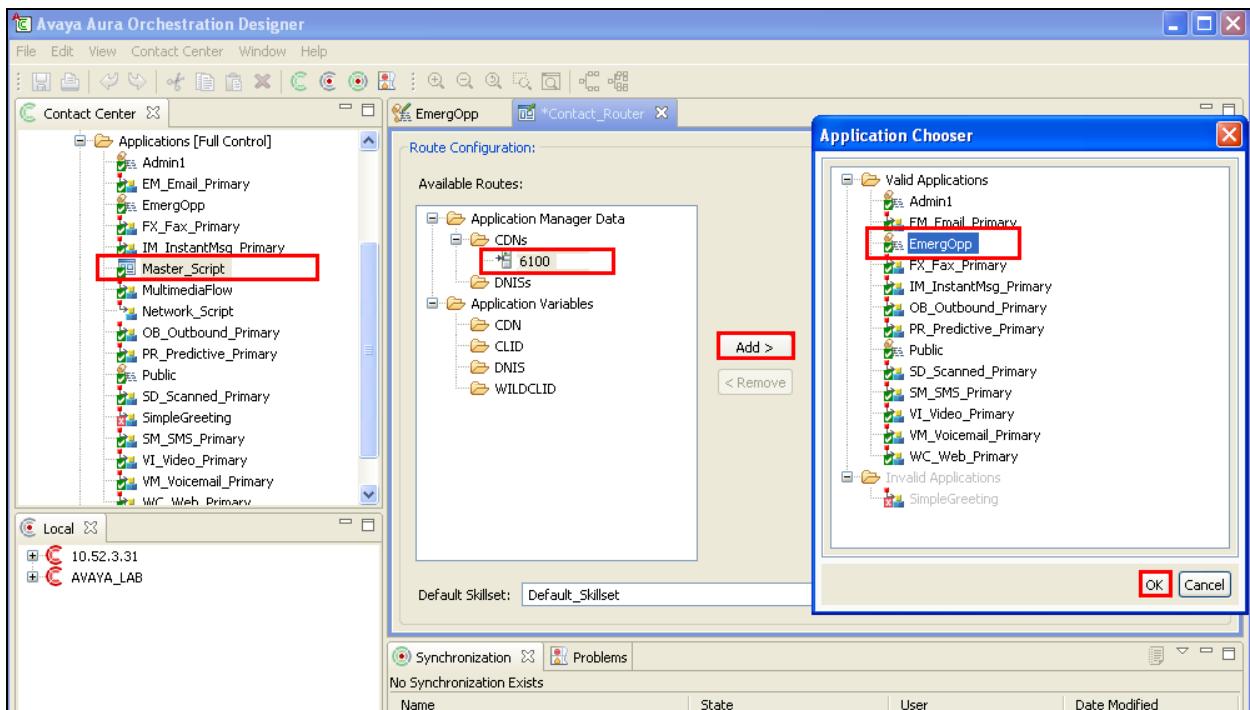

Below shows an example of a script used to route calls to a skillset. Once this is completed select **Contact Center** and **Activate Application** as shown below in order to make this active.

6.3.1. Associate an Application with a CDN

In order to associate an application with a CDN, the master script must be opened as shown below. Double click on **Master_Script** in the left window. In the main window expand on **Application Manager Data → CDNs** select the required CDN and click on **Add** as shown below. Once this is selected a new window **Application Chooser** opens where the Application to be associated with this CDN is chosen as is shown below. Click on **OK** once this is done.

6.4. Import CS1000 Information to Communication Control Toolkit

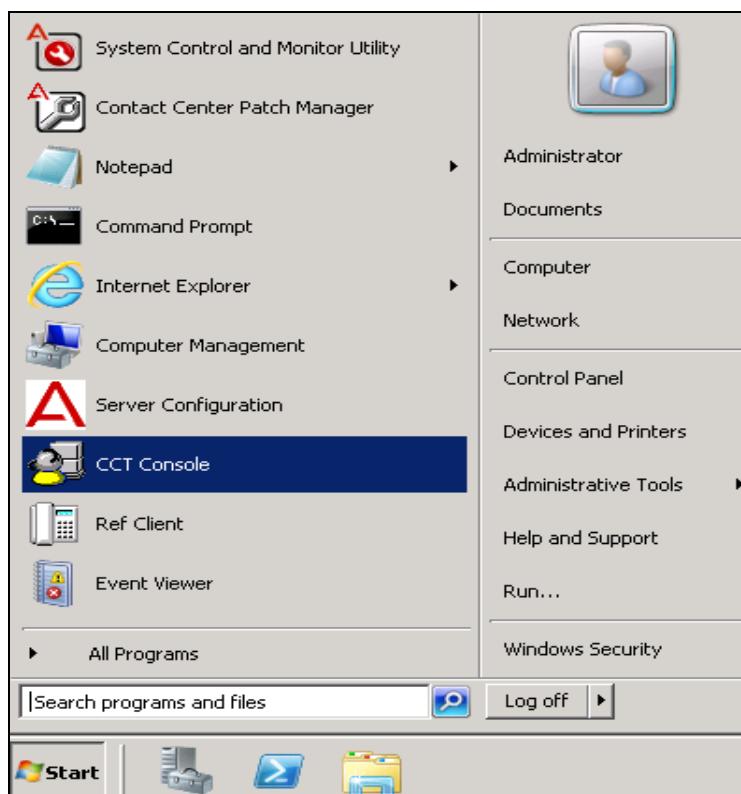

From the CS1000 take a printout of the Lineside E1 channels and the CDN using the **prt** command in overlay 20. This printout should be saved to notepad so as these TN's can then be imported into CCT as a file, such as **CS100076LE1.txt**.

Prompt	Response	Description
>	LD 20	Enter Overlay 20
REQ	prt	Print
TYPE	TN	Print the Terminal Number (TN)
TN	4 0 10 0	Terminal Number 4 0 10 0
.....		Return to end

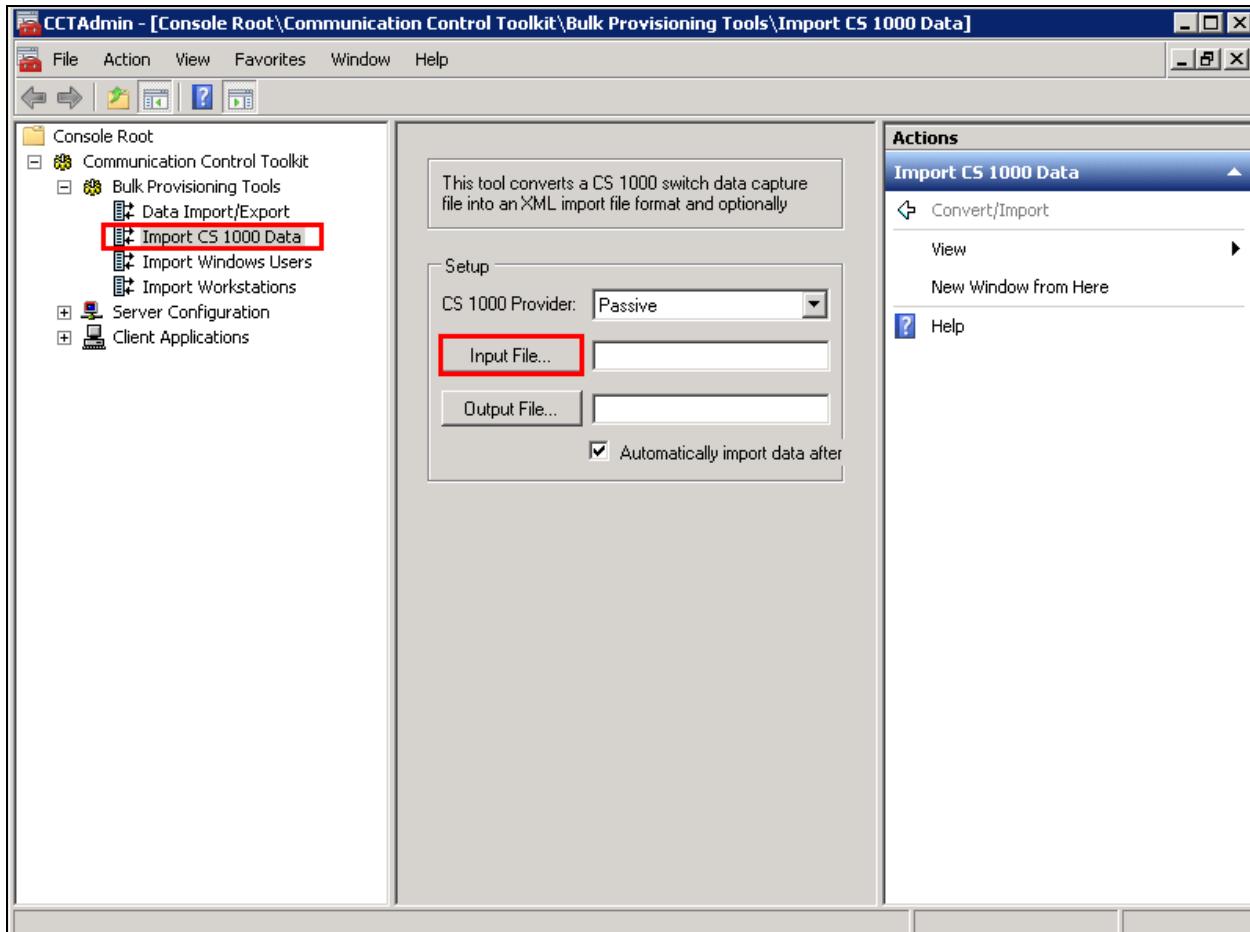

A printout of the CDN (in our example **6100**) is also required. Go to overlay 23 to print the **CDN** and ensure this is saved on the same file as above **CS100076LE1.txt**. A full printout of both a Lineside E1 channel and the CDN can be found in **Appendix B**.

Prompt	Response	Description
>	LD 23	Enter Overlay 23
REQ	prt	Print
TYPE	CDN	Print the Control Directory Number (CDN)
CUST	0	Customer 0
CDN	6100	CDN 6100
.....		Return to end

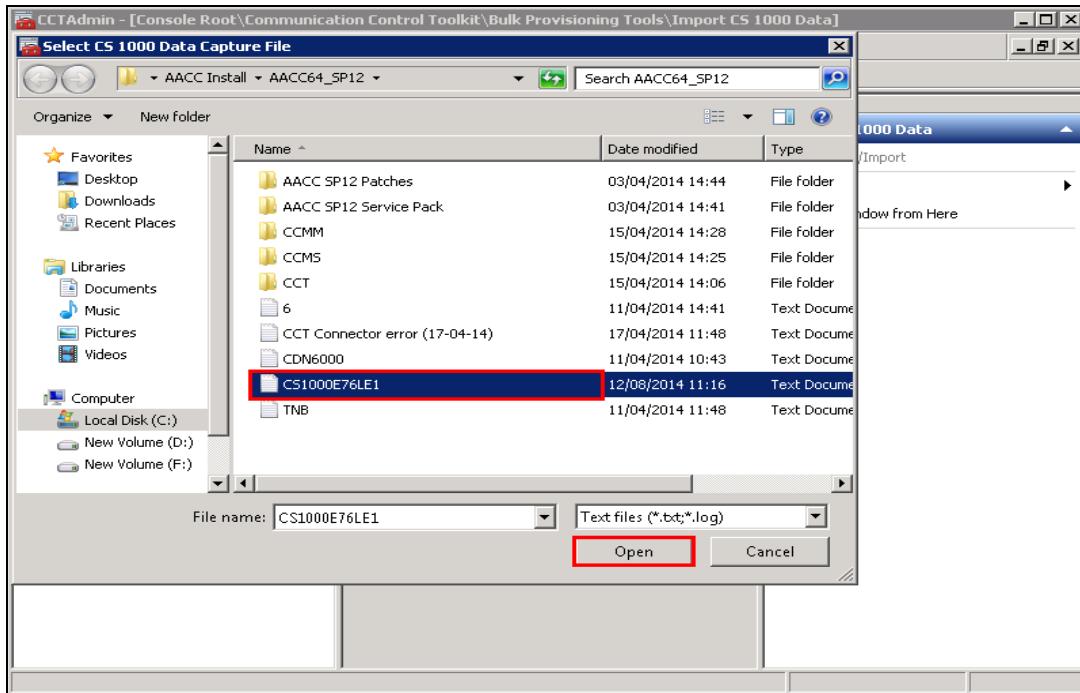

From the CCT server navigate to **Start → Programs → CCT Console**.

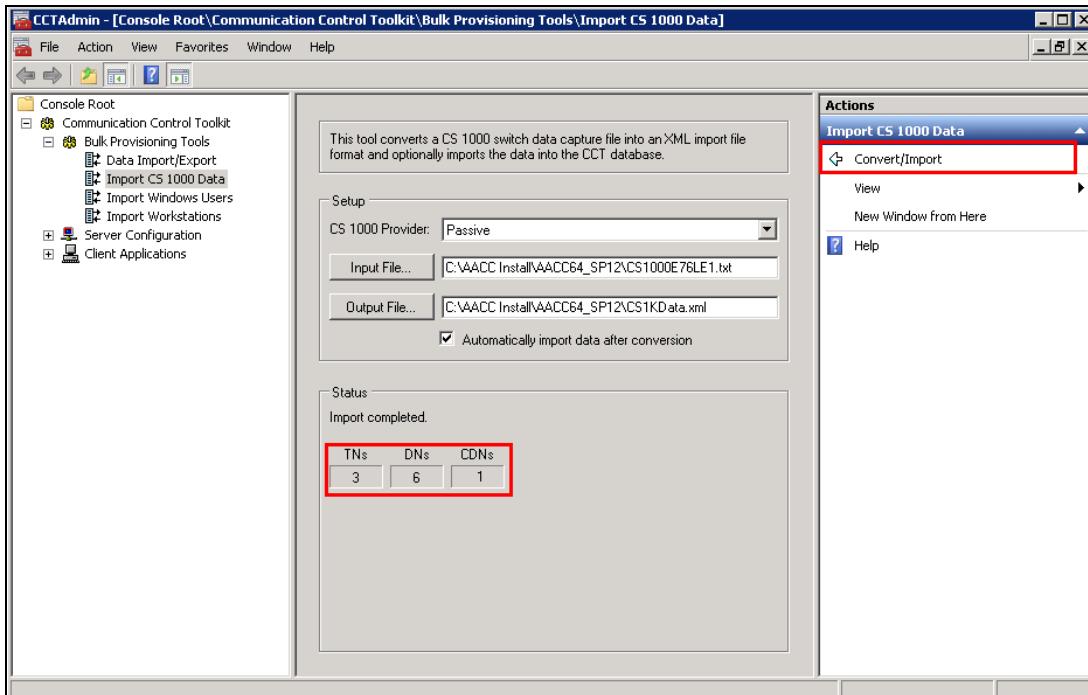

The **CCTAdmin** window is opened, in the left window click on **Import CS 1000 Data** and from the middle window click on **Input File...**

Navigate to the location of the **CS1000E76LE1.txt** file that was created from the beginning of this **Section 6.4.**

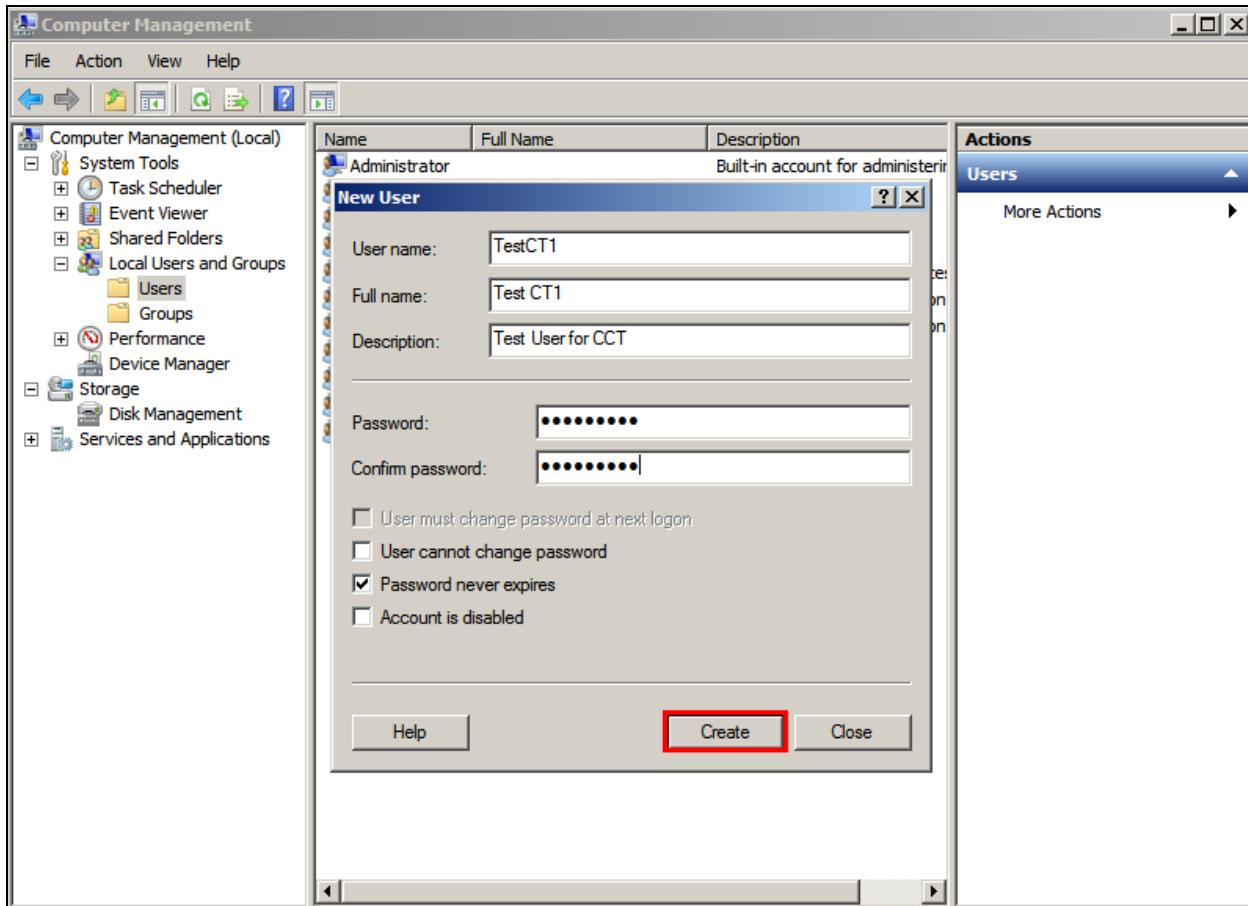

From the right window, click on **Convert/Import**, and in the main window the result of the import should be displayed as shown below where three TN's and one CDN was imported correctly.

6.5. Configure CCT Users on the Contact Center Server

Navigate to **Computer Management**, (not shown) and select **Users** from the left window and right-click and select **New User**. Enter a suitable user name and password for this new user. Click on **Create** once this user information is entered. Any user that will be created in CCT must also be added here.

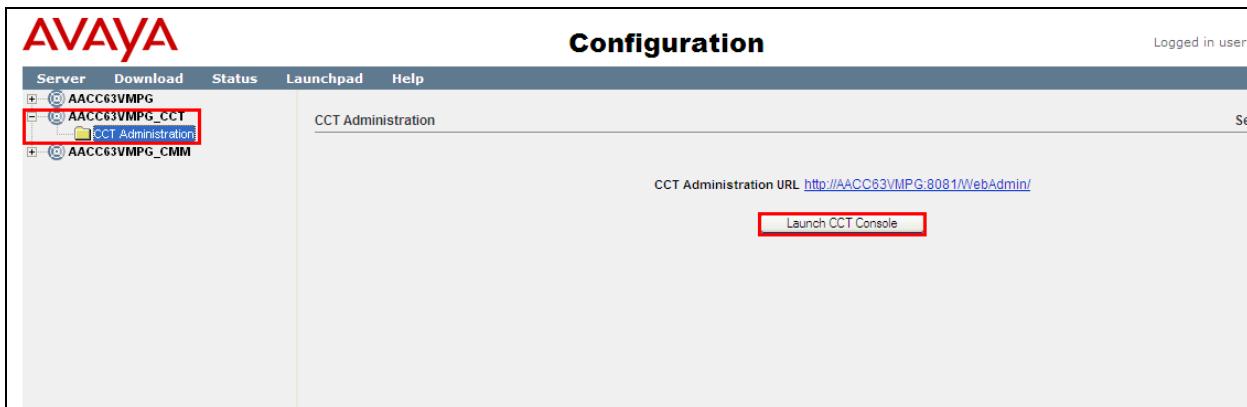

6.6. Configuring Communication Control Toolkit

One user is added to CCT in order to monitor the Lineside E1 channels and the CDN that were imported in **Section 6.4**.

In order to make changes in CCT navigate to configuration from **Launchpad** as shown below.

Once in **configuration**, open the CCT server in the left window and click on **Launch CCT Console** in the right window.

6.6.1. Configure Terminals

Navigate to **Providers → Passive → Terminals** in the left window. Click on each of the Lineside E1 channels separately.

The screenshot shows the AVAYA CCT Administration interface. On the left, there is a navigation tree with the following structure:

- Users
- Workstations
- Groups
- Providers
 - Passive
 - Addresses
 - Terminals**
 - IVRs

The "Terminals" node under "Passive" is highlighted with a red box. The main panel displays a table titled "Terminals" with the following data:

Name	Type	Enabled	Action
Line 100.0.0.1	AGENT	true	[checkbox]
Line 100.0.0.2	AGENT	true	[checkbox]
Line 100.0.0.3	AGENT	true	[checkbox]
Line 100.0.0.4	AGENT	true	[checkbox]
Line 100.0.0.5	AGENT	true	[checkbox]
Line 100.0.0.7	AGENT	true	[checkbox]
Line 100.0.0.17	AGENT	true	[checkbox]
Line 100.0.0.6	AGENT	true	[checkbox]
Line 100.0.2.20	AGENT	true	[checkbox]
Line 4.0.10.0	AGENT	true	[checkbox]
Line 4.0.10.1	AGENT	true	[checkbox]
Line 4.0.10.2	AGENT	true	[checkbox]

Below the table, it says "12 Terminals found, displaying 12 Terminals. Page 1 / 1". There is a "Delete" button at the bottom.

Ensure that the following are ticked, specifically **Analog set**.

The screenshot shows the AVAYA CCT Administration interface with the "Update Terminal" dialog open. The navigation tree on the left is identical to the previous screenshot. The "Terminals" node under "Passive" is highlighted with a red box.

The "Update Terminal" dialog has three tabs:

- Basic Properties**: Shows "Name: Line 4.0.10.0", "Type: Agent", and "Enabled:
- Provider-Specific Properties**: Contains checkboxes for "3-party conference (AO3)" (unchecked), "6-party conference (AO6)" (, highlighted with a red box), "Call transfer (TRN)" (, highlighted with a red box), "Call forward (CFW)" (, highlighted with a red box), and "Analog set" (, highlighted with a red box).
- Address assignments**: Shows two tables: "Available addresses" and "Assigned addresses".
 - "Available addresses": Addresses 3904, 3204, 3905, 3205, 3906.
 - "Assigned addresses": Addresses 3100, 113100.

6.6.2. Add CCT User

To add a new CCT User, right click on **Users** in the left window and select **Add new User**, as shown below.

The screenshot shows the AVAYA CCT Administration interface. On the left, there is a navigation tree with 'Users' selected. A context menu is open over 'Users', with 'Add new User' highlighted. The main panel displays a table titled 'CCT Users' containing four rows of data:

Login User Name	First Name	Last Name	Action
AACC63VMPG\TestCT1	CT1	Agent1	[checkbox]
AACC63VMPG\TestCT2	CT2	Agent2	[checkbox]
AACC63VMPG\wypadm	CADG	User	[checkbox]
AACC63VMPG\TestCT3	CT3	Agent3	[checkbox]

Below the table, a message says '4 CCT Users found, displaying 4 CCT Users. Page 1 / 1'. There are also navigation buttons and a 'Delete' button.

Enter the user details, note these should be the same as those configured in **Section 6.5**. Open **Address Assignments** and include the CDN that was created in **Section 5.2**.

Note: Any CDN that is used to route calls to Capita agents will also need to be added to the **Address Assignments**.

The screenshot shows the 'Update CCT User' dialog. On the left, there is a navigation tree with 'Users' selected. The main panel has two tabs: 'User Details' and 'Address Assignments'. The 'User Details' tab is active, showing fields for 'Login User Name' (AACC63VMPG\TestCT1), 'First Name' (CT1), and 'Last Name' (Agent1). These fields are highlighted with a red box. The 'Address Assignments' tab shows 'Available Resources' and 'Assigned Resources' tables. The 'Assigned Resources' table has one row selected, which is highlighted with a red box. The 'Available Resources' table contains the following data:

Address
5500
6103
6104
7000

The 'Assigned Resources' table contains the following data:

Address
6100
6101
6102

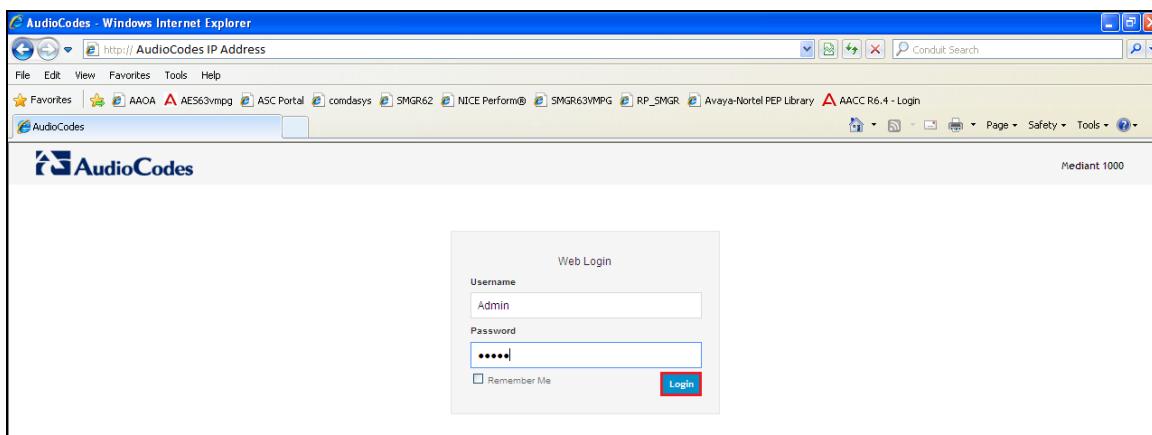

Scroll down and open **Terminal Assignments**. Ensure that the Lineside E1 TN's that were created in **Section 5.3** are associated with this user as shown below. Click on **Save** once this is completed.

The screenshot shows the AVAYA CCT Administration interface. On the left, there is a navigation bar with icons for Users, Workstations, Groups, and Providers. The main area is titled "CCT Administration". In the center, there is a section titled "Terminal Assignments". This section has two main parts: "Available Resources" and "Assigned Resources". The "Available Resources" part shows four entries under "Passive": Terminal, Line 96.0.0.4, Line 96.0.0.5, and Line 96.0.0.6. The "Assigned Resources" part shows three entries under "Passive": Terminal, Line 4.0.10.0, Line 4.0.10.1, and Line 4.0.10.2. The "Assigned Resources" section is highlighted with a red box. At the bottom of the screen, there are several other assignment tabs: Terminal Group Assignments, Address Group Assignments, and Agent Assignments. A red box also highlights the "Save" button at the bottom of the screen.

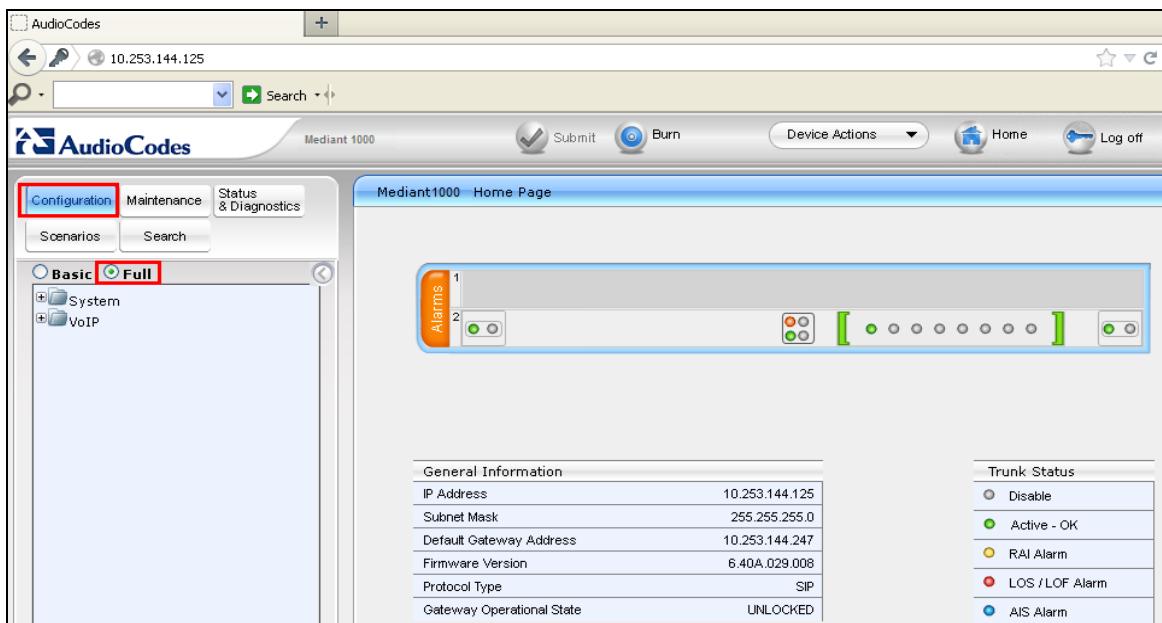

7. Configuration of AudioCodes Mediant 1000B Gateway

Although the AudioCodes gateway is a third-party product, it is a part of Capita's solution and must also be configured as a part of this solution. This box is responsible for the connection between the Avaya Lineside E1 card on the CS1000 and Capita's SIP stack on the DS3000 Server. Open a web browser and http to the AudioCodes IP address and enter the proper credentials into the authentication window as shown below and click **OK**.

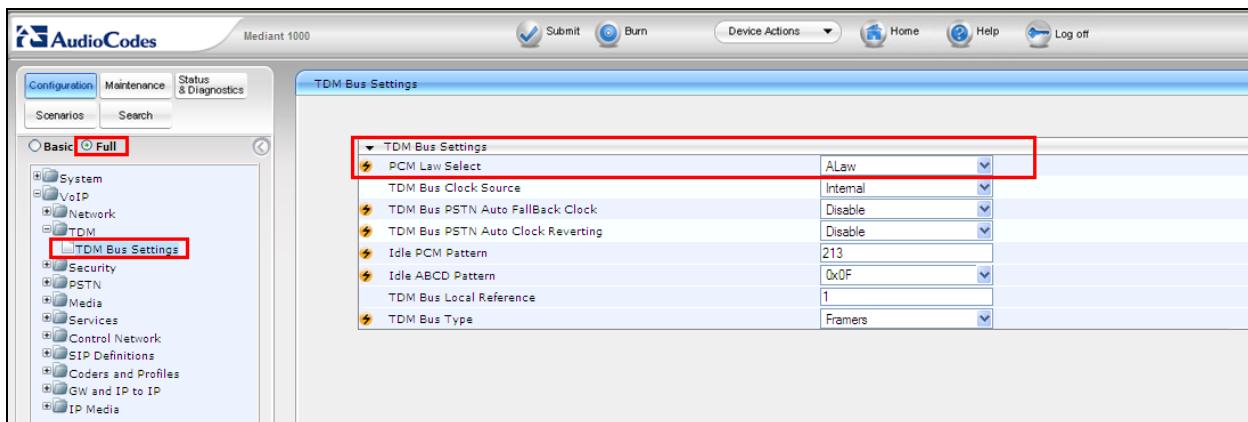

Note: The AudioCodes Mediant 1000B Gateway was configured with latest Avaya Aura® Offsite Agent (AAOA) and so the CAS/E1 configuration should be as defined in AAOA Installation and Commissioning Guide Release 6.2. See **Section 11** for more details on this document.

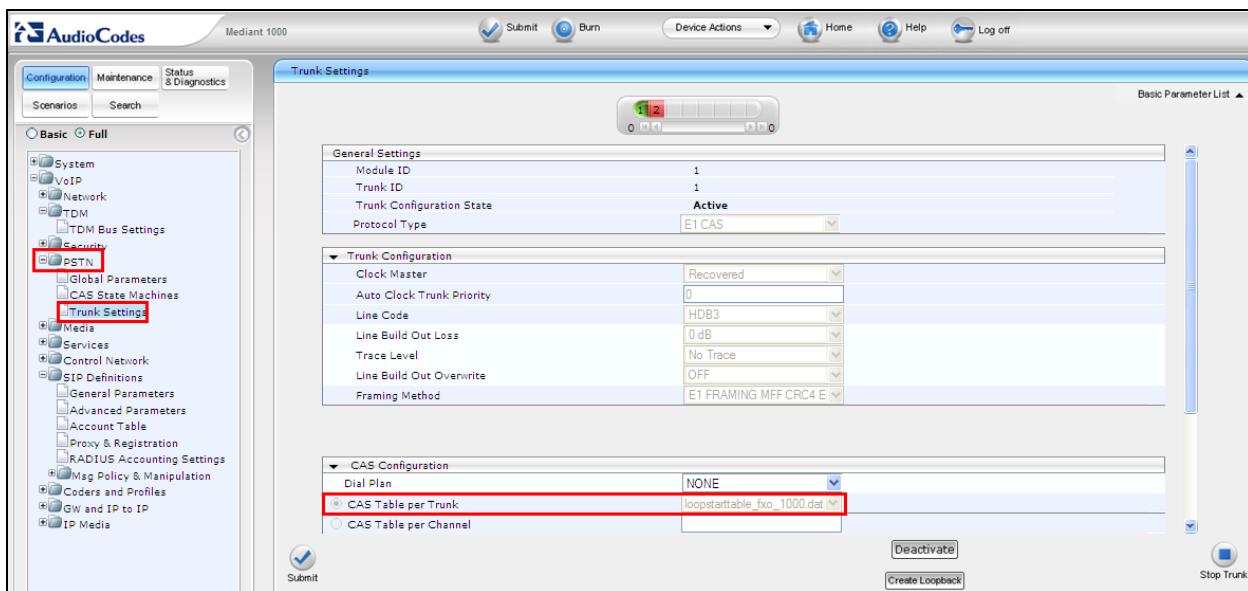

Once logged in correctly the following screen is shown. Select **Configuration** from the left window and select **Full**, highlighted below.

Select **VoIP → TDM → TDM Bus Settings** in the left window. Ensure that **PCM Law Select** is set to the correct setting (as this compliance testing was done in Europe, **ALaw** was selected). This will ensure that all traffic from/to DS3000 is processed as A-Law through the gateway

Navigate to **PSTN → Trunk Settings** and under **CAS Table per Trunk** note the **CAS Table per Trunk** is a file provided by Capita in order to connect properly to the CS1000 Lineside E1 allowing for 100ms call answer instead of the Avaya default 2 secs.

Select **VoIP → SIP Definitions → General Parameters** in the left window. Ensure that **SIP Transport Type** and **SIP UDP Local Port** are set to **UDP** and **5060**.

SIP General	
NAT IP Address	0.0.0
PRACK Mode	Supported
Channel Select Mode	Cyclic Ascending
Enable Early Media	Enable
183 Message Behavior	Progress
Session-Expires Time	0
Minimum Session-Expires	90
Session Expires Method	Re-INVITE
Asserted Identity Mode	Disabled
Fax Signaling Method	No Fax
Detect Fax on Answer Tone	Initiate T.38 on Preamble
SIP Transport Type	UDP
SIP UDP Local Port	5060
SIP TCP Local Port	5060
SIP TLS Local Port	5061
Enable SIPS	Disable
Enable TCP Connection Reuse	Enable
TCP Timeout	0
SIP Destination Port	5060

Select **VoIP → SIP Definitions → Advanced Parameters** in the left window. Ensure that **Disconnect on Broken Connection** is set to **No**.

General	
IP Security	Disable
Filter Calls to IP	Don't Filter
Enable Digit Delivery to Tel	Disable
Enable Digit Delivery to IP	Disable
PSTN Alert Timeout	180
QoS Statistics in SIP Release Call	Disable
Disconnect and Answer Supervision	
Disconnect on Broken Connection	No
Broken Connection Timeout [100 msec]	100
Disconnect Call on Silence Detection	No
Silence Detection Period [sec]	120
Silence Detection Method	Packets Count
Enable Fax Re-Routing	Disable
CDR and Debug	
CDR Server IP Address	
CDR Report Level	None
Misc. Parameters	

Select **VoIP → Coders and Profiles → Coders** in the left window. Ensure that **Coder Name** is set to the correct Law. As the compliance testing was done in Europe, this was set to **G.711A-Law**.

The screenshot shows the 'Coders Table' configuration screen. On the left, there's a navigation pane with tabs for Configuration, Maintenance, Status & Diagnostics, Scenarios, and Search. Below these are several sections with expandable tree views: Basic (selected), System, VoIP, Network, TDM, Security, PSTN, Signaling, Media, Services, Control Network, SIP Definitions, Coders And Profiles (selected), Coders Group Settings, Tel Profile Settings, IP Profile Settings, and GW and IP to IP. The main area displays a table titled 'Coders Table' with columns for Coder Name, Packetization Time, Rate, Payload Type, and Silence Suppression. A row for 'G.711A-law' is highlighted with a red box. The 'Rate' column for this row contains the value '64' with a dropdown arrow, and the 'Payload Type' column contains the value '8'.

Navigate to **VoIP** → **Coders and Profiles** → **Tel Profile Settings**, in the main window ensure that **Disconnect Call on Detection of Busy Tone** is set to **Disable**.

Tel Profile Settings

DTMF Volume (-31 to 0 dB)	-11
Input Gain (-32 to 31 dB)	0
Dial Plan Index	-1
Enable Digit Delivery	Disable
Echo Canceller	Enable
Flash Hook Period	700
Enable Early Media	Enable
Progress Indicator to IP	Not Configured
Disconnect Call on Detection of Busy Tone	Disable
Enable Voice Mail Delay	Enable
Time For Reorder Tone [sec]	255
Enable 911 PSAP	Disable
Enable AGC	Disable
EC NLP Mode	Adaptive NLP
Call Priority Mode	None
Swap Tel To IP Phone Numbers	Disable

Coder Group

Coder Group	Default Coder Group
-------------	---------------------

Select **VoIP** → **GW and IP to IP** → **Trunk Group** → **Trunk Group** from the left window. Enter the position ID for the first Lineside E1 Terminal Number (TN) into **Phone Number**. Note for compliance testing this is the same number created in **Section 5.3**. In each trunk group supported by the gateway set the Phone number for the first channel to the “Position ID” number of the Terminal Number associated with the channel. For example see **Section 5.3** were the Terminal Number 4-0-10-0 has Position ID **1113100** and number 3100. The position ID is the number configured into the DS3000 database to ensure consistency with the manner in which the terminal is identified to the Contact Center via the CCT interface.

Group Index	From Trunk	To Trunk	Channels	Phone Number	Trunk Group ID	Tel Profile ID
1	1	1	1-30	1113100	1	1
2						
3						
4						
5						
6						
7						
8						
9						
10						

Select **VoIP** → **GW and IP to IP** → **Routing** → **General Parameters** from the left window. Ensure that **Yes** is selected for **Replace Empty Destination with B-Channel Phone Number** in the main window. This ensures that the “to” address is valid when SIP calls reach the DS3000.

General Parameters	
Add Trunk Group ID as Prefix	No
Add Trunk ID as Prefix	No
Replace Empty Destination with B-channel Phone Number	Yes
Add NPI and TON to Called Number	No
Add NPI and TON to Calling Number	No
IP to Tel Remove Routing Table Prefix	No
Source IP Address Input	SIP Contact Header
Enable Alt Routing Tel to IP	Disable
Alt Routing Tel to IP Mode	Both
Alt Routing Tel to IP Connectivity Method	ICMP Ping
Alt Routing Tel to IP Keep Alive Time	60
Source Manipulation Mode	FROM & PAI (after manipulation)
Max Allowed Packet Loss for Alt Routing [%]	20
Max Allowed Delay for Alt Routing [msec]	250

Navigate to **VoIP → GW and IP to IP → Routing → Tel to IP Routing** (not shown). In the main window enter the destination phone number prefix (**Dest. Phone Prefix**) and the destination IP address of the device where this number is routed to (**Dest. IP Address**). Ensure that **UDP** is set for the **Transport Type** used with a **Port of 5060**.

Src. Trunk Group ID	Dest. Phone Prefix	Source Phone Prefix	->	Dest. IP Address	Port	Transport Type	Dest. IP Group ID	Dest. SRD	IP Profile ID	
1	*	*	->	10.253.160.206	5060	UDP	1	-1	1	Not Available
2			->			Not Configured	-1			
3			->			Not Configured	-1			
4			->			Not Configured	-1			
5			->			Not Configured	-1			
6			->			Not Configured	-1			
7			->			Not Configured	-1			
8			->			Not Configured	-1			
9			->			Not Configured	-1			
10			->			Not Configured	-1			

Select **VoIP → GW and IP to IP → Routing → IP to Trunk Group Routing** from the left window. Note that in the example below **6*** and **3*** are selected for outgoing calls. This ensures that all calls beginning with either 3 or 6 will go out the VoIP gateway. This will also ensure that the destination test@a.b.c.d is not routable to the trunk group.

Dest. Host Prefix	Source Host Prefix	Dest. Phone Prefix	Source Phone Prefix	Source IP Address	->	Trunk Group ID	IP Profile ID
1		6*			->	1	0
2		3*			->	1	0
3					->		
4					->		
5					->		
6					->		
7					->		
8					->		
9					->		
10					->		
11					->		

Select **VoIP** → **GW and IP to IP** → **Manipulations** → **Release Cause Mapping** from the left window. Ensure that **3** is entered for the **Q.850 Cause** and **500** is entered for the **SIP Response**. This will ensure that the DS3000 is able to check for Mediant Gateway availability. Once all the configuration is completed, click on **Submit** and then **Burn** at the top of the page.

The screenshot shows the AudioCodes configuration interface for a Mediant 2000 device. The left sidebar navigation tree is expanded to show the 'Full' configuration view, with the 'Manipulations' section selected. Under 'Manipulations', the 'Release Cause Mapping' option is highlighted with a red box. At the top of the main window, there are two buttons: 'Submit' and 'Burn', also both highlighted with red boxes. The main content area displays two tables for 'Release Cause Mapping'. The top table is titled 'Release Cause Mapping from ISDN to SIP' and has columns for 'Q.850 Cause' and 'SIP Response'. The entry for row 1 is '3' under 'Q.850 Cause' and '500' under 'SIP Response'. The bottom table is titled 'Release Cause Mapping from SIP to ISDN' and has columns for 'SIP Response' and 'Q.850 Cause'. The entry for row 1 is '500' under 'SIP Response' and '3' under 'Q.850 Cause'. Both tables have rows numbered 1 through 12.

Release Cause Mapping from ISDN to SIP

8. Configure Capita DS3000 Application

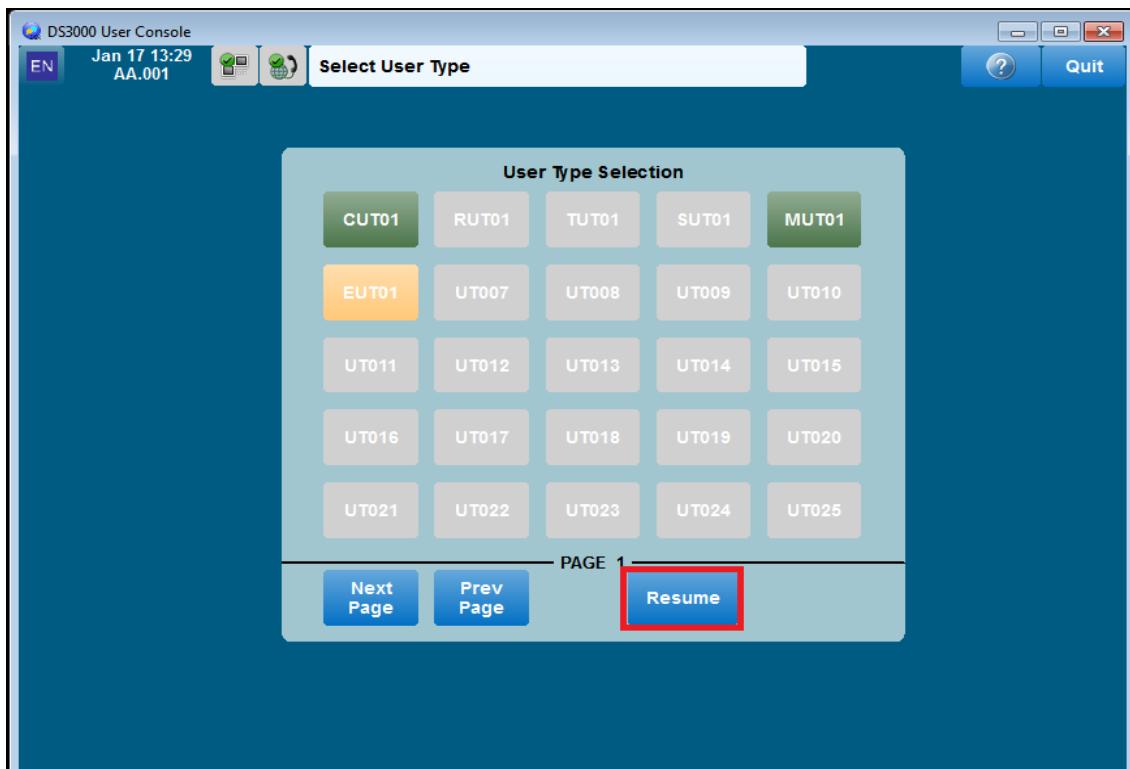

The following sections describe the step required to configure the DS3000 application in order to connect successfully with the Lineside E1 card on the CS1000.

8.1. Configure the DS3000 extension numbers

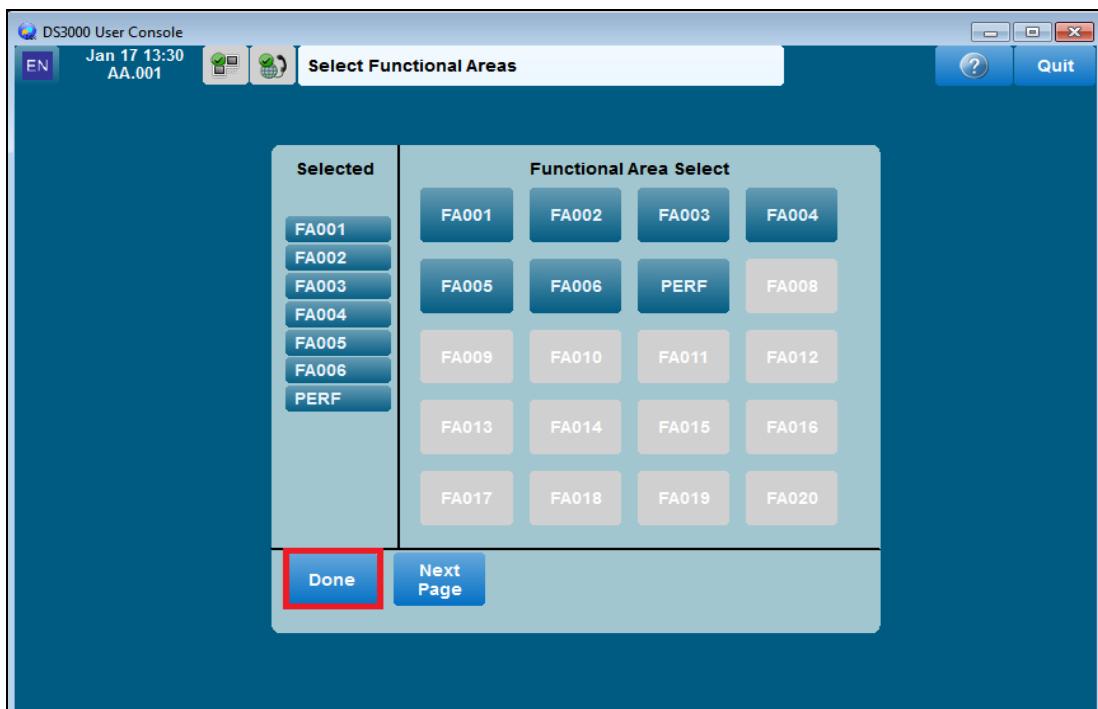

Open the **DS3000 Client** on the DS3000 Client machine. Enter the correct credentials on the **LOGON PAD**.

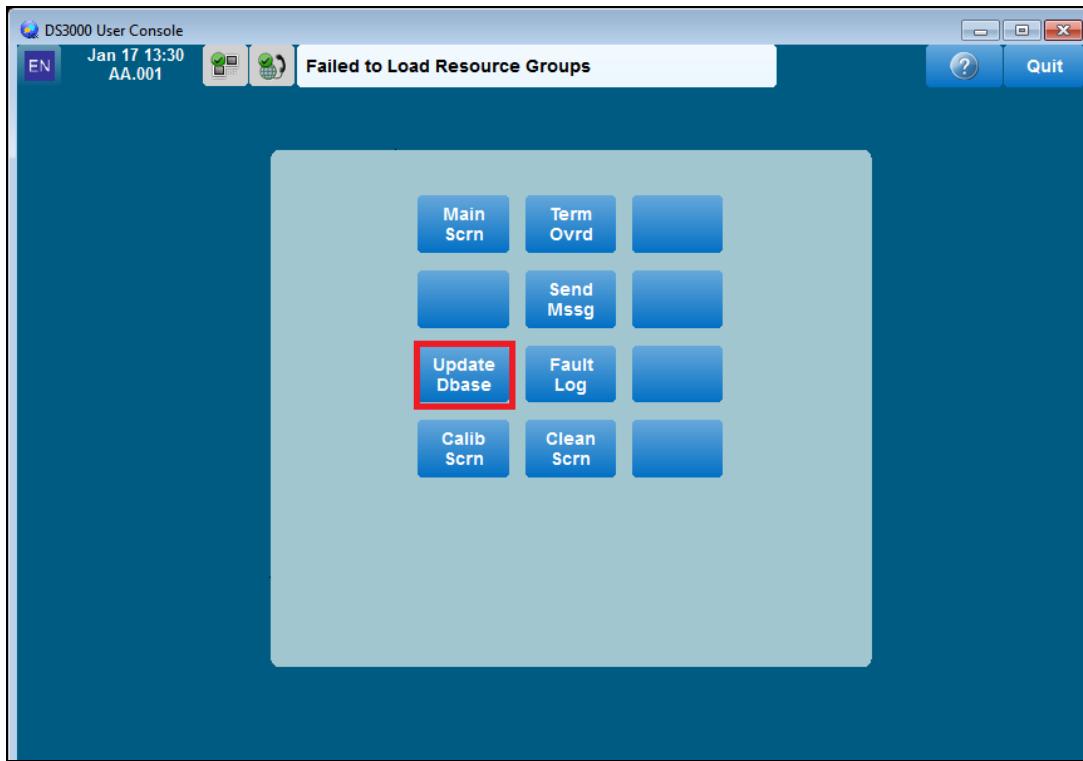

Click on **Resume** at the bottom of the screen as highlighted.

Select **Done** at the bottom of the screen as highlighted.

Click on the **UpdateDbase** button highlighted.

8.1.1. Configure ACD Extensions

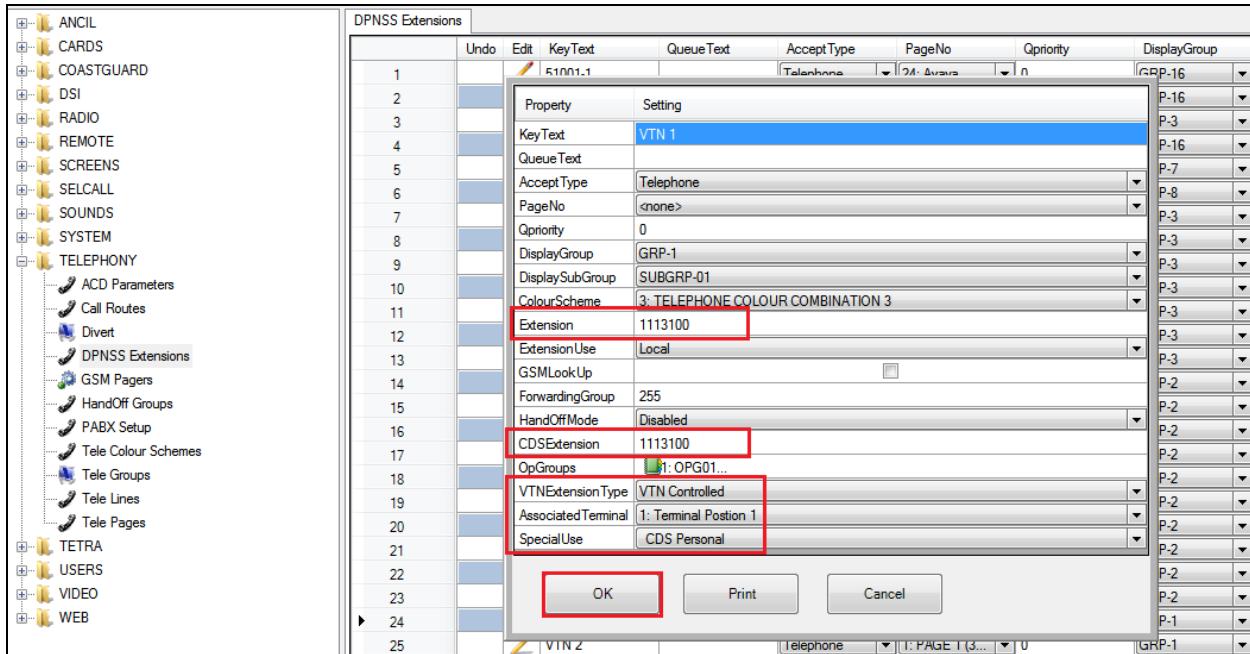

Note that the ACD extensions are already populated in the database and these are configured by selecting the icon highlighted below.

		DPNSS Extensions		User Profiles	Undo	Edit	KeyText	QueueText	AcceptType	PageNo	Qpriority	DisplayGroup	DisplaySubGroup	ColourS
1		51001-1						Telephone	▼ 24: Avaya	▼ 0		GRP-16	▼ SUBGRP-01	▼ 1: TELE
2		51002-2						Telephone	▼ 24: Avaya	▼ 0		GRP-16	▼ SUBGRP-01	▼ 1: TELE

23		50009						Telephone	▼ 1: PAGE 1 (3...)	▼ 0		GRP-2	▼ SUBGRP-01	▼ 1: TELE
24		VTN 1						Telephone	▼ <none>	▼ 0		GRP-1	▼ SUBGRP-01	▼ 3: TELE
25		VTN 2						Telephone	▼ 1: PAGE 1 (3...)	▼ 0		GRP-1	▼ SUBGRP-01	▼ 3: TELE
26		VTN 3						Telephone	▼ 2: PAGE 2 (3...)	▼ 0		GRP-1	▼ SUBGRP-01	▼ 1: TELE
27		VTN 4						Telephone	▼ 2: PAGE 2 (3...)	▼ 0		GRP-1	▼ SUBGRP-01	▼ 1: TELE

Once selected the window below opens, ensure that the following are selected:

- Position ID (1113100) configured in **Section 5.3** for the **Extension** and **CDSExtension**
- **VTN Controlled** for **VTNExtensionType**
- **Terminal Position n** for **AssociatedTerminal** where special use below is CDS Personal (n is DS3000 operator console number in range 1 to 245)
- **CDS Personal** or **CDS Pool** as required for **SpecialUse**

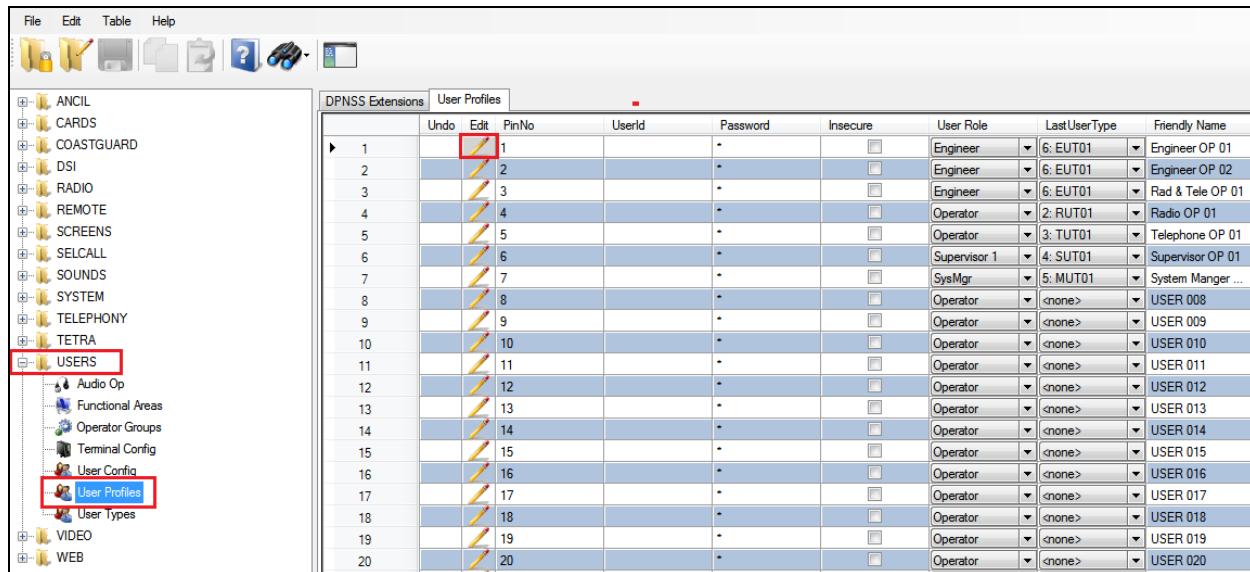

Click on **OK** once completed.

8.1.2. Configure ACD Users

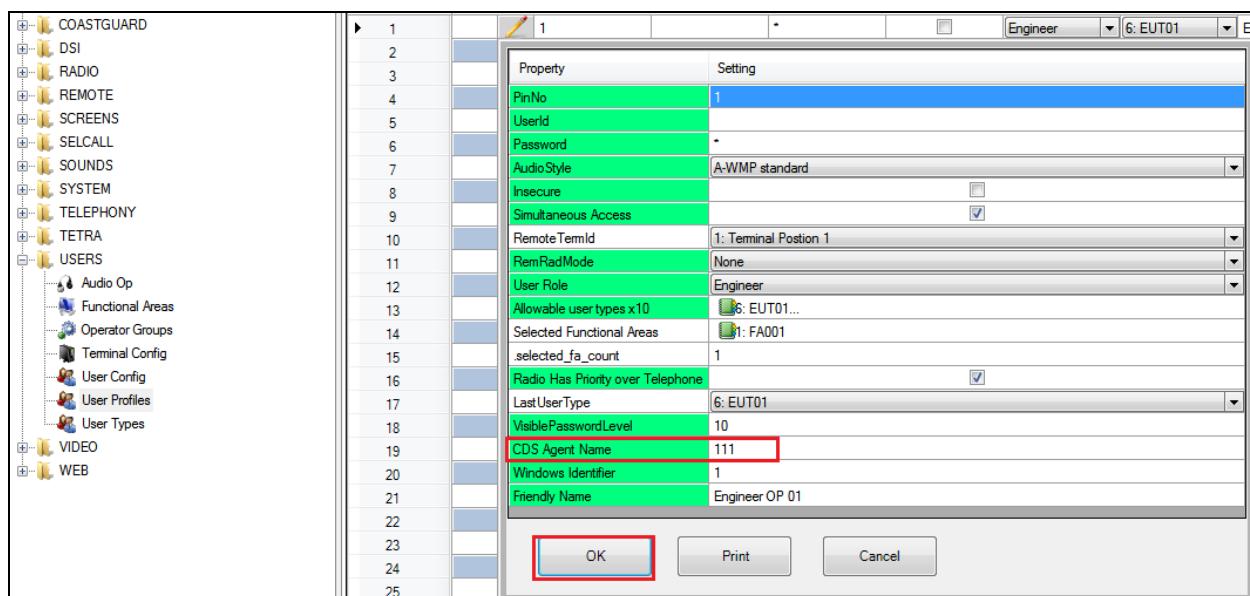

Select **USERS → User Profiles** in the left window and select user 1 by clicking the icon highlighted below.

Note: The Agent Login ID is formed by concatenating two pieces of information so that each user can have different ACD agent profiles dependant on the operational role. It is recommended that customers consult with Capita for explanation of configuration options available to assist with definition of Contact Center and DS3000 data configuration.

	Undo	Edit	PinNo	UserId	Password	Insecure	User Role	Last UserType	Friendly Name
1			1		*	<input type="checkbox"/>	Engineer	6: EUT01	Engineer OP 01

19			19		*	<input type="checkbox"/>	Operator	<none>	USER 019
20			20		*	<input type="checkbox"/>	Operator	<none>	USER 020

Note the **CDS Agent Name** is 111 which correspond to 9(111) which is the configured Agent Login ID from **Section 6.2**. Click on **OK** once completed.

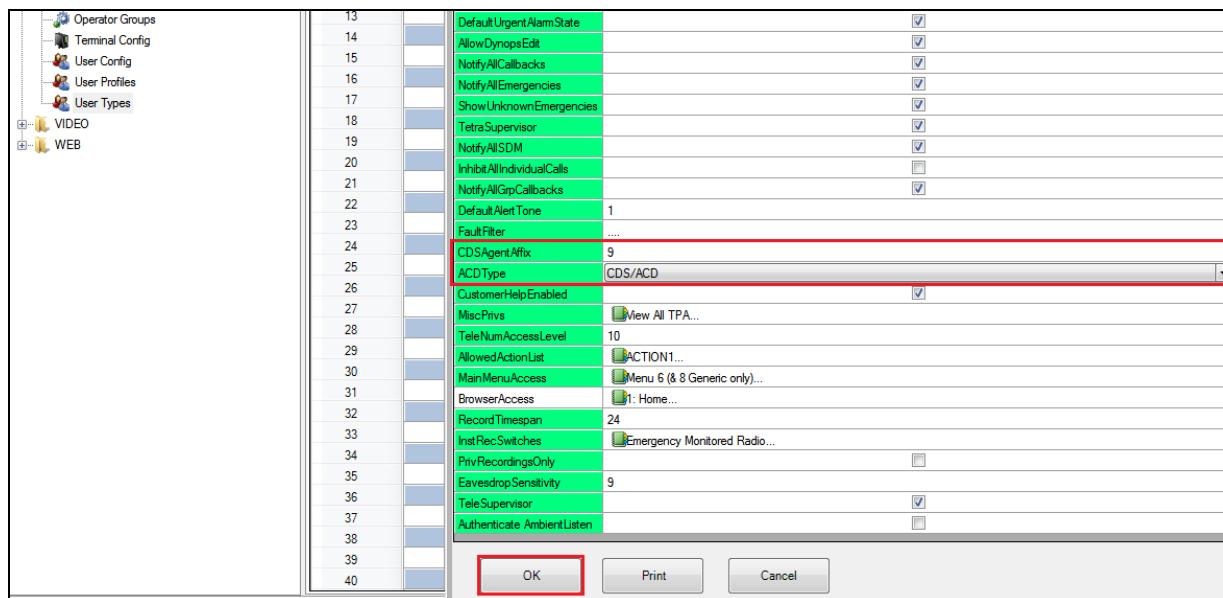

Property	Setting
PinNo	1
UserId	
Password	*
AudioStyle	A-WMP standard
Insecure	<input type="checkbox"/>
Simultaneous Access	<input checked="" type="checkbox"/>
RemoteTermId	1: Terminal Position 1
RemRadMode	None
User Role	Engineer
Allowable user types x10	6: EUT01...
Selected Functional Areas	1: FA001
selected_fa_count	1
Radio Has Priority over Telephone	<input checked="" type="checkbox"/>
Last UserType	6: EUT01
VisiblePasswordLevel	10
CDS Agent Name	111
Windows Identifier	1
Friendly Name	Engineer OP 01

Select **USERS** → **User Types** from the left window. The user type used in the compliance test was **EUT01**. This user type was already in the database but in order to configure it click on the icon highlighted below.

The resulting window is opened, scroll down to the bottom and note that **CDSAgentAffix** is set to **9** which corresponds to the (9)111 agent login ID configured in **Section 6.2**. Click on **OK** once completed.

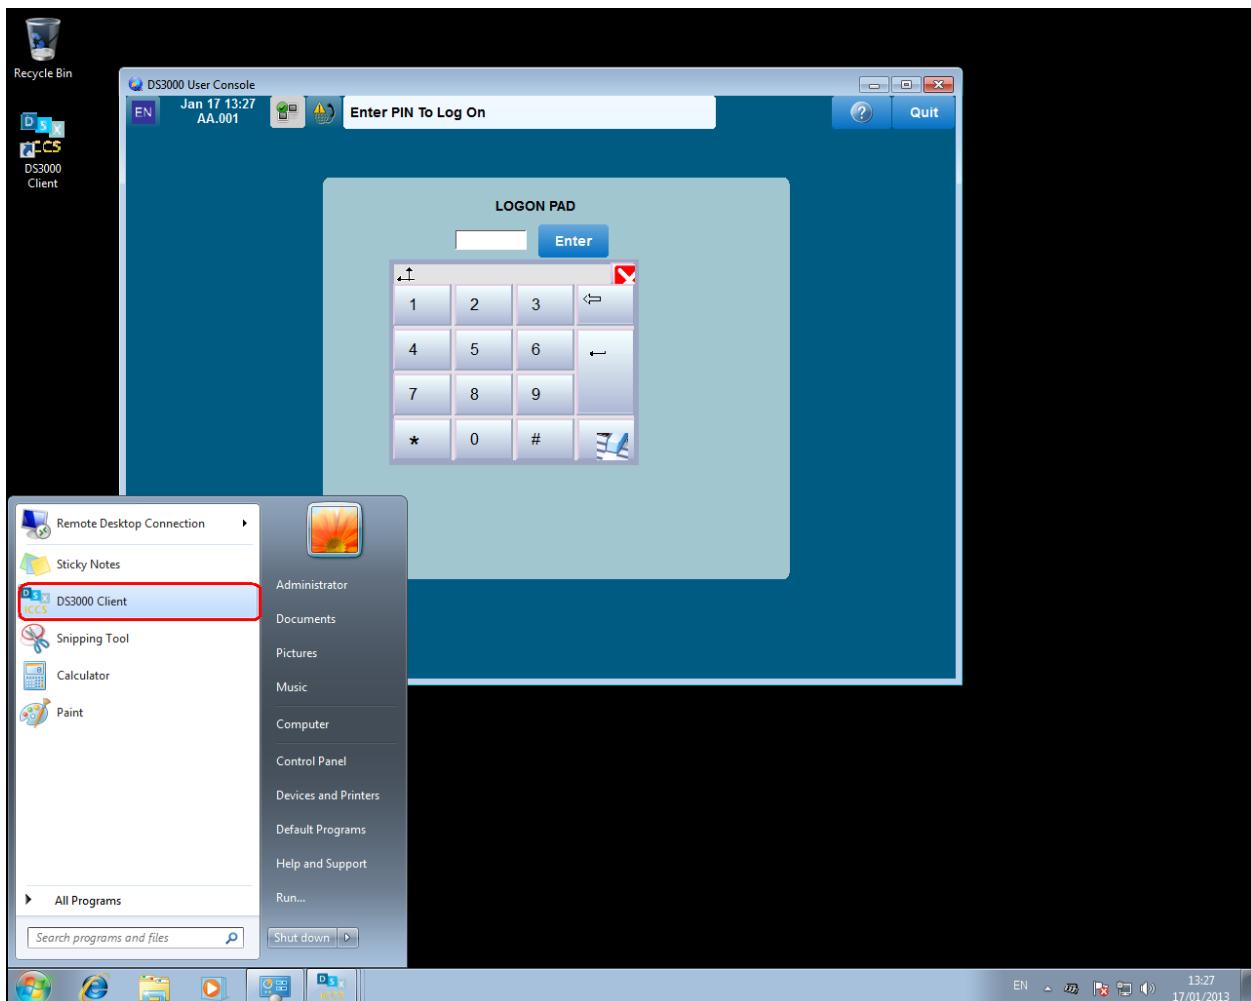

9. Verification Steps

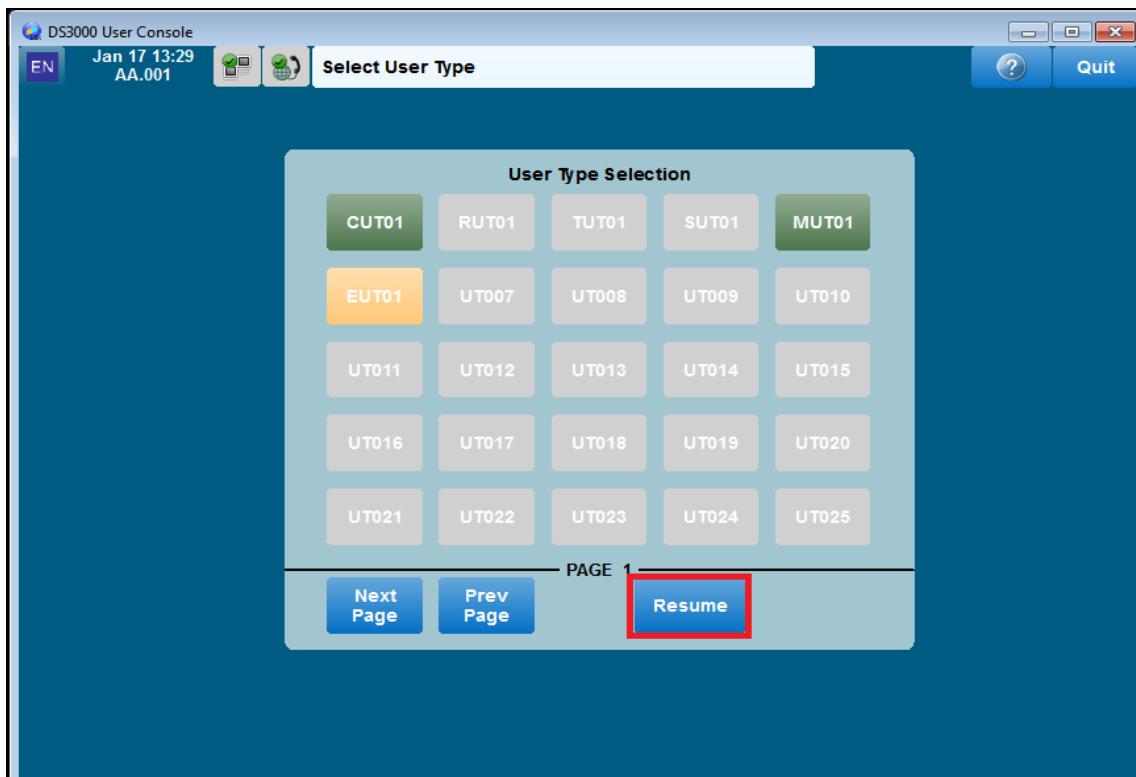

The following step can be taken to ensure that all connections between Capita's DS3000 Solution and the Avaya Solution are configured correctly. Make a call to the CDN associated with the DS3000 and verify that the caller can be heard or call the extension (DN) of the Lineside E1 channel directly such as 3100 in this example.

9.1. Verify that calls can be made to the DS3000

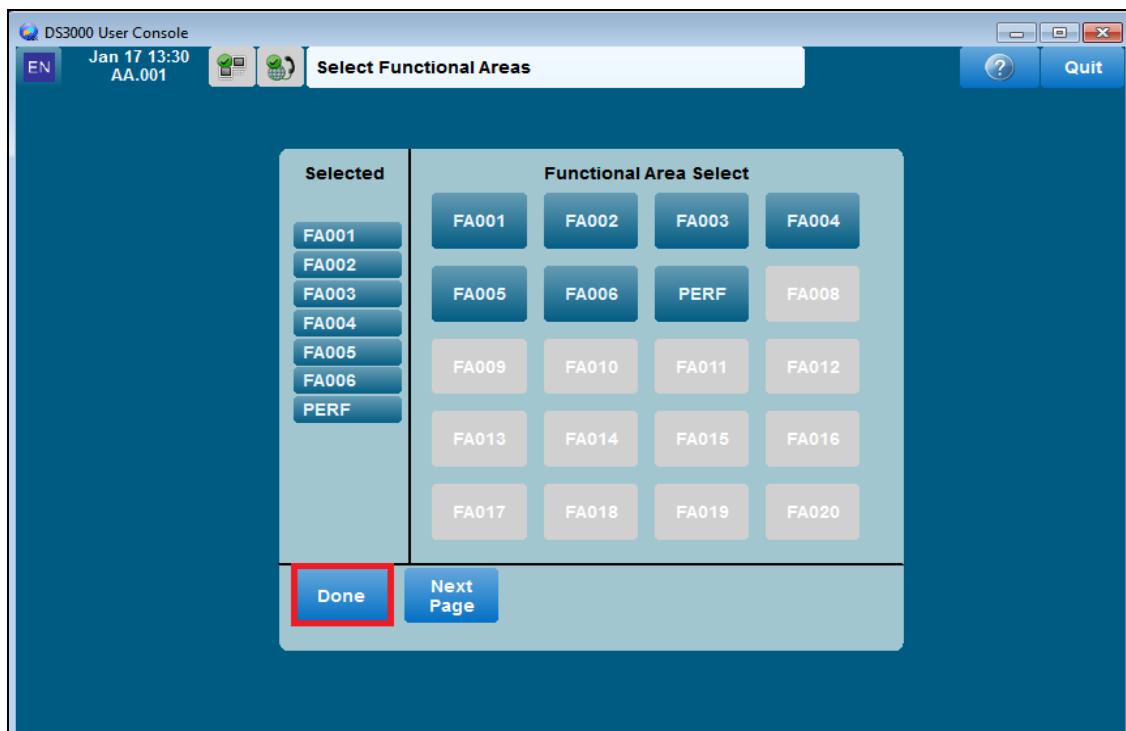

Open the **DS3000 Client** on the DS3000 Client machine. Enter the correct credentials on the **LOGON PAD**.

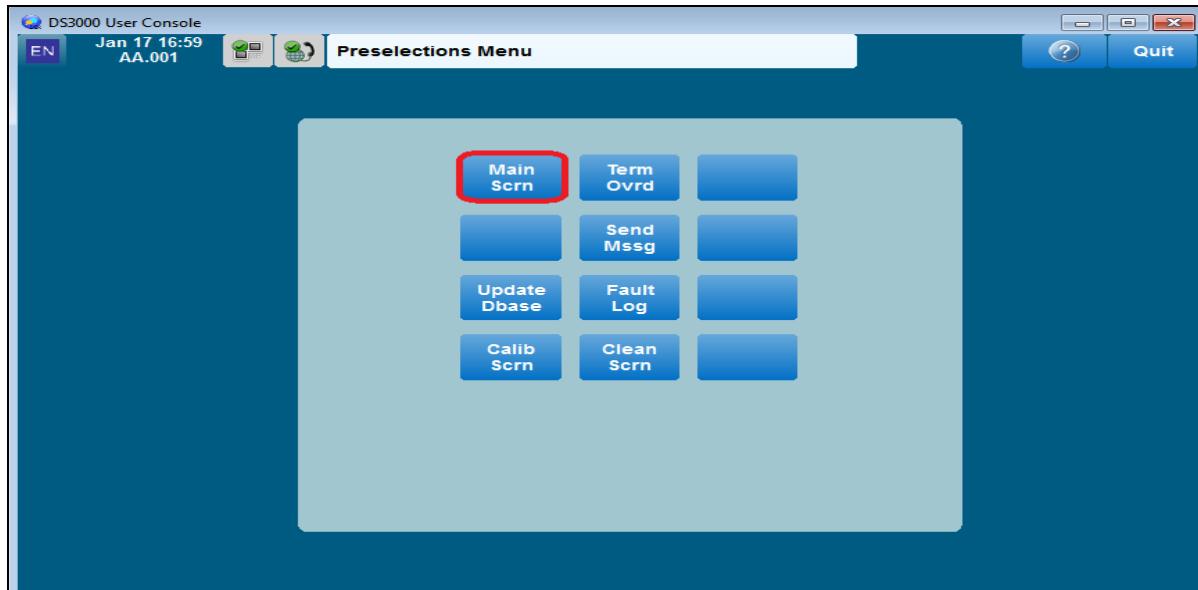

Click on **Resume** at the bottom of the screen as highlighted.

Select **Done** at the bottom of the screen as highlighted.

Click on the **Main Scrn** button highlighted below.

Once a call is presented to the Lineside E1 the following screen should appear. Click on the **VTN 1** button highlighted to take the call. Please note that under ACD operation calls will be auto answered and the agent does not need to touch a key. In this example a direct call was made from **3206** to 3100 to test the Lineside E1 line 3100.

Once the call is taken the following screen appears showing that caller **3206** called.

10. Conclusion

These Application Notes describe the configuration steps required for DS3000 from Capita Secure Information Solutions to successfully interoperate with Avaya Aura® Contact Center R7.0.1 and Avaya Communication Server 1000 R7.6 using a Lineside E1 connection. Please refer to **Section 2.2** for test results and observations.
